

# COMPUTER AIDED DISPATCH: WAYS TO INTEGRATE INTO TMC SYSTEMS

---

October 12, 2017

Call Number: 1-719-867-1571 - Enter 7254375 # at the prompt

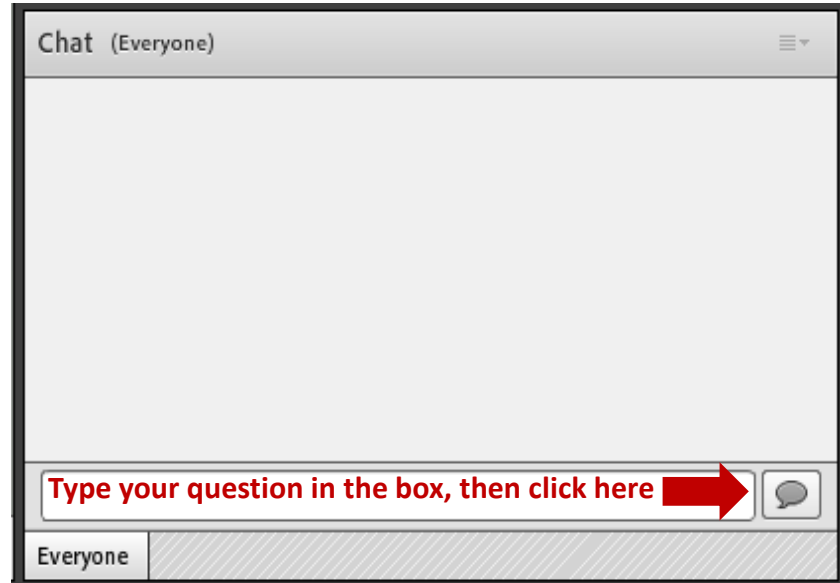

# Webinar & Audio Information

- The call-in phone number is: **1-719-867-1571 & enter 7254375# at the prompt**
- **Participants will be in “Listen Only” mode throughout the webinar**
- Please press \*0 to speak to an operator for questions regarding audio
- Please call 484-557-7009 for difficulties with the web or audio application
- The webinar will be recorded
- Presentations will be posted to the I-95 Corridor Coalition website. Participants will receive a link to the presentations after they are posted.

