

RITIS User Group

RITIS User Group Web Meeting
September 4, 2025

Welcome!

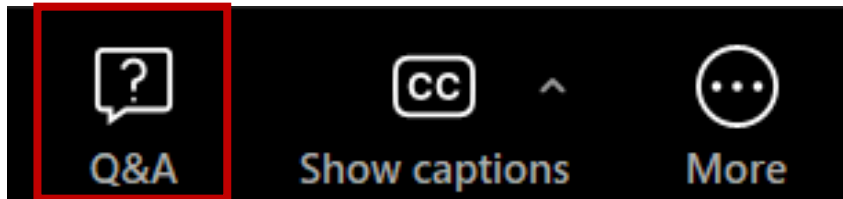

- We are using Zoom **Webinar**
- **AUDIO (Computer):** Use your computer speakers and microphone by clicking the “Join Audio” button at the bottom left of the screen. You will be muted.
- **Alternate Audio (Phone):** Call into the meeting by dialing the phone number based on your location (provided in the confirmation email) and enter the Meeting ID at the prompt. You will be muted.
- **This web meeting is being recorded.**
- **Questions** with the audio or web? Please contact Nicole directly via email (nforest@tetcoalition.org)
- Please use the **Q&A box** for questions to the presenters. The **Chatbox** is not available to participants.

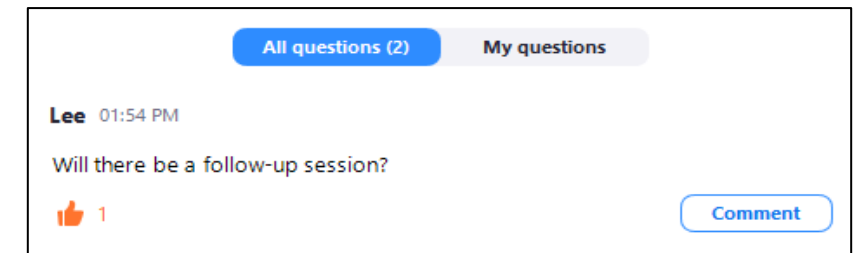

Asking Questions in the Q&A Box

- Click on the Q&A icon at the bottom of your screen

- The questions in the Q&A box will be monitored and answered at the end of each presentation or at the end of the meeting
- You can keep track of your questions in the “My Questions” tab in the Q&A box

Asking Questions Verbally

- Please raise your hand (*click on the hand icon at the bottom of the screen*) and a host will unmute you.

- Please give your name and agency before asking your question
- **Please mute yourself when you are finished speaking**

Welcome from the Coalition and upcoming RITIS Events!

Nicole Forest

The Eastern Transportation Coalition
TSMO Program Associate

Event	Date
RITIS User Group Web Meeting	December 4, 2025 1:30pm-3:00pm

Welcome & Introductions

Jesse Buerk

*Manager, Office of Capital Programs
DVRPC
RITIS User Group Co-chair*

Today's Meeting

Presentation	Presenter	Time
RITIS Events Update Welcome & Introductions	Nicole Forest, The Eastern Transportation Coalition Jesse Buerk, DVRPC & RITIS User Group Co-chair	5 mins
Agency Spotlight Presentation: Measuring and Visualizing Performance for the Sparks Intelligent Corridors Project	Alex Wolfson, Regional Transportation Commission of Washoe County	30 mins
Trips Data for Calibrating Travel Demand Models	Greg Jordan, UMD CATT Lab	20 mins
Review of new features and capabilities along with work in progress	Michael Pack, UMD CATT Lab Charles Lattimer, UMD CATT Lab	20 mins
User Feedback Session & Wrap Up	Michael Pack & Jesse Buerk	10 mins

Today's Speakers

Michael Pack
University of Maryland
CATT Lab
Director

Greg Jordan
University of Maryland
CATT Lab
Assistant to the Director

Alex Wolfson
Regional Transportation Commission of Washoe County
Project Manager

Charles Lattimer
University of Maryland
CATT Lab
Signal Systems Analytics Lead & Outreach

Polls 1, 2, and 3

Poll 1: How often do you attend RITIS User Group Web Meetings?

- a) 1-2 times per year
- b) 3-4 times per year
- c) This is my first meeting

Poll 2: How do you use the data and visualization results from RITIS tools (choose one)?

- 1. We use results directly from RITIS to develop products (reports, maps, etc.)
- 2. We download the data and use our own agency's in-house tools to create tables and visuals for product development
- 3. We do a little bit of both

Poll 3: Who is your primary audience for sharing information that was developed from RITIS and PDA Suite (choose one)?

- 1. Peers
- 2. Management
- 3. Executive Leadership
- 4. Elected Officials
- 5. General Public

Spotlight Presentation: Measuring and Visualizing Performance for the Sparks Intelligent Corridors Project

