

FHWA FREIGHT FLUIDITY PROGRAM

Chandra Bondzie, HOFM/OST

U.S. Department of Transportation
Federal Highway Administration

FREIGHT FLUIDITY PROGRAM

U.S. Department
of Transportation
**Federal Highway
Administration**

- Fluidity is a monitoring program for freight transportation performance in support of the competitiveness and vitality of the nation's supply chains
- Captures for the first time the key performance indicators of travel time, travel time reliability, and customer price for multimodal freight transportation by stage and end-to-end across representative travel lanes in a cross-section of American industry
- Combines two types of data in a robust software platform:
 - Supply chain staging patterns by location and mode (from industry partners)
 - Quarterly performance metrics by lane (from public and commercial sources)
- Lane-level metrics by logistical stage and mode sum to total end-to-end supply chain outcomes, which are the bottom line for competitive industrial performance: actual data, not a model

FLUIDITY BRIDGES AND LEVERAGES EXISTING DATA PROGRAMS

U.S. Department
of Transportation
**Federal Highway
Administration**

Economic Data

“What and how much freight is moving, and where?”

Sources:

Freight Analysis Framework, Bureau of Economic Analysis, Carload Waybill Sample

Freight Fluidity Program

“Freight system performance from users’ perspective”

Sources:

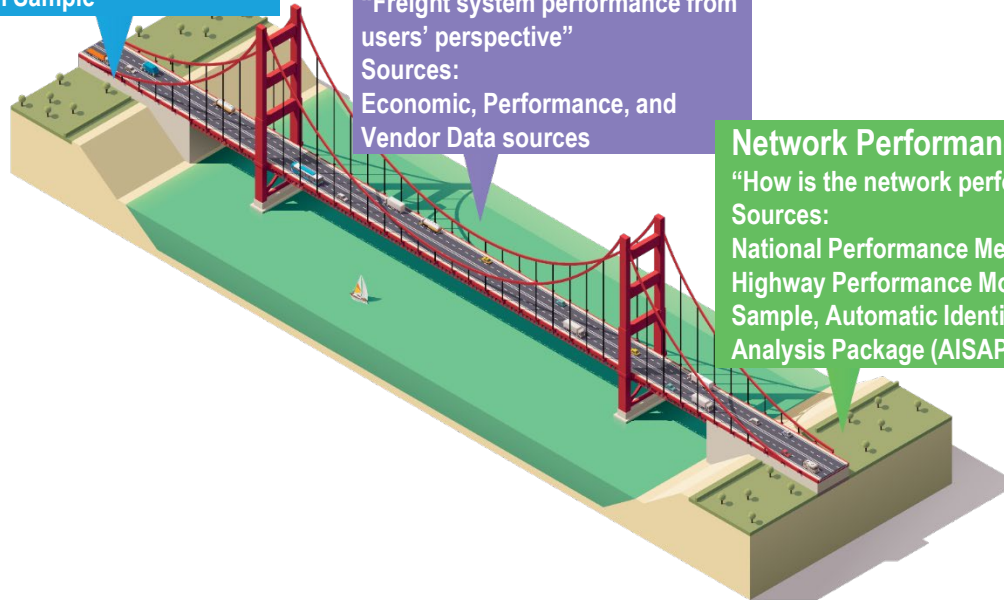

Economic, Performance, and Vendor Data sources

Network Performance Data

“How is the network performing?”

Sources:

National Performance Measures Research Dataset (NPMRDS), Highway Performance Monitoring System, Carload Waybill Sample, Automatic Identification System Analysis Package (AISAP)

Fluidity is a bridge between economic and network data, showing how freight flows and facility measures merge into effects on multi-stage, multimodal industrial performance

BACKGROUND

U.S. Department
of Transportation

**Federal Highway
Administration**

- Builds on prior FHWA funded research conducted with I-95 Corridor Coalition
 - Question: can we measure supply chain performance across modes and across jurisdictions?
 - Outcome: established that measures and metrics are common across supply chains and can be scaled for national, multistate and metropolitan analysis
- The Fluidity Program is a full feasibility test across multiple modes, 30 industries, and over 400 origin-destination moves by truck, water, rail carload and rail intermodal, over four quarters of data