# Asking Questions

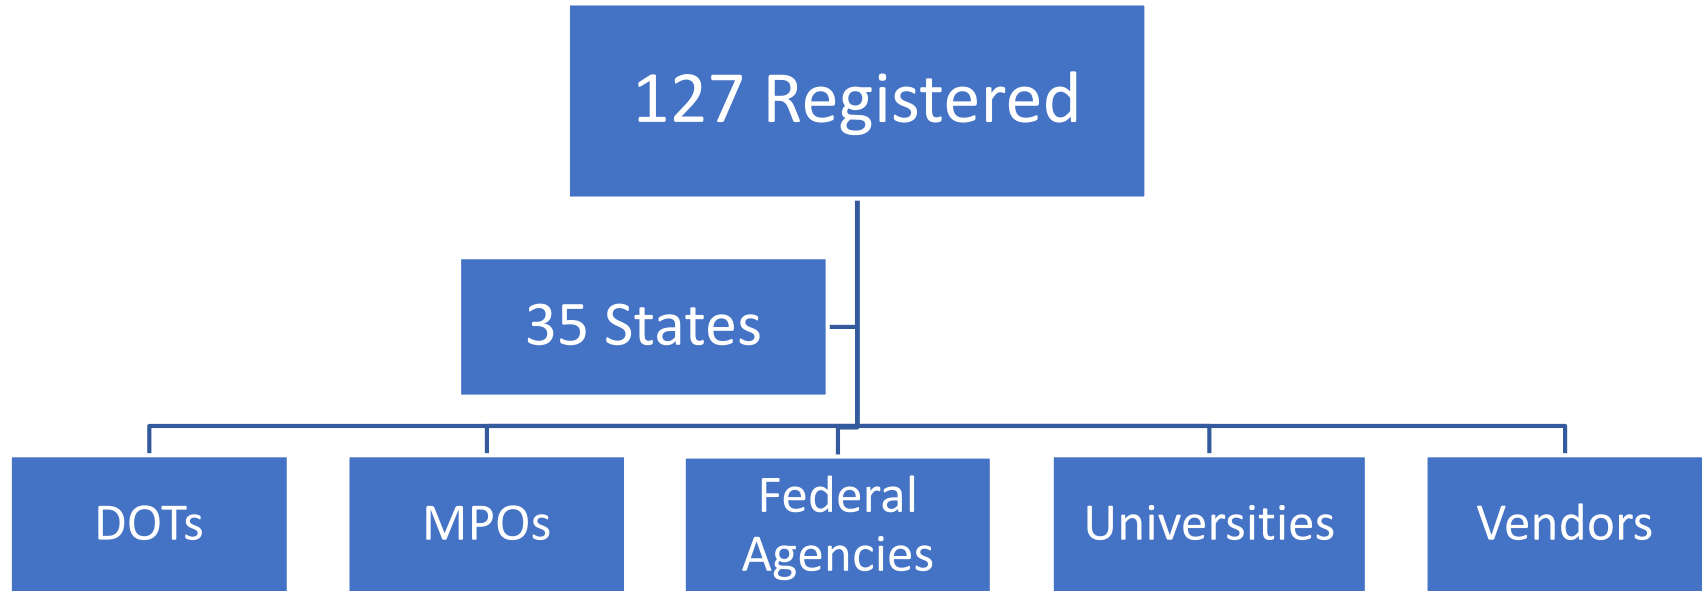

- Please pose your questions using the chat box
- Questions will be monitored then answered by the speakers at the end of the webinar

# Welcome

Welcome & Overview	Denise Markow, PE I-95 Corridor Coalition
ATMS CAD Integration	Robert Heller, PhD Southwest Research Institute
Computer Aided Dispatch (CAD) Integrations: Perspectives and Lessons Learned	John Horner, PE Q-Free North America
Minnesota DOT & State Patrol CAD Integration for Traffic & Incident Management	John McClellan Minnesota DOT
 Instant Polls – To gather info on participant experience with CAD Integration	All

# I-95 Corridor Coalition Sponsored Event

# Instant Poll

1

Have you done CAD integration with your ATMS or TMC systems?

☐ Yes

☐ No

# Who is the I-95 Corridor Coalition?

- 16 States and the District of Columbia
- 35% of nation's VMT (21% of road miles)
- 565 million long-distance (>100 miles) trips a
- Corridor = third largest economy in world

*How can we better message TSMO strategies Regionally?*

*...a partnership of multi-state, multi-modal public agencies working together to create a seamless and efficient transportation system*

# Introductions

Denise Markow, PE  
I-95 Corridor Coalition  
*TSMO Program  
Coordinator*

Robert Heller, PhD  
Southwest Research  
Institute  
*Program Director*

John Horner, PE  
Q-Free North America  
*Director of ATMS Product  
Strategy*

John McClellan  
Minnesota DOT  
*Freeway Operations  
Supervisor*

# Instant Poll

2

Why integrate CAD into your system?  
*(Check all that apply)*

- ☐ Improve incident response and quicker clearance
- ☐ To receive timely data from incident responders
- ☐ To automate data input
- ☐ To improve data to populate our traveler information systems
- ☐ We had no real-time source for incident data in our current system

# ATMS CAD INTEGRATION

---

Robert Heller, PhD  
Southwest Research Institute

SOUTHWEST RESEARCH INSTITUTE

SOUTHWEST RESEARCH INSTITUTE

# ATMS CAD INTEGRATION

ROBERT W. HELLER, PH.D.

PROGRAM DIRECTOR

SOUTHWEST RESEARCH INSTITUTE

# SWRI ATMS CAD INTEGRATION

- SwRI has implemented multiple interfaces
  - 2007 FDOT SunGuide Release 3
  - 2015 NHDOT New England Compass
- TxDOT Lonestar, FDOT SunGuide, NE Compass
  - SwRI developed common code base
  - State owned software (work for hire)
  - States license software to SwRI

# FLORIDA DOT CHARACTERISTICS

- Filtered feed
- Single statewide CAD vendor
  - One CAD install per FHP Troop
  - FHP Troop  $\neq$  FDOT District
  - Provides <latitude, longitude>
- CAD pushes file / Troop to common site
  - Files contain new events and update
  - Events open until no longer appear in file
  - Individual Troops may fail to publish file update
- SG FHP interface processes file
  - Subscriptions based on county & roadway
  - SG process data