Alex Wolfson

Project Manager

Regional Transportation Commission of Washoe County

Sparks Intelligent Corridors

Determining Triggers and Measuring Performance

RITIS Users Group

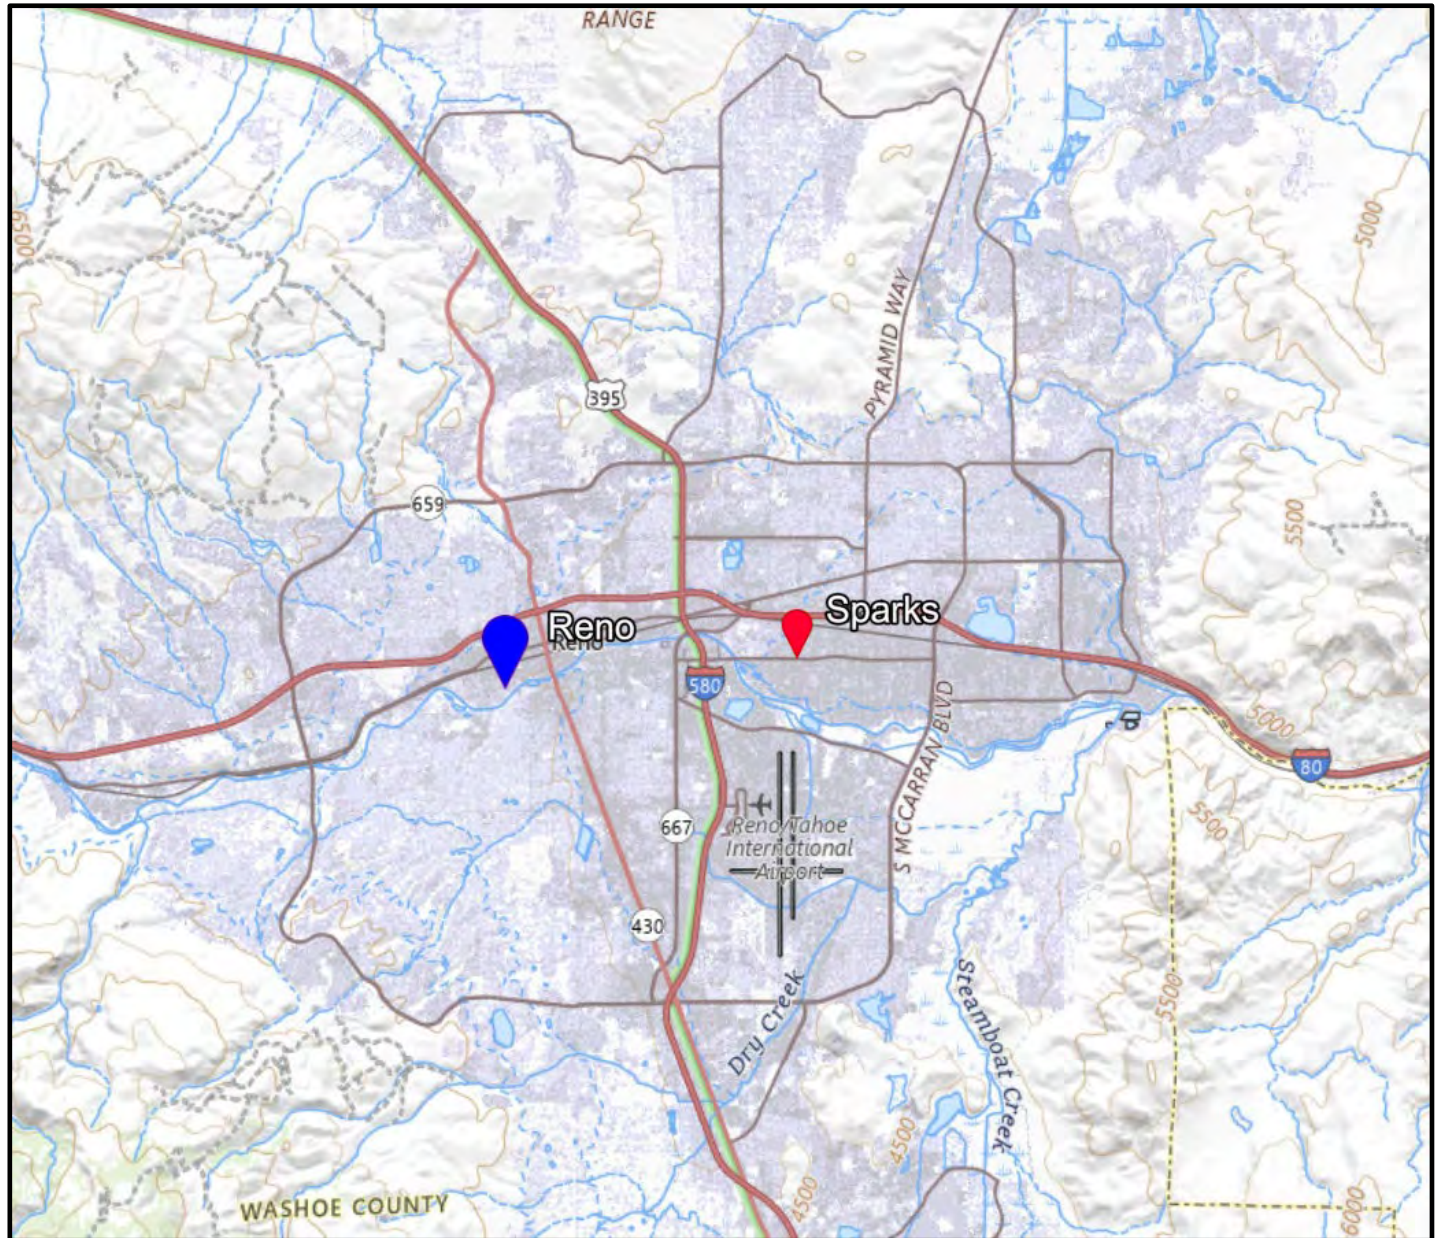

September 4, 2025

RTC Washoe Facts

- 3 local agencies
 - City of Reno
 - City of Sparks
 - Washoe County
- Metro population
~500,000
- 425 traffic signals