THE PRODUCT

U.S. Department
of Transportation
**Federal Highway
Administration**

- A new USDOT-owned database of information, with a visualization and mapping tool to record and report three types of performance metrics across multiple modes, scalable to future expansion and enhancement
- A major advance beyond highway-only metrics, allowing us to measure performance from the supply chain perspective and identify critical flows/connections, bottlenecks and improvement opportunities over the larger multimodal system

Current System Performance Capture (Typical)	Freight Fluidity Performance Capture
Travel Time	Travel Time (Industry/Supply Chain)
Travel Time Reliability	Travel Time Reliability (Industry/Supply Chain)
Cost of Wasted Time and Fuel	Transportation Cost (Market Price, Industry/Supply Chain)
Highway Only	Multimodal: Highway, Rail (IMX & Carload), Water

DATA – SUPPLY CHAIN DEFINITION

U.S. Department
of Transportation

**Federal Highway
Administration**

- 30 major US companies identified to represent a broad cross-spectrum of industry sectors, commodities, modes
 - 24 at national level, 6 regionally focused on NY/NJ and Chicago areas
 - Through interviews, industries shared “wiring diagrams” of their most critical supply chains, without revealing other business-sensitive information

Contribution to national GDP and projected growth among freight-dependent industries

Geographic coverage of US: regions, urban centers, rural areas, gateways, corridors, direction of travel

Contribution to regional GDP and projected growth among freight-dependent industries