# NEW HAMPSHIRE DOT CHARACTERISTICS

- Filtered feed
- Single NH State Police center
- Connect directly to CAD system interface
- CAD codes translated into ATMS event fields
- Location information
  - County, City, street address
  - No <latitude, longitude>
- Stripped of fields with potential Personally Identifiable Information (PII)

# FDOT VS. NHDOT FLOW

## FHP CAD to FDOT SunGuide Data Flow

## NH SP to NE Compass Data Flow

# WHAT DOES AN OPERATOR SEE?

- Operator sees event alert
  - Operator creates an event
  - Operator completes or updates fields in the event
  - Event is managed by the ATMS
- 
- CAD updates may modify the event
  - ATMS does not update CAD

SunGuide Incident Detected - Windows Internet Exp

Type: Fhp Incident  
Device: FHP ID LWRC\_SICP\_20  
Location: I 95 North E CYPRESS CREEK RD  
Time: 04-07-2009 16:12  
County: St lucie  
Author: Jim  
Event Type: Accidents And Incidents [Other]  
Remarks: @test  
Urgency: 10  
Started: 08-21-2008 08:06:47  
Updated: 08-21-2008 08:08:05  
Trooper Arrival:  
Trooper Dispatch:  
Ended:  
Description: undefined

Nearby Events (2.5 mi): -- 0 events nearby --

What would you like to do?

- ☒ Create New Event
- ☐ Create Secondary Event
- ☐ Set Responder Arrival
- ☐ Dismiss as Already Detected
- ☐ Dismiss as False Alarm
- ☐ Associate to Existing Event
- ☐ Acknowledge, Take No Action

# COMMON EXPERIENCE

- Documentation errors
  - FDOT: file naming, field format, field order
  - NHDOT: connection information, disposition codes, changes to closed events
- CAD operations cause issues
  - Both: roadway names, location accuracy, abbreviations
  - FDOT: <latitude, longitude> accuracy
  - NHDOT: street address not <latitude, longitude>
- Update frequency
  - Data lag
  - Work incident vs update data

# INCREASE PROBABILITY OF SUCCESS

- **Realize two contracting agencies, two developers**
- **Developer POCs for information exchange**
  - Facilitates immediate corrections to documentation
  - PM level POCs cause delays in information
- **Coordinate schedules**
  - Priorities need to be coordinated
  - Delays either side cause issues
- **Access to test feed early**
  - FDOT: no access to feed until acceptance testing
  - NHDOT: feed was not being updated

# QUESTIONS?

SOUTHWEST RESEARCH INSTITUTE

Robert W. Heller, Ph.D.  
Program Director, Southwest Research Institute  
[robert.heller@swri.org](mailto:robert.heller@swri.org)

## Instant Poll

3

What have you encountered as, or feel are, the obstacles to integrating the data? *(Check all that apply)*

- ☐ Cost
- ☐ Law Enforcement Sensitivity
- ☐ Lack of Stakeholder Interest and Involvement
- ☐ Not sure how to proceed
- ☐ Obstacles with outside IT Agency

# COMPUTER AIDED DISPATCH (CAD) INTEGRATIONS: PERSPECTIVES AND LESSONS LEARNED

OPEN  
ROADS

# Computer Aided Dispatch (CAD) Integrations

Perspectives and Lessons Learned

October 2017

LEADING THE WAY

## Outline

- What is CAD integration
- Perspective and Background
- What is the value
- Where to go to get the data
- How to get the data
- How to use the data
- Success factors

## What is it?

- Real-time data sharing system
- Cross agency, cross jurisdictional
- 911 (PSAP) CAD systems → DOT ATMS
- Automatic flow of event data between systems