Project Location

Project Overview

The Goal

Actively manage traffic
on the affected arterials

The Challenges

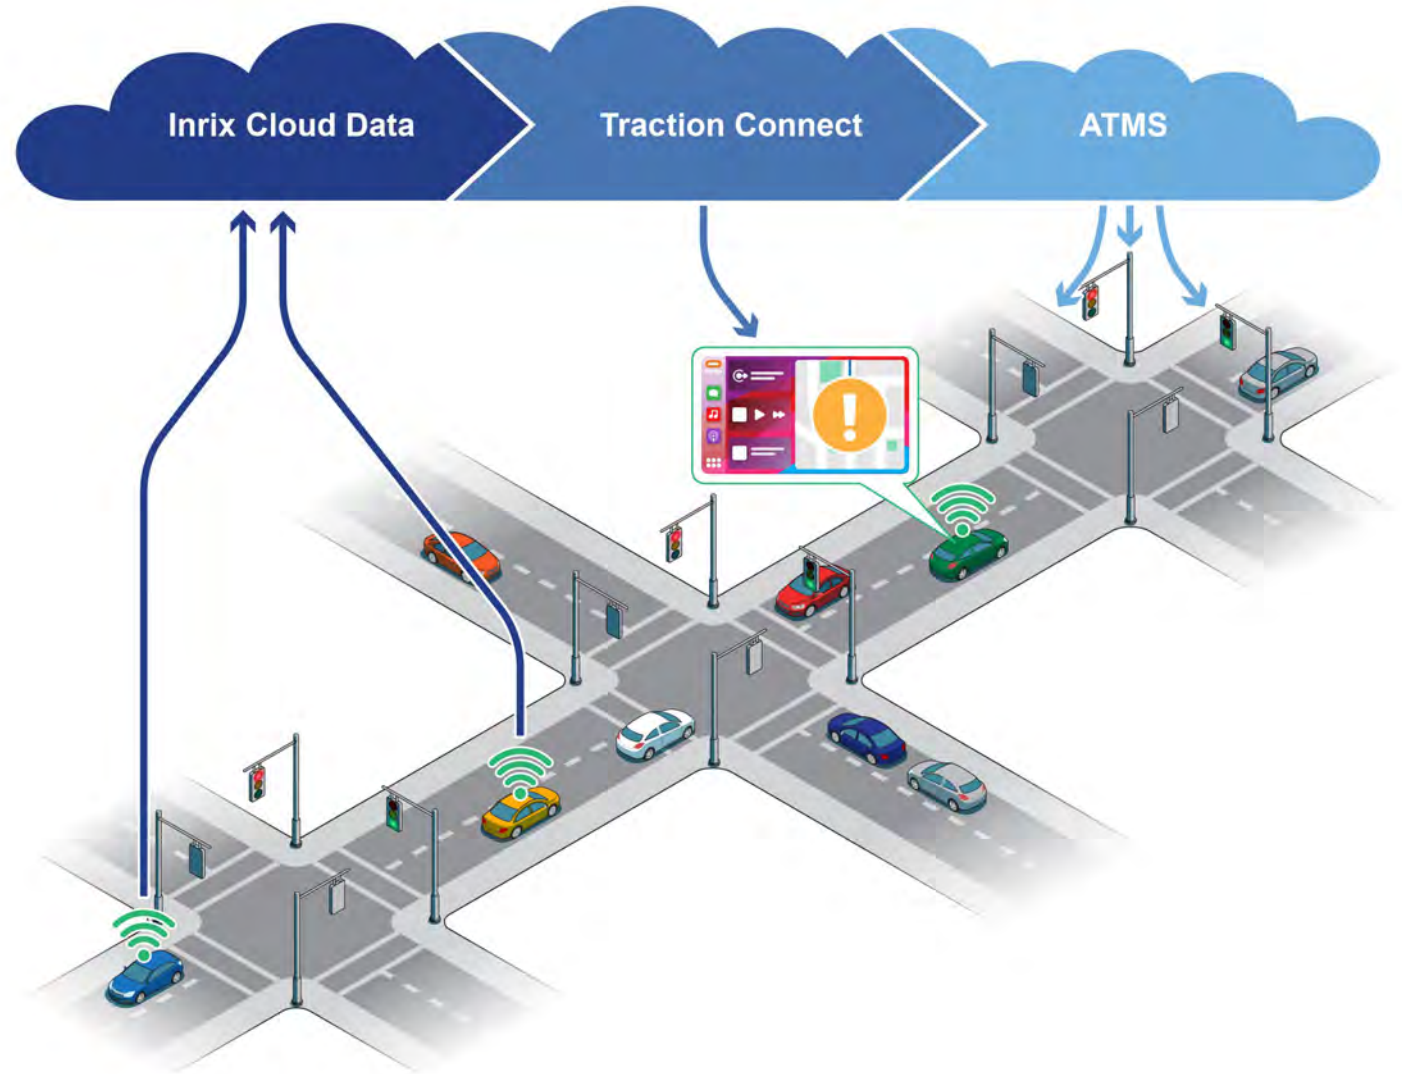

- Multiple jurisdictions
 - Local agencies
 - State DOT
- High costs
- Logistics

Solution

- Try out a virtual system
 - Vehicle trajectory data
 - Dynamic signal timing
 - Virtual message sign
 - Location-based alerts