Industry importance to resilience of other supply chains and of population

Industry importance in US trade

Modal and travel distance diversity

DATA – PERFORMANCE METRICS

U.S. Department
of Transportation
**Federal Highway
Administration**

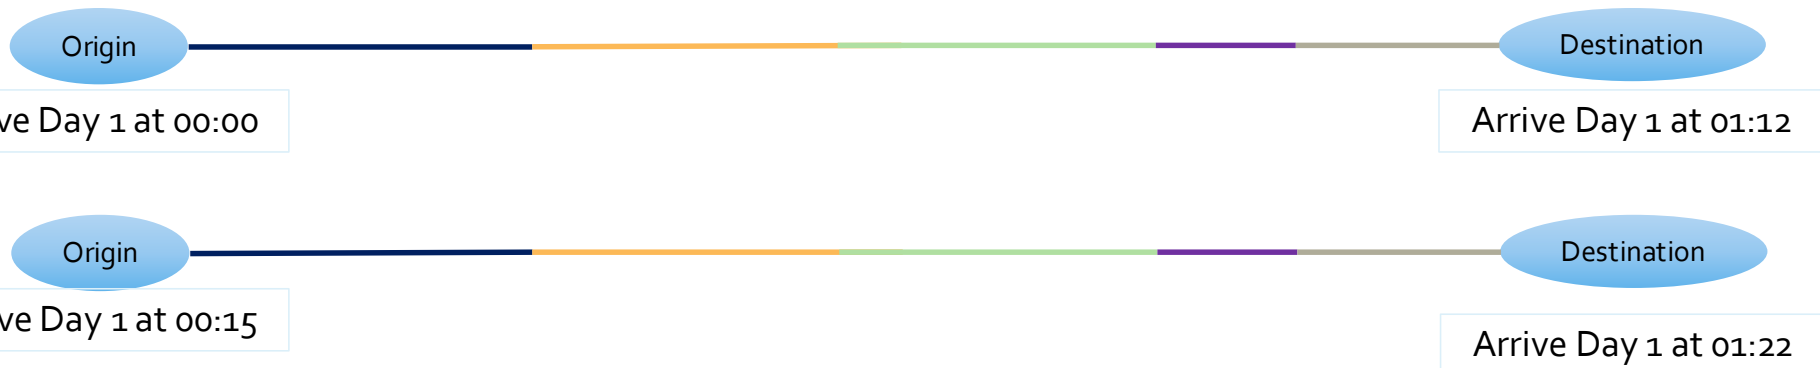

- Customer prices
 - Truck and Rail Intermodal price data purchased from commercial aggregator
 - Rail Carload price data estimated by consultant team from STB Waybill
- Travel time (with Reliability measured as variations in travel time)
 - Water data provided by US Army Corps of Engineers AIS, with detailed analysis by the Bureau of Transportation Statistics – 25%, 50%, 75% percentiles
 - Rail carload and intermodal travel time data purchased from commercial aggregator – 50% and 95% percentiles -- some routes not available
 - Truck data developed through analysis of FHWA's NPMRDS
 - FHWA acquired first NPMRDS in July 2013, second version in April 2017; see https://ops.fhwa.dot.gov/perf_measurement/index.htm
 - Aggregates observed travel times from vehicle-based probes on Traffic Message Channels (TMCs) over five minute intervals, continuously, for freight and passenger vehicles

DATA – NPMRDS ANALYSIS

U.S. Department
of Transportation
**Federal Highway
Administration**

1. Line up road segments (TMCs) from origin to destination zip codes using NPMRDS roadway inventory and fastest paths
2. Using this virtual routing, calculate travel times for a trip starting every 15 minutes throughout a quarter (“traces”) based on TMC speed data
3. Record the time it takes to travel the route for each starting time and day in the quarter; calculate free flow, mean, 50%, 95%, and 99% travel times averaged over the full quarter
4. Limitations: not all routes or segments of interest covered by NPMRDS, other sources of speed data would be needed to fill in gaps; but the great majority of truck route mileage is covered

SOFTWARE PLATFORMS

U.S. Department
of Transportation

**Federal Highway
Administration**

- Two integrated platforms, both from existing suite of FHWA freight measurement tools:
 - Excel database and Tableau data analysis/visualization
 - FHWA/HOFM GIS data visualization tools, fed from database
- The software platforms meet key criteria:
 - Ability to hold and process large data sets in time series
 - Accessibility of data to internal and external users, via export into common formats such as spreadsheet software, and directly on the platform without purchase of special tools.
 - Ability to restrict access to certain types or levels of data
 - Varied and high quality graphical and cartographical displays
 - Stability as dependable, tested tools
- Open-ended to support additional industries, travel lanes, modal details, data periods, performance calculations – maintainable, expandable

