Virtual Information Exchange: Considerations for Digital Infrastructure -
Project Examples and Planning for the Future
June 28, 2023**

Note: Results from polling questions asked during this virtual information exchange are at the bottom of the document.

Resources for Participants

- Roadway Automated Driving Systems Integration: <https://ops.fhwa.dot.gov/publications/fhwahop22052/fhwahop22052.pdf>
- Digital Infrastructure: Technology as a Force Multiplier for A Safer, Greener, Smarter, More Equitable Future: <https://itsa.org/advocacy-material/digital-infrastructure-technology-as-a-force-multiplier-for-a-safer-greener-smarter-more-equitable-future/>

Digital Infrastructure Projects at Pennsylvania DOT

Q: Dwayne Cook (Virginia DOT): Is your statewide ITS network isolated or inter-connected to other things (i.e. traditional IT networks)? I'm approaching this from a cybersecurity standpoint.

A: Gunnar Rhone (Pennsylvania DOT): I'm not entirely sure. We allow third-party developers to get different data from the network. We also interact with the Genentec network. They run our camera system. We do have others connected to our network. PennDOT has many different security protocols.

Q: Amy Getchell (Massachusetts DOT): At MassDOT, we are doing a web-based work zone management pilot with HNTB. I'm curious to find out what consultant/platform are you using at PennDOT.

A: Gunnar Rhone (Pennsylvania DOT): SwRI is the consultant/developer on the lane reservation system. FREEVAL assisted too.

Q: Russell Holt (Rhode Island DOT): Can you share how PennDOT prioritized deployment of the CMS Queue warning systems (i.e., which facilities first)?

A: Gunnar Rhone (Pennsylvania DOT): We identified safety corridors via a few crash and incident parameters, others were identified by weather safety data where we have a higher prevalence of long-term closures, and others were constructions projects on limited access routes that wanted a queue protection system

Georgia's Digital Infrastructure Corridor

Q: John Corbin (Federal Highway Administration): The applications illustrated can all arguably be provided more immediately and ubiquitously through existing cellular network capabilities and industry solutions. Is The Ray focused exclusively or primarily on dedicated-spectrum connected vehicle schemes, or are you also integrating cellular network solutions?

A: Allie Kelly (The Ray): We are interested in integrating cellular network solutions as well.

Q: **Russell Holt (Rhode Island DOT):** Any negative experiences to share yet regarding the alerting of upstream travelers of hard braking downstream? A concern might be that some road users over time will disregard (or turn off) such alerting if they aren't finding it valuable to them.