How it works

Alex Wolfson
awolfson@rtowashoe.com

Command History from 2/4/25 to 4/30/25, 68 activations in the PM Peak Hour

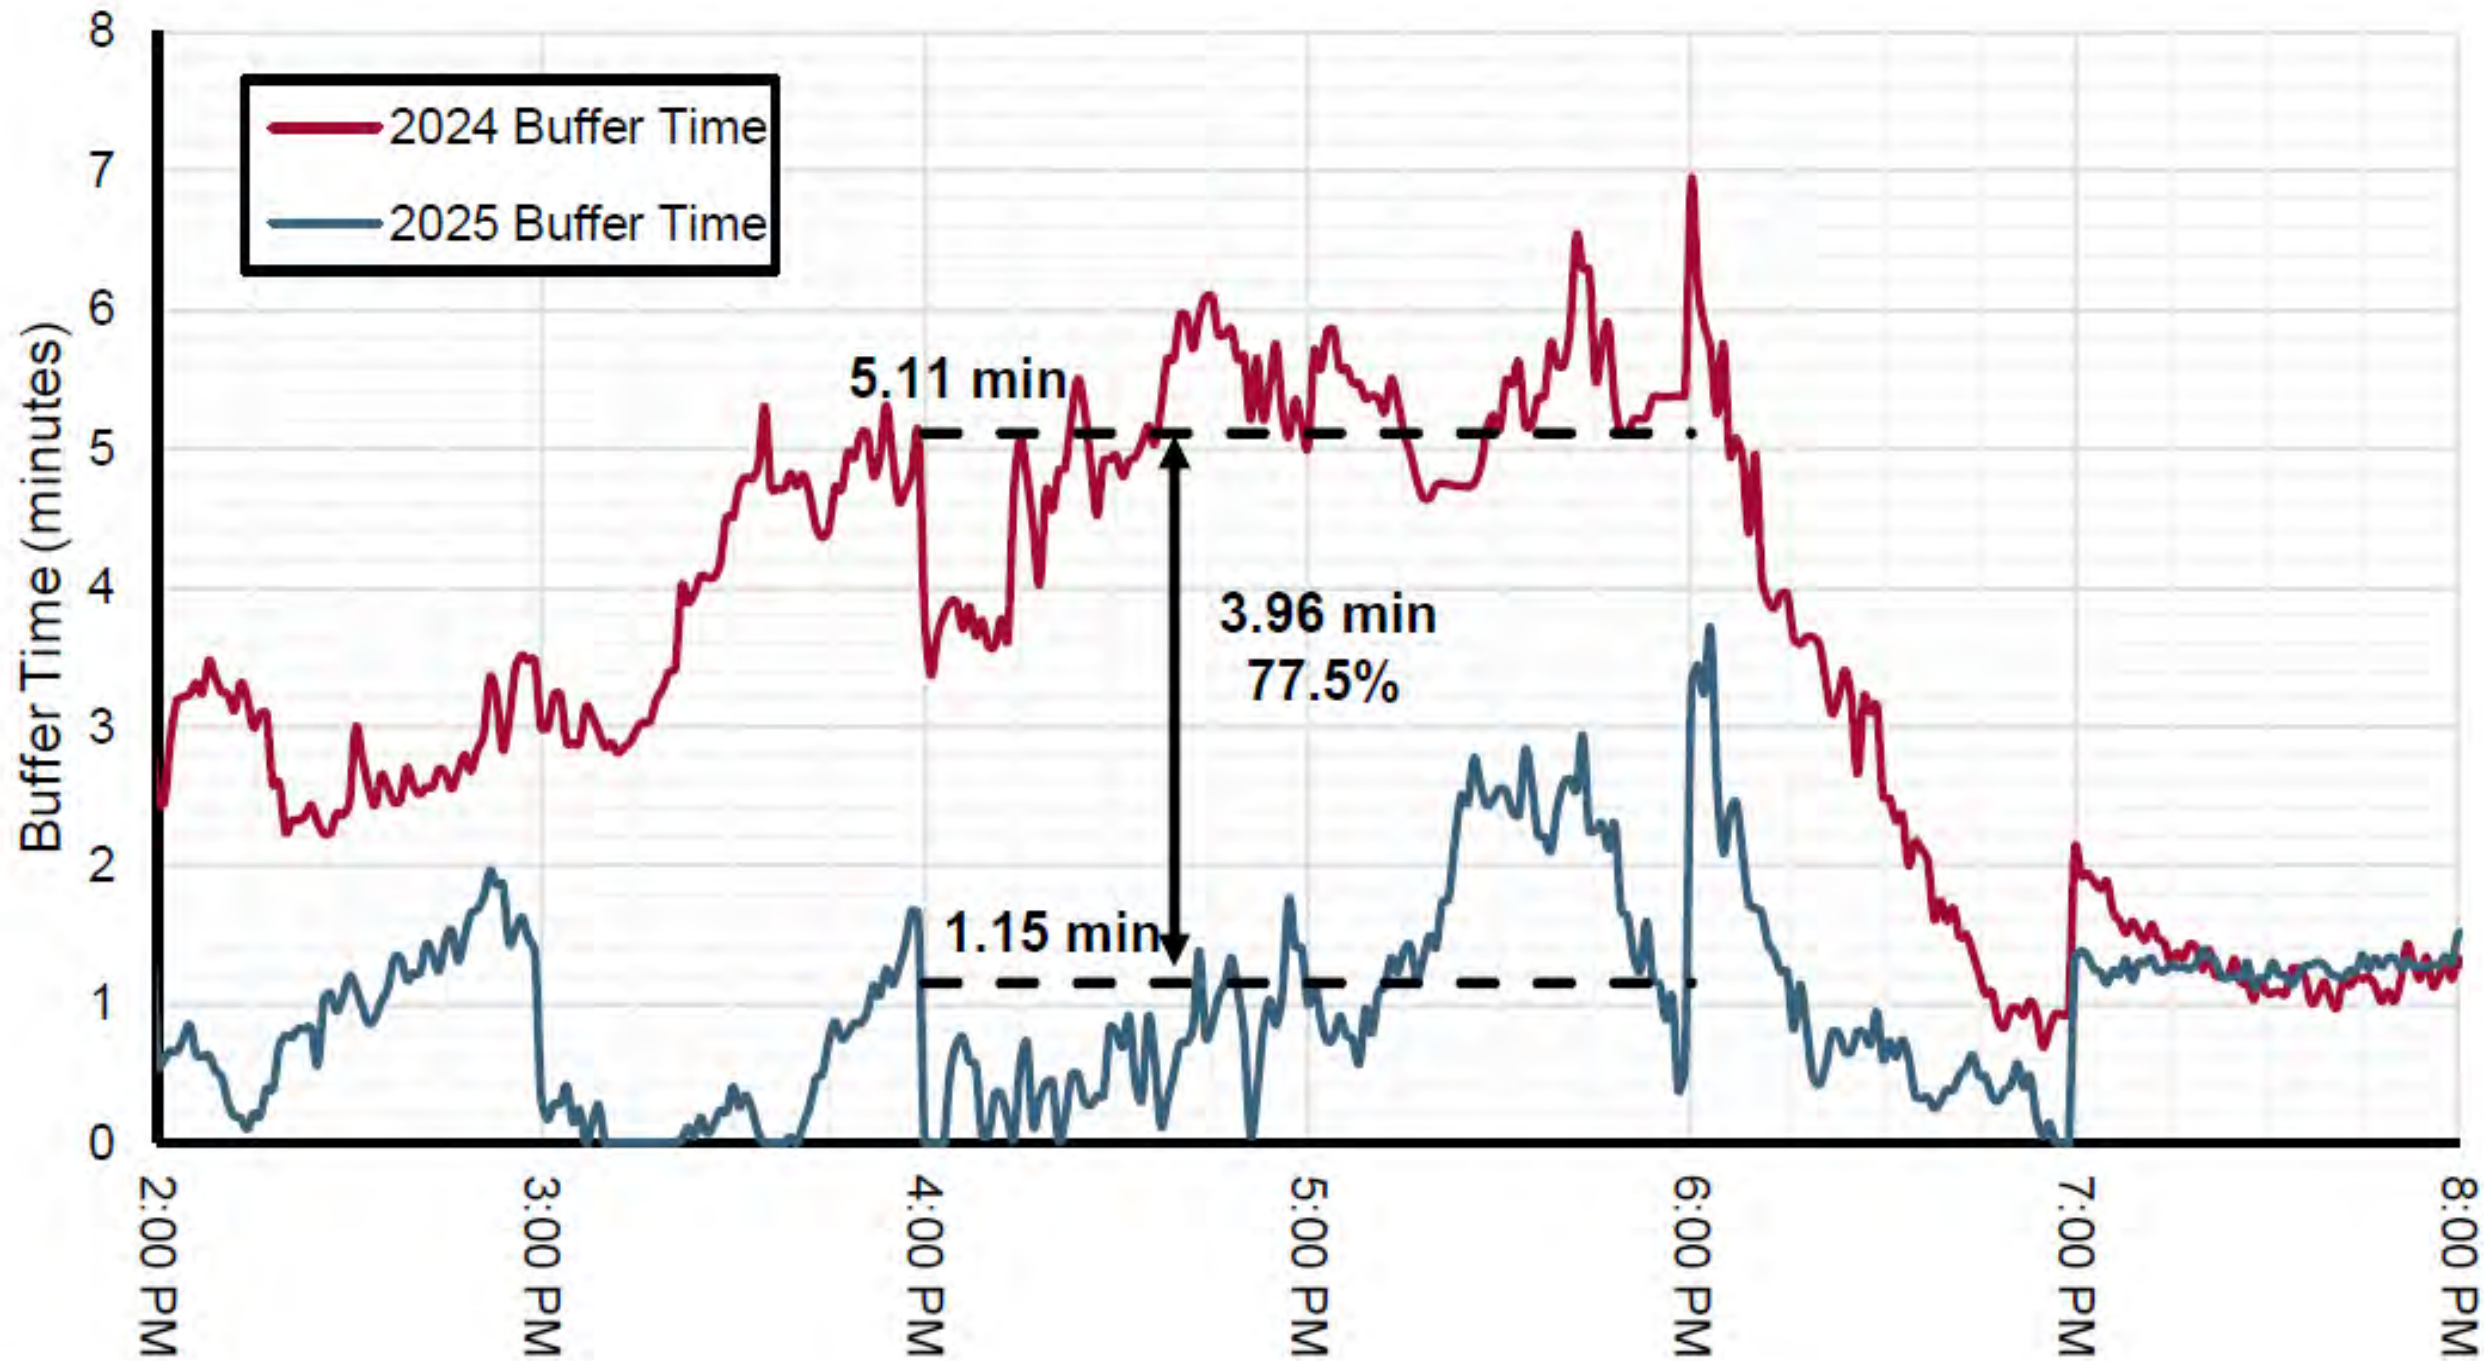