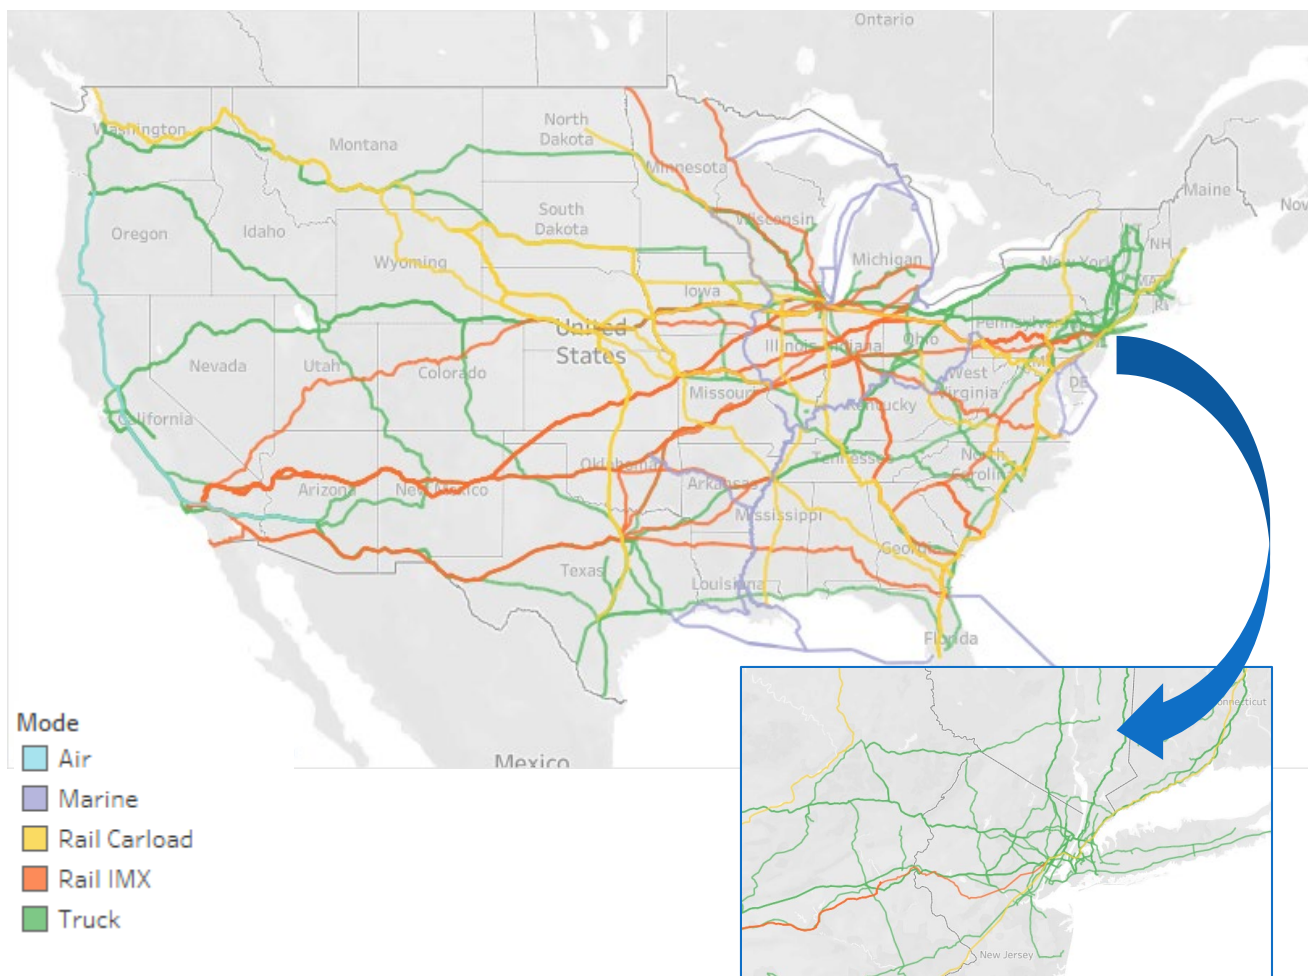

MODE/GEOGRAPHY COVERAGE

U.S. Department of
Transportation

Federal Highway
Administration

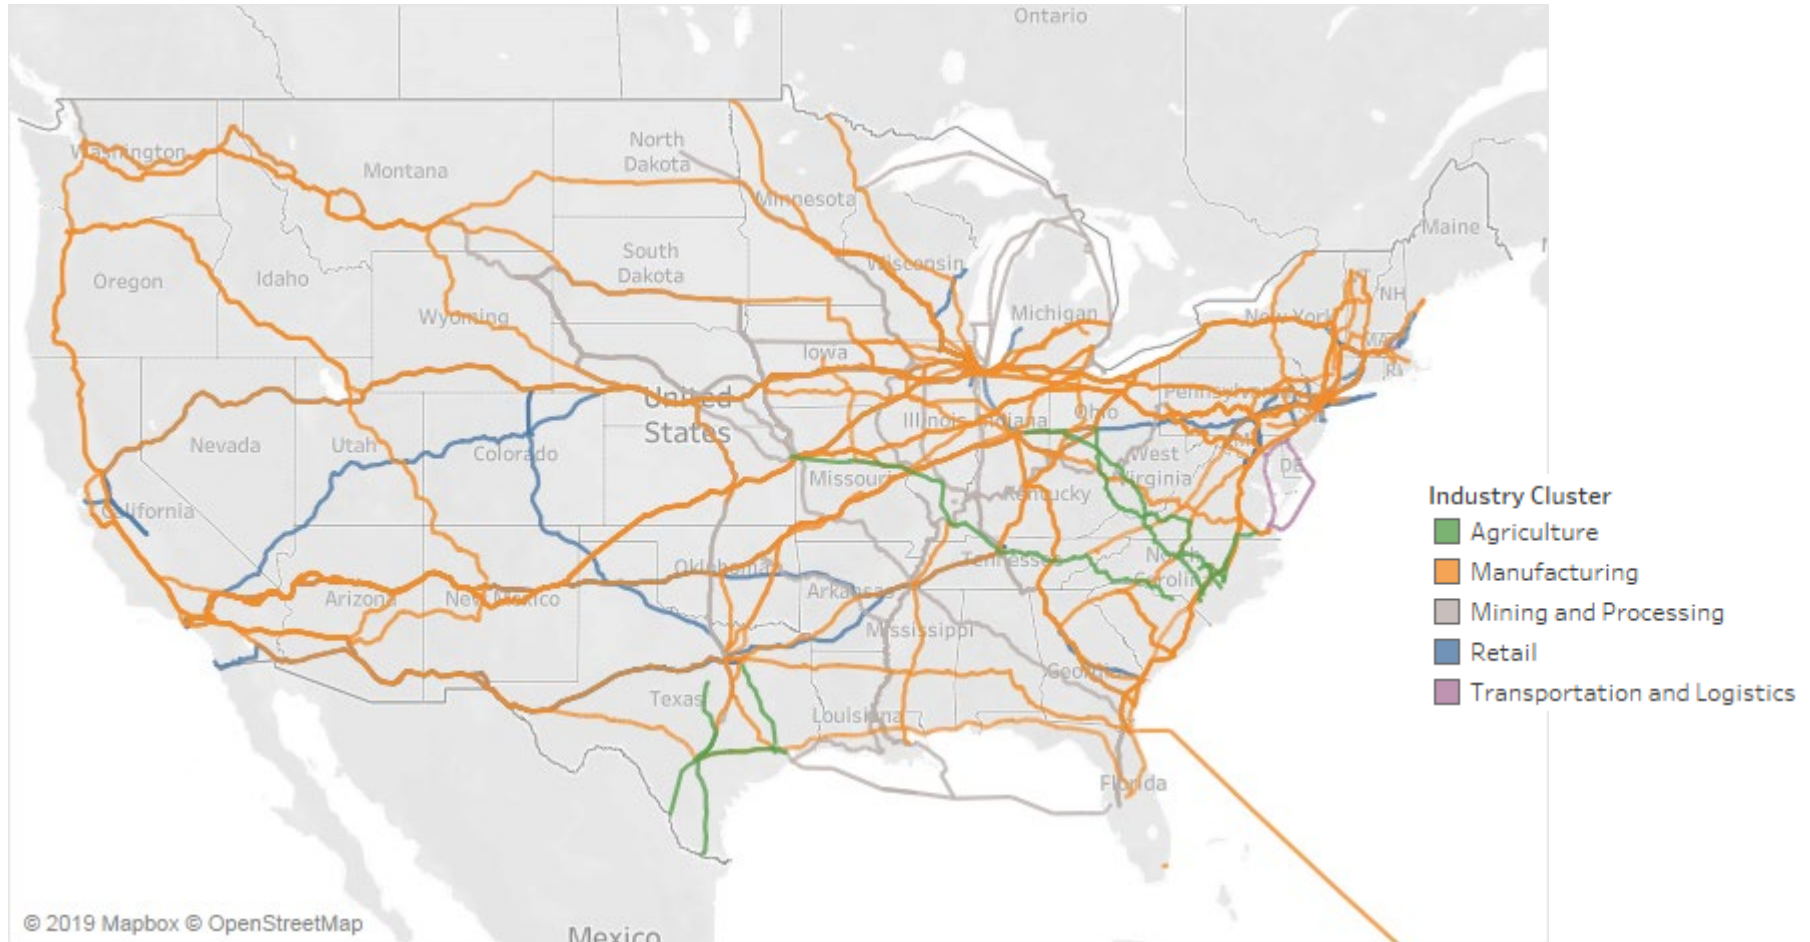

- Each data record has an assigned path – NHS segment, rail network, waterway network -- allows any data attribute or value to be displayed at a path level
- Captures moves in almost every state, most major metro areas, much of the national highway freight network -- even from the limited 30 industry sample

➔ 417 Mapped Moves: Truck (336), Rail IMX (28), Rail Carload (20), Water (28), Air (1)

INDUSTRY COVERAGE

U.S. Department of
Transportation
**Federal Highway
Administration**

➔ 30 Industries: 14 Manufacturing, 8 Retail, 4 Mining, 2 Agricultural Production (in addition to food manufacturing), 2 Transportation/Logistics