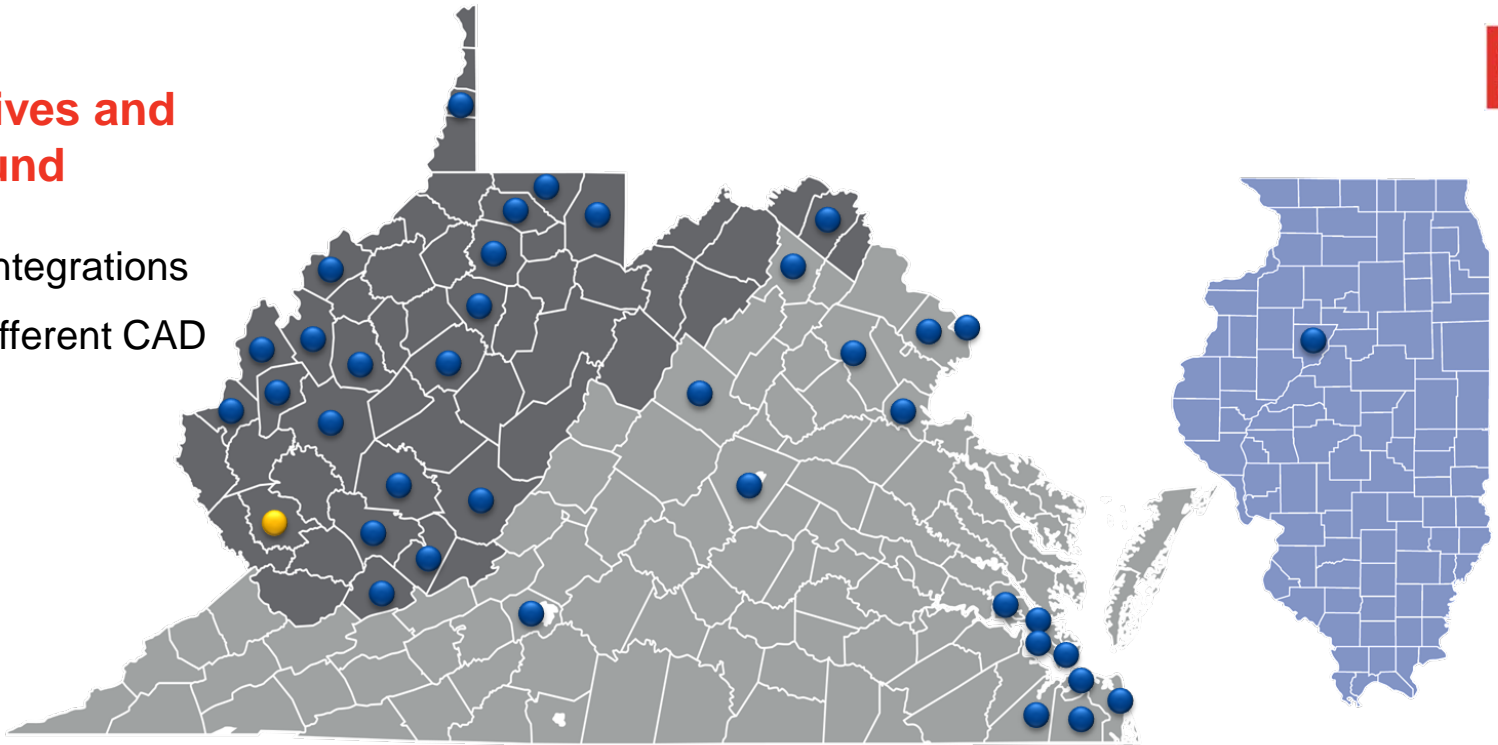

## Perspectives and Background

- Virginia System
  - Virginia State Police Integration in 2004
  - Albemarle integration 2005
  - Hampton Roads Regional system launched 2007
  - Northern Virginia Regional system
  - I-81 Regional system
  - Statewide consolidation 2011
- West Virginia System
  - Launched 2009
  - Goal to cover all jurisdictions with Interstates

# Perspectives and Background

- Over 40 Integrations
- Twelve Different CAD Vendors

IN PROGRESS	COMPLETE					
<ul style="list-style-type: none"> <li>Logan Co. WV</li> </ul>	<ul style="list-style-type: none"> <li>Albemarle Co., VA</li> <li>Berkeley Co., WV</li> <li>Braxton Co. WV</li> <li>Cabell Co., WV</li> <li>Chesapeake, VA</li> <li>Fairfax, VA</li> <li>Fauquier Co., VA</li> </ul>	<ul style="list-style-type: none"> <li>Fayette Co., WV</li> <li>Frederick Co., VA</li> <li>Greenbrier Co., WV</li> <li>Hampton, VA</li> <li>Harrison Co., WV</li> <li>Jackson Co., WV</li> <li>James City Co., VA</li> </ul>	<ul style="list-style-type: none"> <li>Kanawha Co., WV</li> <li>Lewis Co. WV</li> <li>Marion Co., WV</li> <li>Mason Co. WV</li> <li>Mercer Co., WV</li> <li>Monongalia Co., WV</li> <li>Newport News, VA</li> </ul>	<ul style="list-style-type: none"> <li>Norfolk, VA</li> <li>Ohio Co., WV</li> <li>Peoria, IL</li> <li>Preston Co., WV</li> <li>Putnam Co., WV</li> <li>Raleigh Co., WV</li> <li>Roane Co. WV</li> </ul>	<ul style="list-style-type: none"> <li>Roanoke, VA</li> <li>Rockingham Co., VA</li> <li>Stafford Co., VA</li> <li>Suffolk, VA</li> <li>Summers Co., WV</li> <li>Virginia Beach, VA</li> <li>Virginia State Police</li> </ul>	<ul style="list-style-type: none"> <li>Wood Co., WV</li> <li>York Co., VA</li> </ul>