NB Sparks Boulevard Activation Frequency

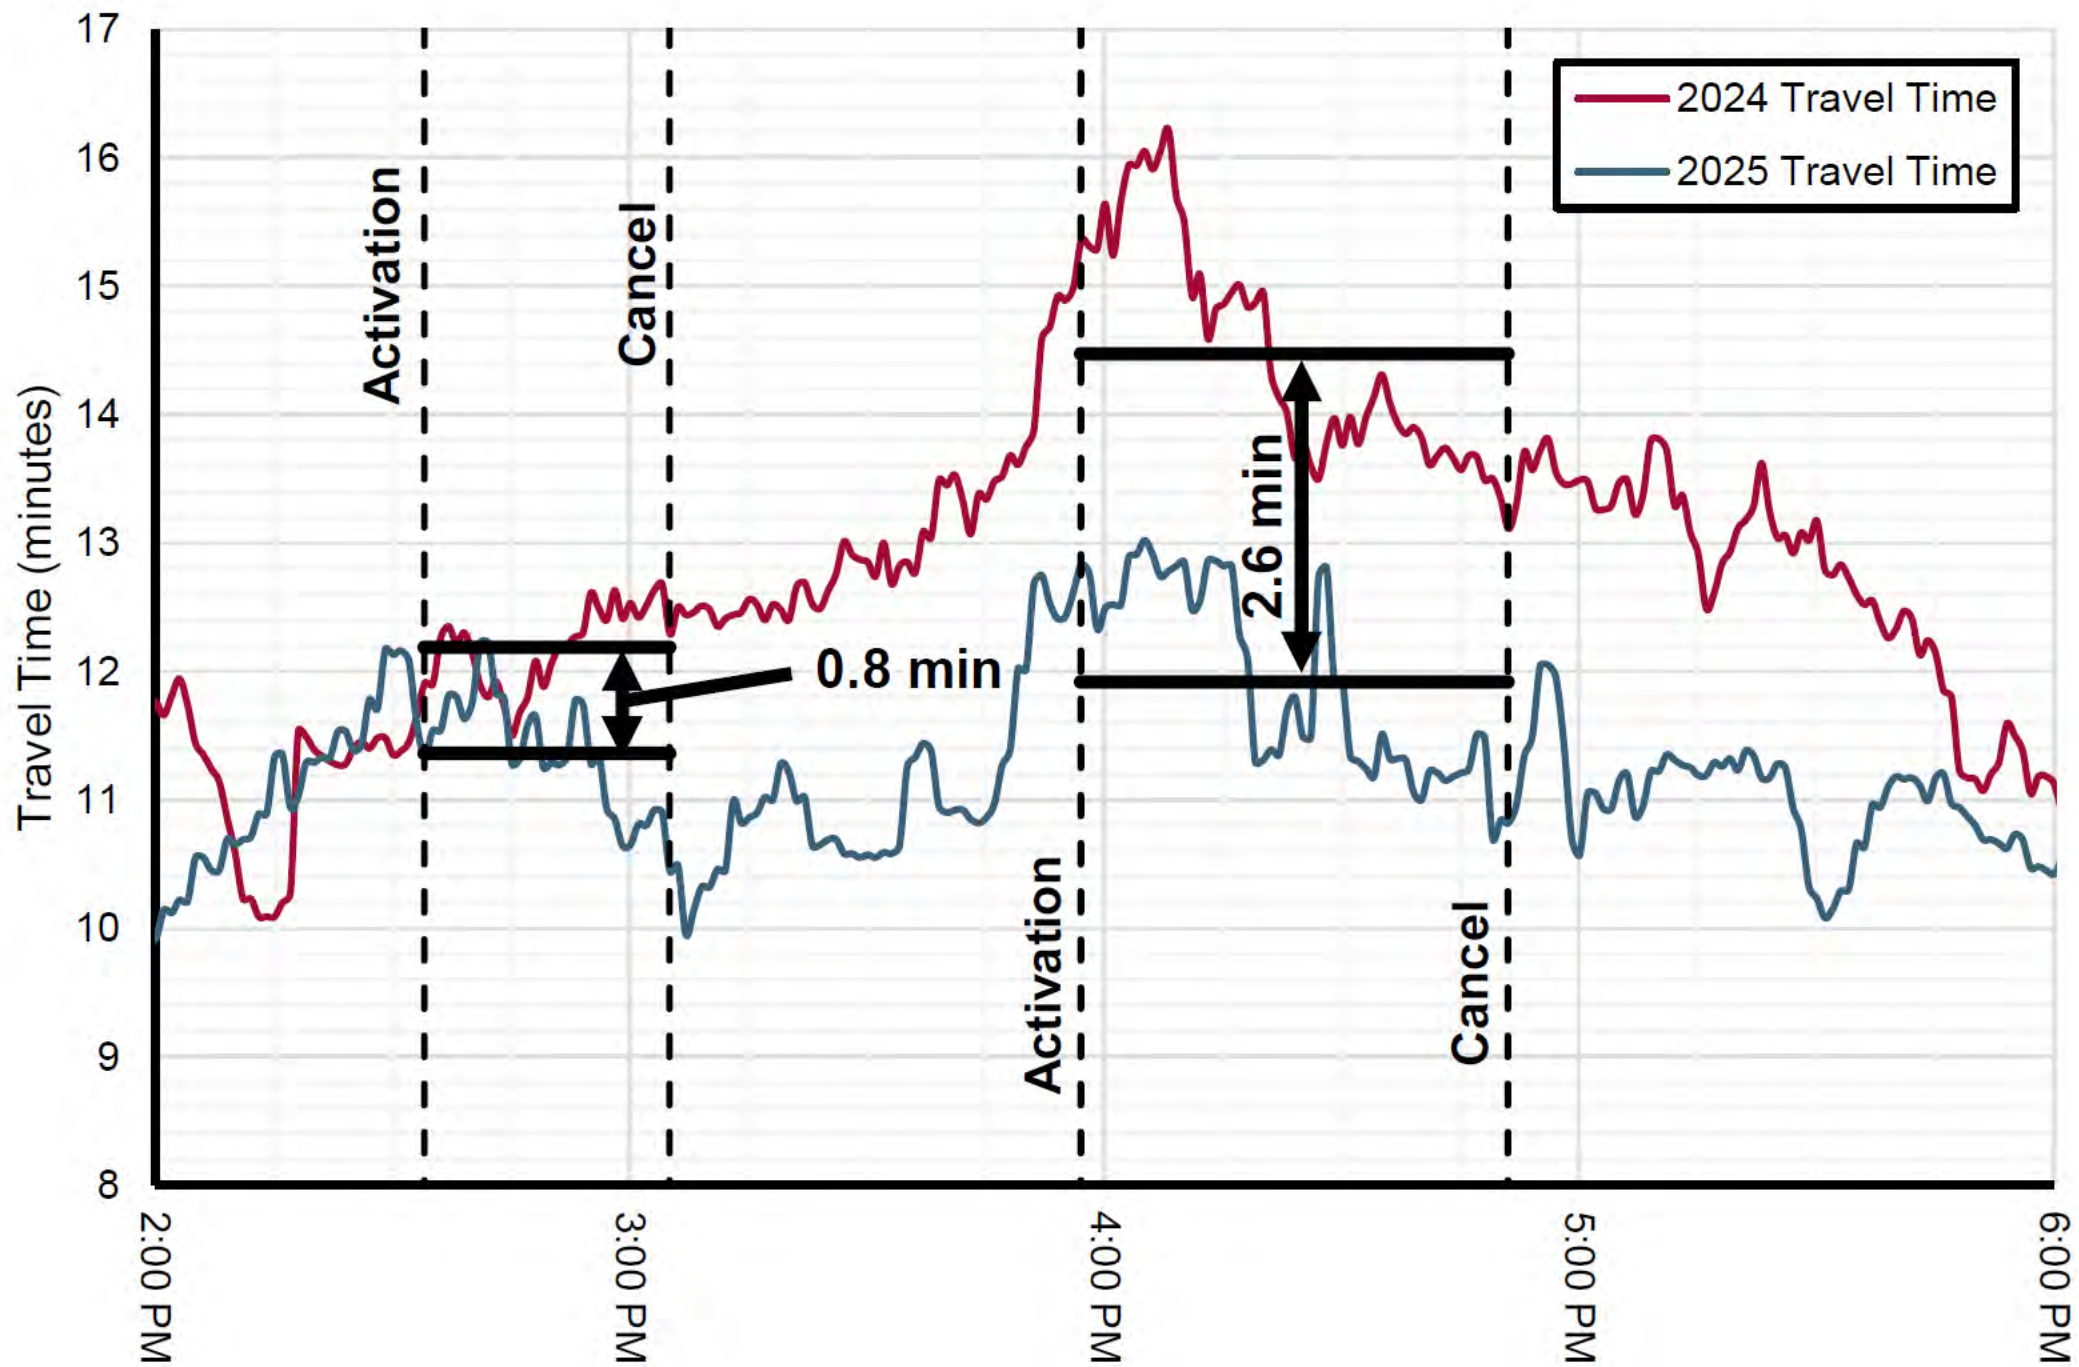