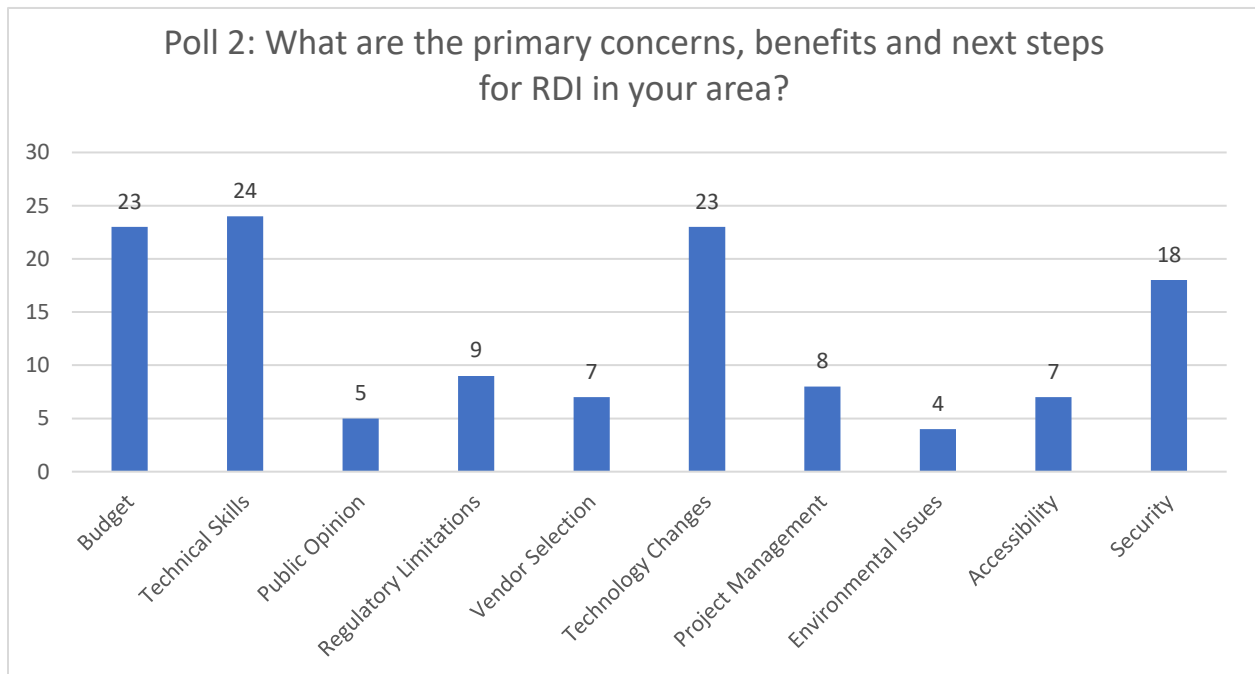

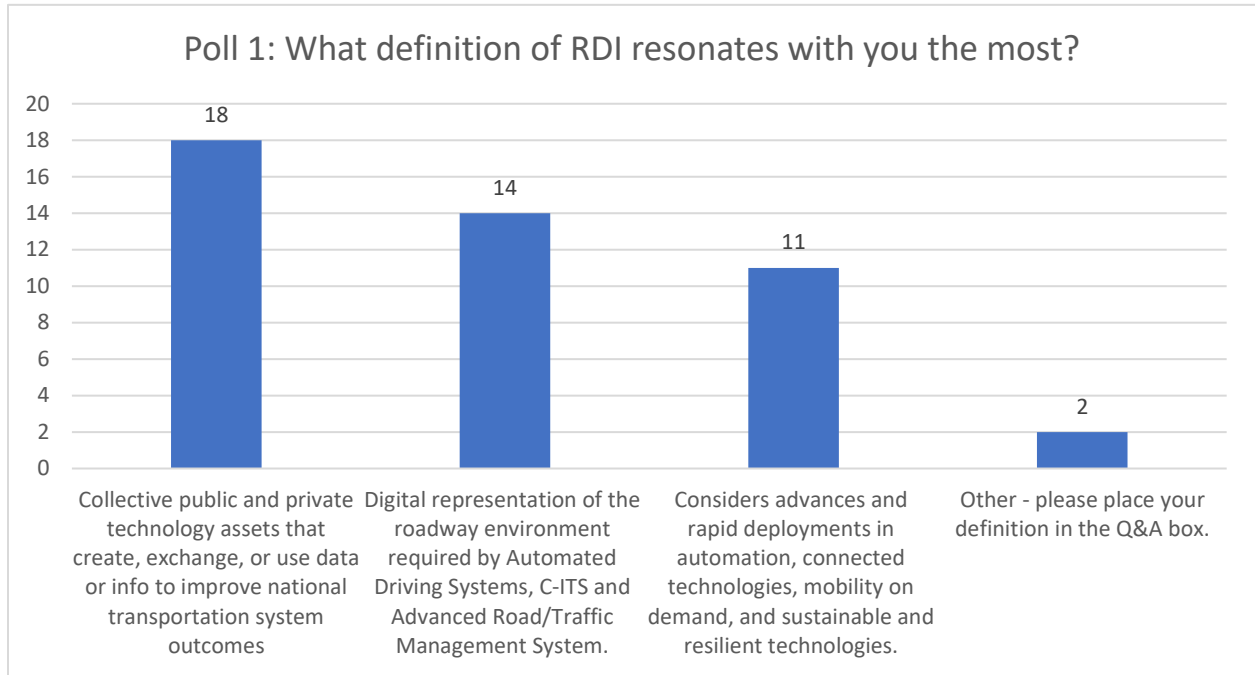

A: Allie Kelly (The Ray): No negative experiences with driver response yet.

Q: **Dwayne Cook (Virginia DOT):** Are these data flows/networks isolated and secure? As they become more prevalent, the risk of exposure and manipulation increases.

A: Allie Kelly (The Ray): Yes, there is end-to-end security. It tracks message sources for message authenticity and allows authorized actions only. No message alterations are allowed en route.