## What is the value of CAD Integration?

- Immediate value to DOT
  - VDOT -- up to 88% of crash discovery was by VSP CAD
  - VDOT -- 34% reduction in clearance time across 67 miles of I-95
- Additional value to integration partners
  - Reduced communication workload
  - Improved situational awareness
  - Often intangible

## Where to Go to Get the Data

- Law enforcement responsibility is a patchwork
- Dispatch responsibility may be different from patrol responsibility
- Look for pre-existing integrations
- Use road network as a guide
- Use relationships as a guide
- Use existing CAD integrations as a guide

## How to Get the Data

- Institutional Issues
  - LE culture very different from DOT
  - May be reluctant to share data
  - Emphasize zero impact on 911 ops
  - Look for champions (SHRP 2 converts)
  - Do not let IT take over project
  - Consider written institutional agreements
  - Talk to: PSAP Director
- Technical Issues
  - Most CAD systems support export
  - Get creative with older ones
  - May not make distinction between secure and non-secure data

## How to Get the Data

- Security

- Place local hardware (or VM)
- No inbound connections
- Use strong encryption
- Existing integration with law enforcement data source may constrain options
- Talk to: IT Manager

- Filtering

- Event types
- Field selection
- Content selection
- Geographic selection
- Narrative field always an issue
- Talk to: CAD Administrator, Operations Manager

## How to Use the Data

- Have appropriate expectations
  - Unverified
  - 911 not concerned with traffic management
  - Not all integrations provide the same value
  - Excellent source for incident detection
- Start with small steps
  - Put in infrastructure first

## Success Factors

- Good filtering is essential – work to find Goldilocks spot
- Integrate into existing operational tools and practices
- Plan for maintenance activities and cost
- Have a plan for CAD system changes/upgrades
- Look for simple operational improvements that the integration enables: ROADI

# CHANGING *the* movements of life

# Instant Poll

4

What is your preferred method of CAD integration?

- ☐ The use of an integration software/system
- ☐ A direct link to our ATMS and/or TMC system
- ☐ Not sure

# MINNESOTA DOT & STATE PATROL CAD INTEGRATION FOR TRAFFIC & INCIDENT MANAGEMENT

---

John McClellan  
Minnesota DOT

# Minnesota DOT & State Patrol Computer Aided Dispatch (CAD) Integration for Traffic & Incident Management

John McClellan  
Freeway Operations Supervisor  
MNDOT Regional Transportation Management Center (RTMC)

# RTMC Dispatch Floor

# DOT TMC Day to Day Operations

- Traffic Management – ramp meters & HOV / HOT (“MNPASS”)
- Traveler Information – cameras, detection data, 511, travel times, DMS advisories
- Congestion Data for Planning
- Incident Management...

# Our Goal – Awareness of EVERY incident on the Metro Freeway Sys!

Every incident – crash, stall, debris, fire, jumper, etc. - Pin down on camera within 20 seconds of dispatch and begin triage.

- Send FIRST (MNDOT FSP)
- Deploy overhead signs
- Call SP to correct location
- Incident report sources
  - Listening to Patrol dispatch radio
  - Monitoring Patrol camera usage
  - CAD

# FIRST — Freeway Incident Response Safety Team

# TMC Incident Data History

- 1997-2008 ➤ TMC operators entered data in MS-Access database
- 2002 to 2008 ➤ “view only” console of SP CAD.
- 2008 ➤ Full TMC integration with SP CAD (Intergraph)
- TMC & FIRST (FSP) response logged in CAD
  - Benchmarks (lanes clear, road clear, arrival times)
  - FIRST work performed (gas, tire change, pushing a vehicle, etc.) & AVL data.