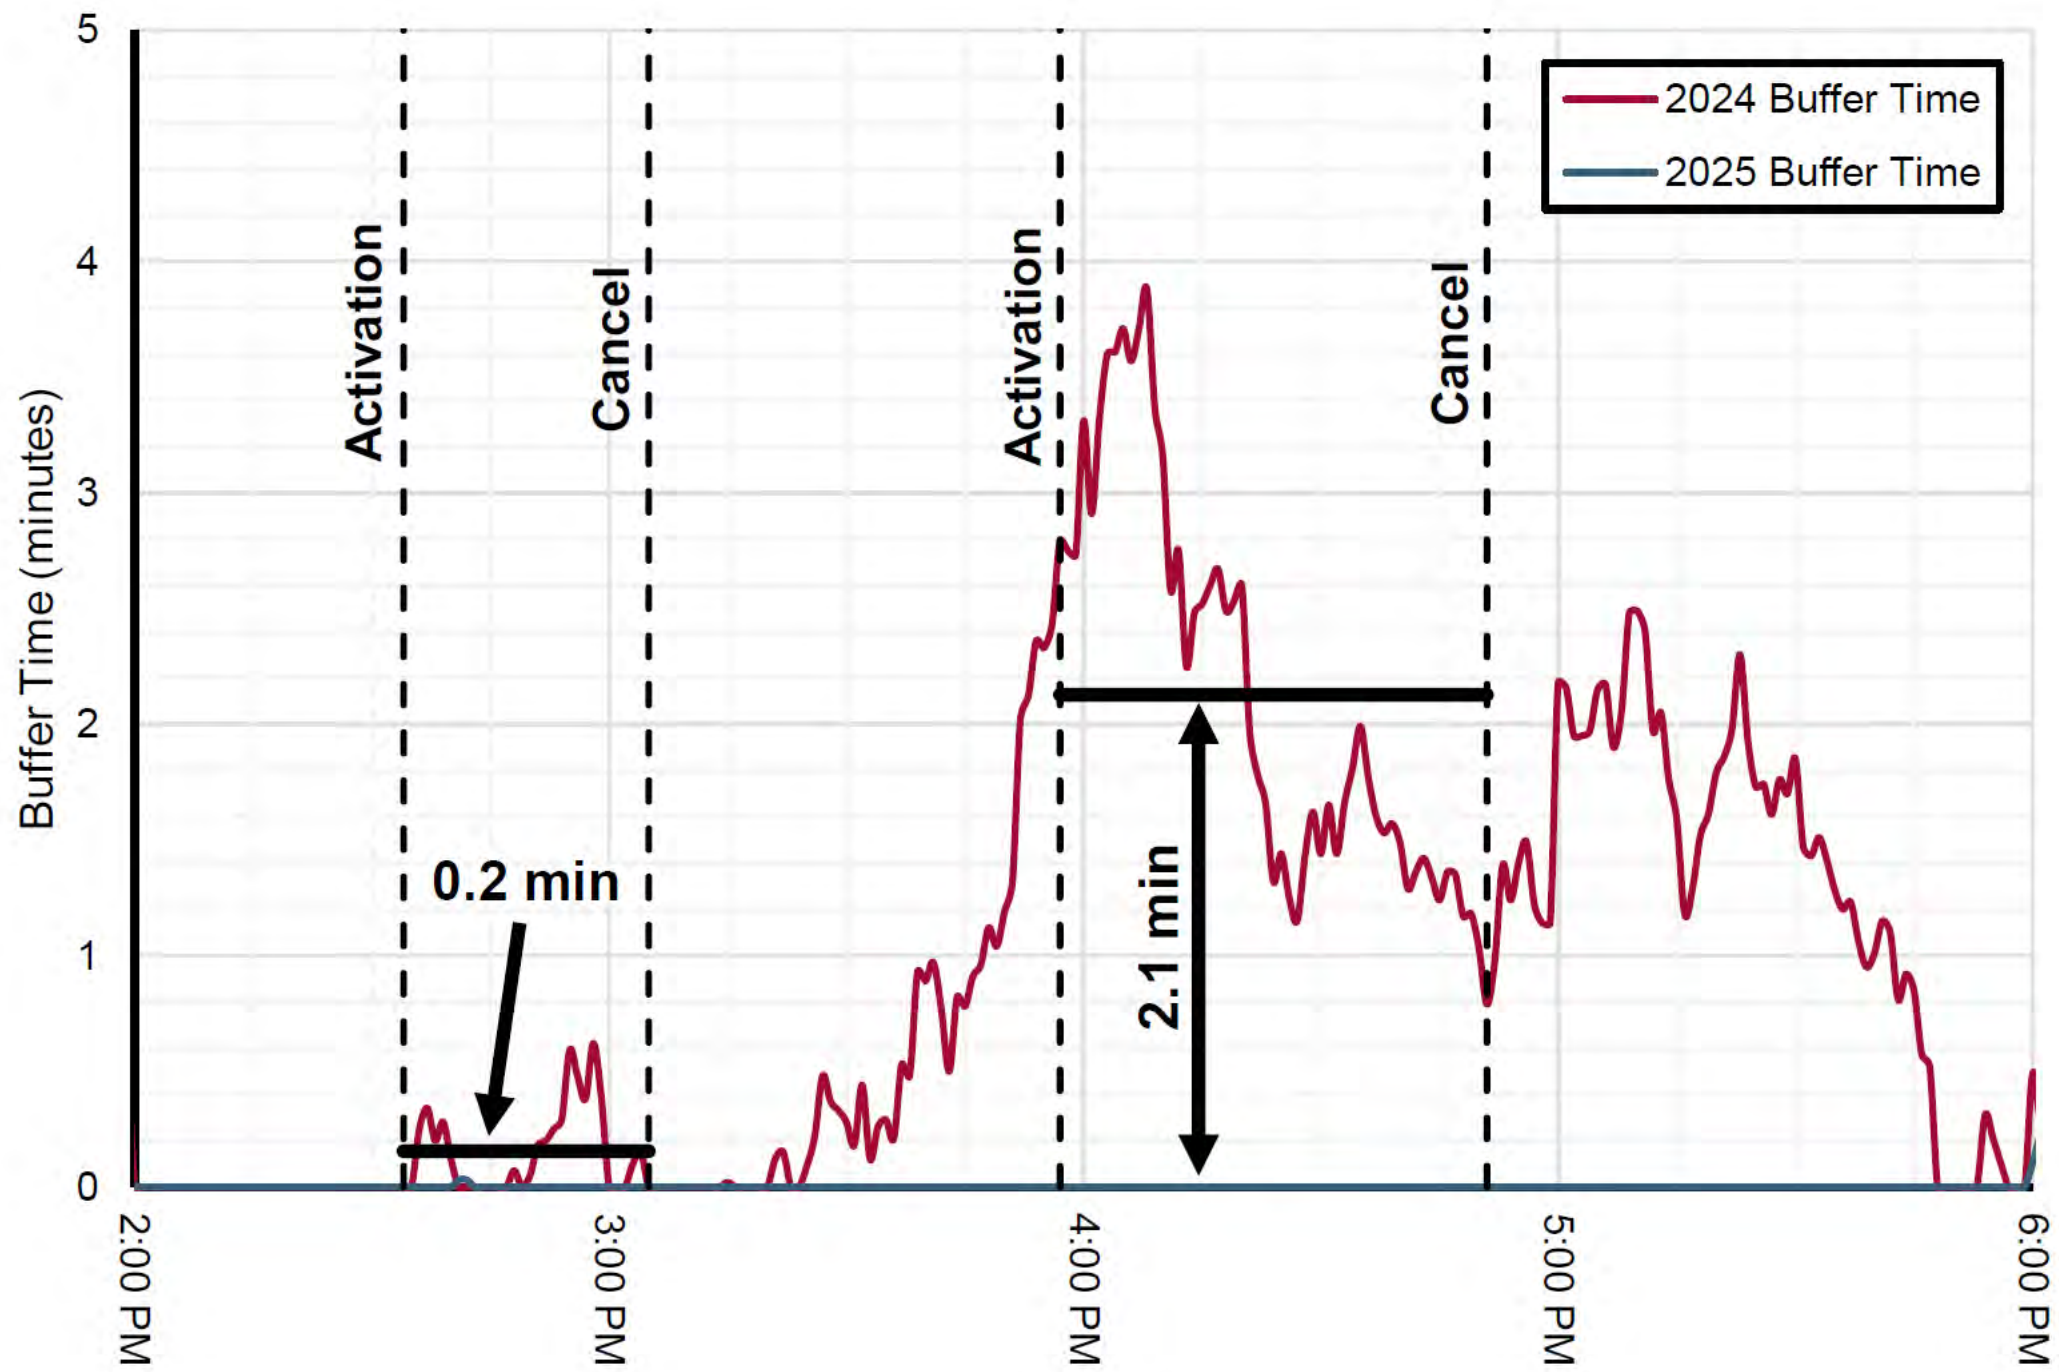

Command History from 2/4/25 to 4/30/25, 68 activations in the PM Peak Hour