SYSTEM-LEVEL ANALYSIS

U.S. Department of
Transportation

Federal Highway
Administration

Dashboard #1 -- Travel Time

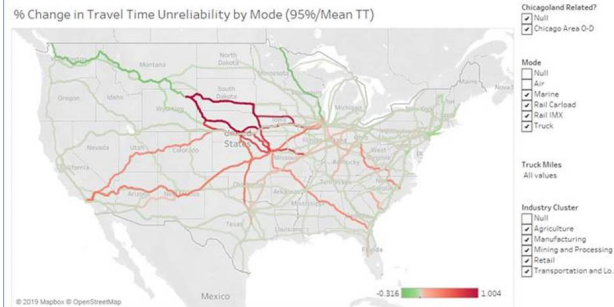

Mean Travel Time by Mode

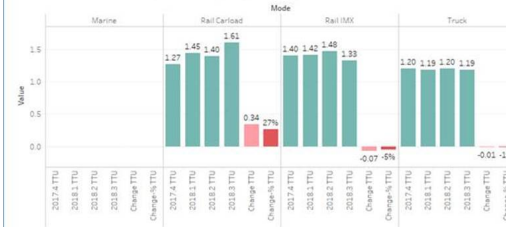

Mean Travel Time by Industry Cluster

Dashboard #2 -- Travel Time Unreliability

Travel Time Unreliability by Mode (95%/Mean TT)

Travel Time Unreliability by Industry Cluster (95%/Mean TT)

Dashboard #3 -- Travel Cost

Travel Cost by Mode

Travel Cost by Industry Cluster

Dashboards for Travel Time, Unreliability, and Price by path, mode, and industry cluster; maps showing each quarter or changes; charts showing quarterly data; can filter by mode, industry, geography, etc.