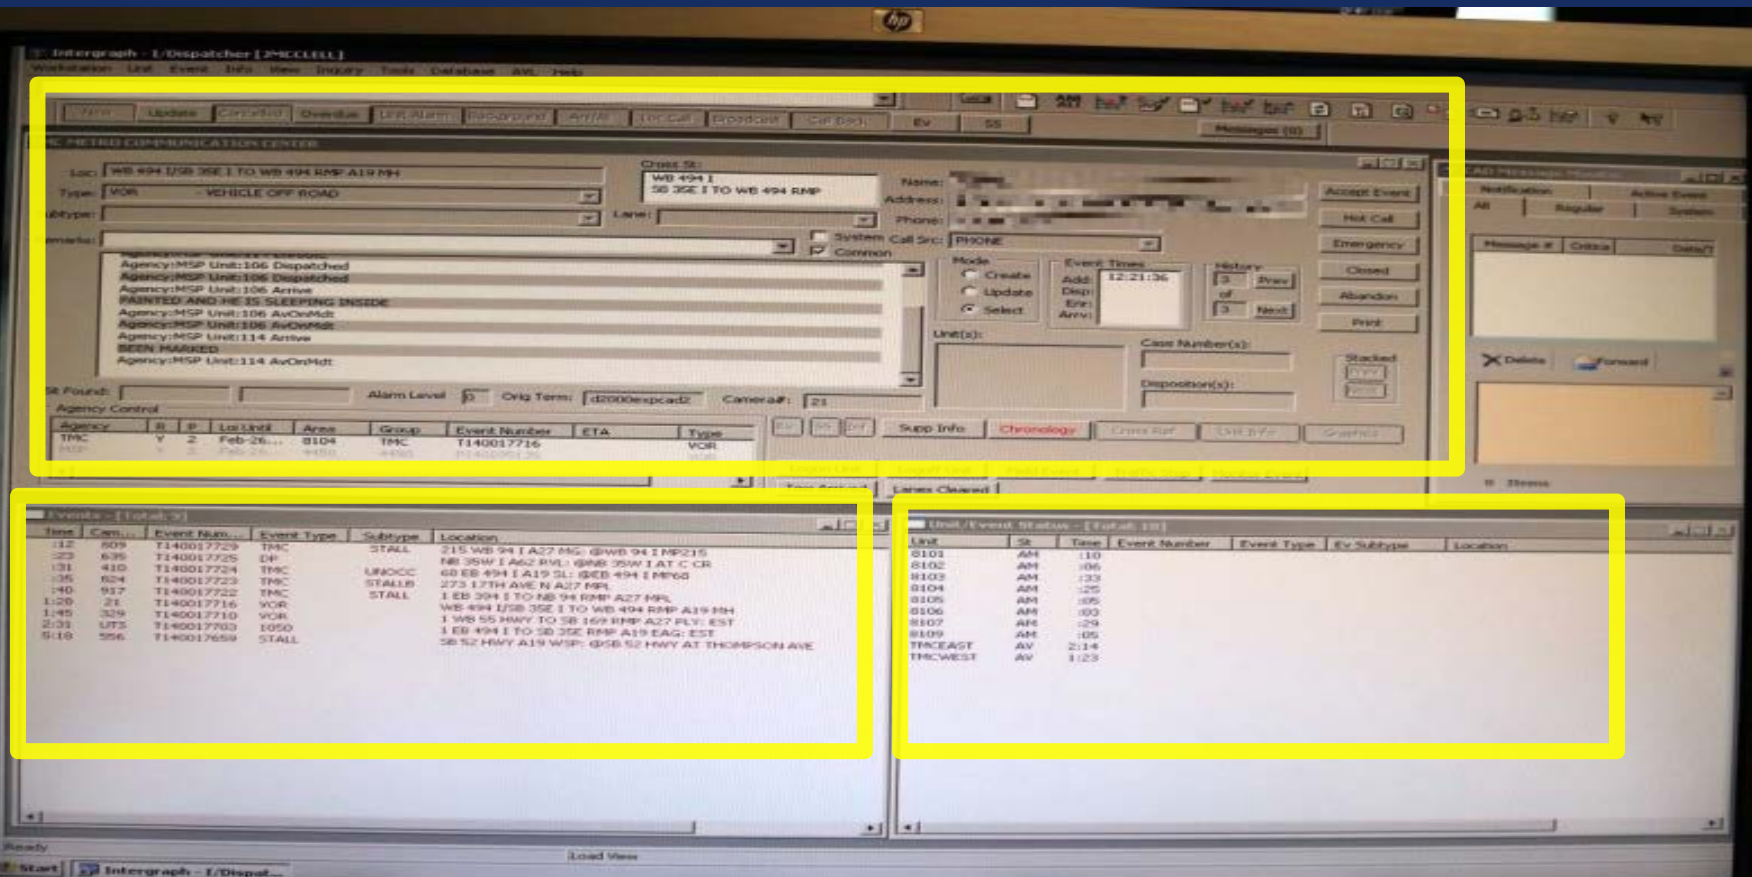

# TMC / FIRST Dispatch Workstation

- Cameras
- IRIS & Email
- Radio

Ready Load View

Intergraph - I/Dispatch...

# TMC tools – CAD 2<sup>nd</sup> screen

# How it works

- TMC receives a linked-copy of traffic related events created by State Patrol dispatchers
  - **Common:** Location, event type, remarks
  - **Distinct:** Incident close time
- TMC / FSP creates own events for stalls, etc. that Patrol is not responding to
  - TMC created events can be merged into Patrol events as needed for continuity

# Getting data out of CAD for TMC use

- 2008 to 2014 – Annual data dump from SP
  - OK for annual benchmarks, but no real time benefits
- 2014 to present – Purchased module from vendor that provides clear XML feed of traffic related events, times, and TMC entered remarks (InterCAD)
  - TMC captures real time & stores in Postgres database
  - XML includes: Lat/Long, event type, common name, start & close times, unit status times, FIRST AVL breadcrumbs, TMC remarks.
  - Reformat to CSV & pushed out by FTP to CARS511 (Castle Rock)
  - Ingested by ATMS software – IRIS (in house, open source)
  - Reports viewable using Django web framework (open source Python)
  - CARS & IRIS have their own public XML feeds (to Waze, etc.)

# Security & Privacy issues????

- TMC is firewalled off from Criminal Justice Interface (CJI) databases
  - Plates entered by TMC only search the common Patrol Location of Interest (LOI) database. No warrants, driver or owner info, etc.
  - SP entries are encrypted / unreadable.
  - TMC entries are clear text / readable.
- FIRST uses LOI for tracking “frequent flyers” for gas assists. Patrol can see those too.
- FIRST impounds are entered by SP dispatch to get Registered Owner info and enter into FBI’s NCIC database.
- A basic training on CJI data provided by State BCA for “incidental users” like TMC & FIRST.

# How does TMC use the CAD data?

## #1 – Real time incident management!!

- Shared awareness for TMC staff
  - Eliminate duplicate data entry
  - Increase interagency coordination with Patrol
- 
- 511 & ATMS
  - Automated tool to track incidents with WZ's
  - Some specific queries (WW's, FIRST)
  - FHWA TIM SA & Upper level staff reports
  - Lots more things possible... video wall automation, custom camera salvos, weather messaging...

