TIMMONS GROUP
GEOSPATIAL SOLUTIONS

SPEED & TRAVEL TIME SOLUTIONS

Our solution puts quality first. We engage the member in the full life cycle of live speed data, starting with advanced preparation and finishing with two different archives for review and analysis.

MEMBER APPLICATIONS

All Real-Time Traffic feeds include specialized options that contribute additional information and operational efficiency. Our team ensures each member chooses and deploys the appropriate feed.

RITIS STORAGE APPLICATION

Users can filter and download historic TMC-based speed data from a 12-month rolling archive at one-minute intervals through the RITIS-Probe Data Analytics Suite Massive Data Downloader.

TOMTOM TRAFFIC STATS

This web application accesses a store of all live traffic data aggregated at 15-minute intervals, including probe counts. It includes tools to interrogate the data and generate reports from 2008.

TOMTOM MAP DATA

Users can access additional attributes such as number of lanes and speed profiles for perpetual use as part of internal member databases. Quarterly updates with change support conflation projects.

MEMBER INPUT

This ensures confidence in the data by enabling members to directly contribute new information and corrections for weekly updates of the Real-Time Traffic map.