SUPPLY CHAIN-LEVEL ANALYSIS

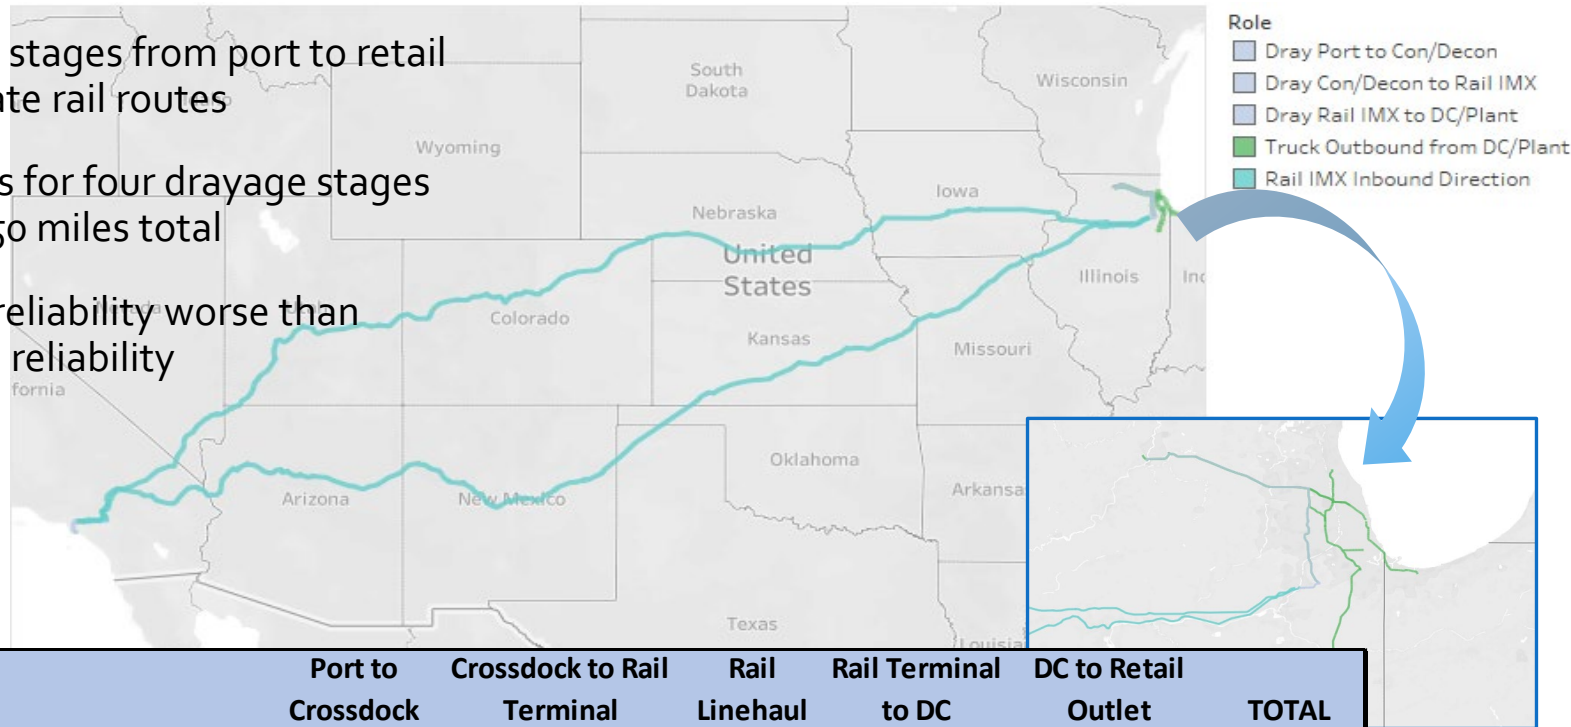

U.S. Department of
Transportation

Federal Highway
Administration

Industry Example: Home Improvement

- Multimodal; 5 stages from port to retail outlet; alternate rail routes
- Half the cost is for four drayage stages of less than 250 miles total
- Import stage reliability worse than delivery stage reliability

	Port to Crossdock Truck	Crossdock to Rail Terminal Truck	Rail Linehaul Rail IMX	Rail Terminal to DC Truck	DC to Retail Outlet Truck	TOTAL
Miles	6	25	2200	109	103	2443
2017.4 Total Cost per Unit (\$)	489	526	2616	699	692	5022
2017.4 Linehaul Cost per Unit (\$)	487	518	2298	659	653	4615
2017.4 Fuel Cost per Unit (\$)	2	8	319	40	38	407
2017.4 Mean Truck Travel Time (hrs)	0.3	0.7		1.9	1.8	4.7
2017.4 Cross Modal Reliability (95%/50%)	1.5	1.6		1.1	1.3	

STATEWIDE ANALYSIS

U.S. Department of
Transportation

Federal Highway
Administration

State Example: Missouri

- Truck, rail intermodal, rail carload, and water flows
- Inbound, outbound, through
- Ability to track multi-state performance metrics for a limited sample of industries
- Opportunity to build on national platform to increase coverage for industries and moves most significant to each state
- Could help states better fulfill FAST-Act mandate to address multi-state freight planning factors

PRODUCT VALUE

U.S. Department
of Transportation

**Federal Highway
Administration**

- **Public Agencies (Federal, State, MPO/Regional)**
 - Monitor Key Performance Indicators (KPIs), comparable to how freight system users monitor themselves, capturing critical factors for industry competitiveness
 - Supports economic development strategies by identifying transportation connections relied on by essential industries
 - Supports timely response to questions about supply chain disruptions, resiliency and redundancy, alternative service options for major industries, last mile connectivity, and other freight transportation issues
 - Provides working tool that complements and combines with others in the public agency toolbox
 - National platform supplies foundation for state and local agencies to build upon
- **Private Sector**
 - Potential resource to provide benchmarking data to smaller/rural industries without access to this information

NEXT STEPS

U.S. Department
of Transportation
**Federal Highway
Administration**

- Complete data validation and documentation
- FHWA launches Freight Fluidity Supply Chain Monitoring tool as part of suite of Freight Data Tools in 2020
 - Provides report on Project and User Guide on Data Tool
- Conduct continued outreach to state DOTs, MPOs and others to create awareness of tool and capabilities
 - Through TRB, AASHTO, AMPO event presentations in 2020
- FHWA HOFM examines adding additional capabilities in tool
 - Additional quarters, industry sectors, applications