# TMC Event Source

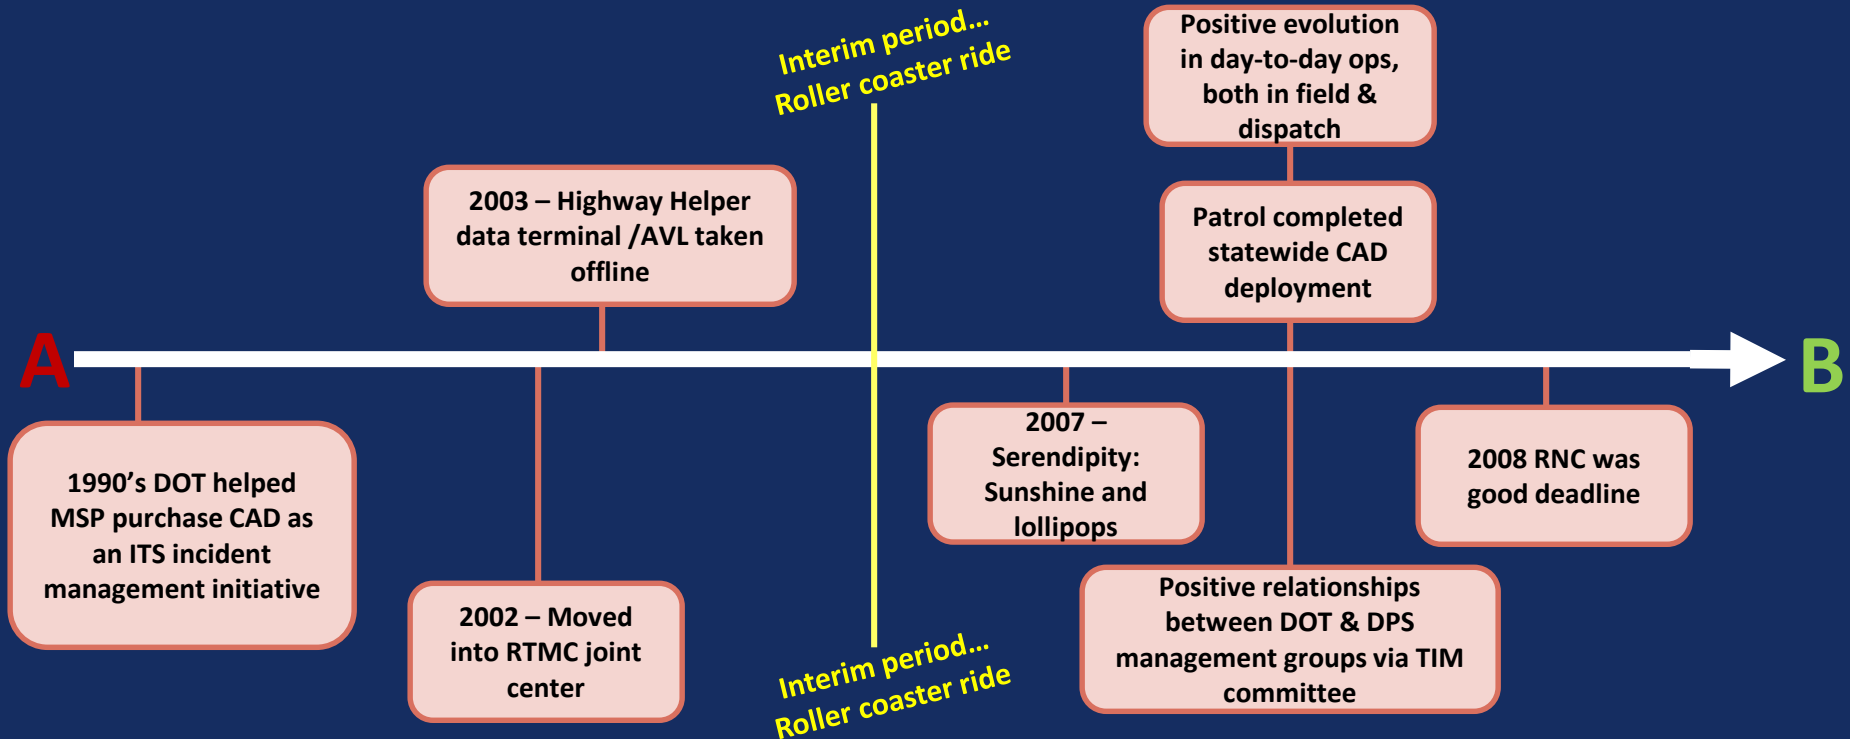

## 2015 CAD events

SP 911 – 48,000

FIRST – 12,000

TMC – 6,500

# How'd we get from **A** to **B**?

# DOT Operator Training?

- For FIRST - pretty easy – mostly touchscreen buttons.
  - A few retirements occurred before implementation
  - Overall EXTREMELY positive about getting CAD
- For Dispatchers – mostly drag & drop. Syntax for creating events more involved – but not difficult for dispatch staff relative to other duties.
  - Example: “@NB 35W I AT LAKE ST%”

- On the wish list for 5+ years
- InterCAD project made data much easier to get to
- Secondary crashes, visibility of crash cause, 911 notification time

# Results of Secondary Crash Analysis

- 2 weeks in August - 4:30am-10pm Mon - Fri
- Average 81 crash events per day in Metro area
  - 60% had vehicles visible on playback (48 crashes)
  - 40% not visible: Dups, outside cam coverage, minor bump & go H&R's, 10-21 events
- Of the per-day average – 48 crash scenes visible
  - Rear end collisions in recurring congestion
  - 18% actual crash visible
  - 4% classifiable as “secondary crash”
  - About 2 secondary crashes per day