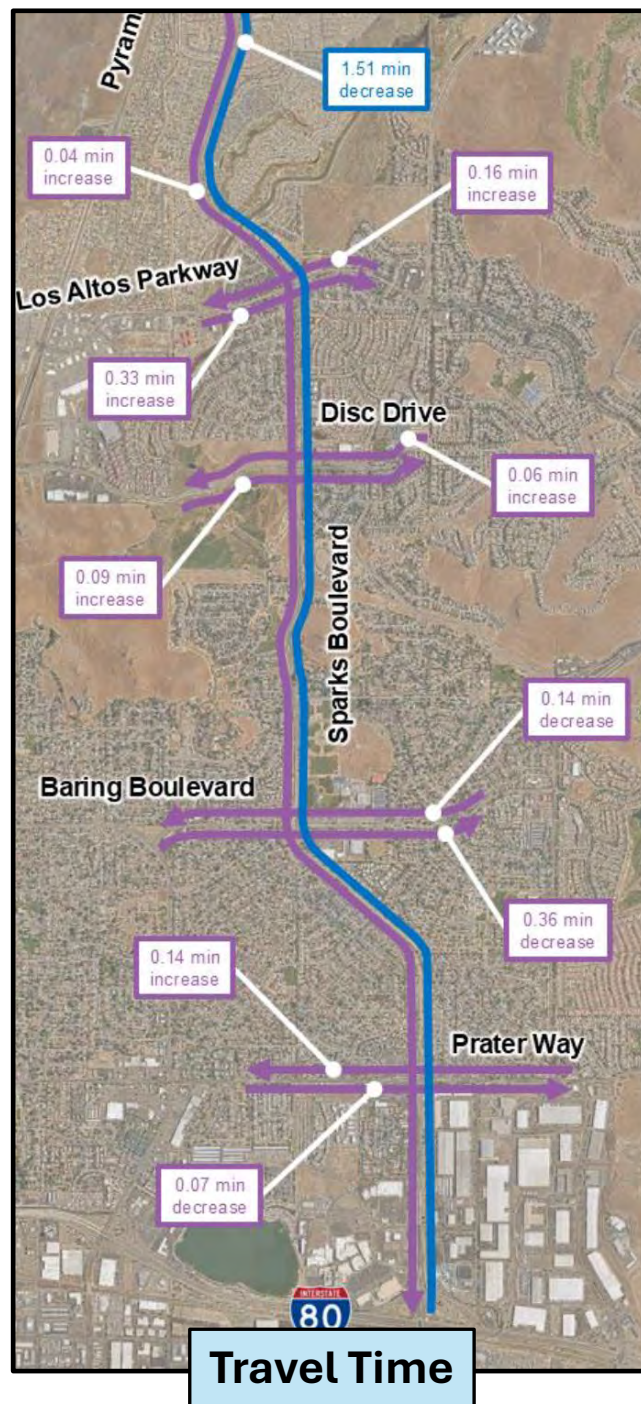

NB Sparks Boulevard Cancel Frequency

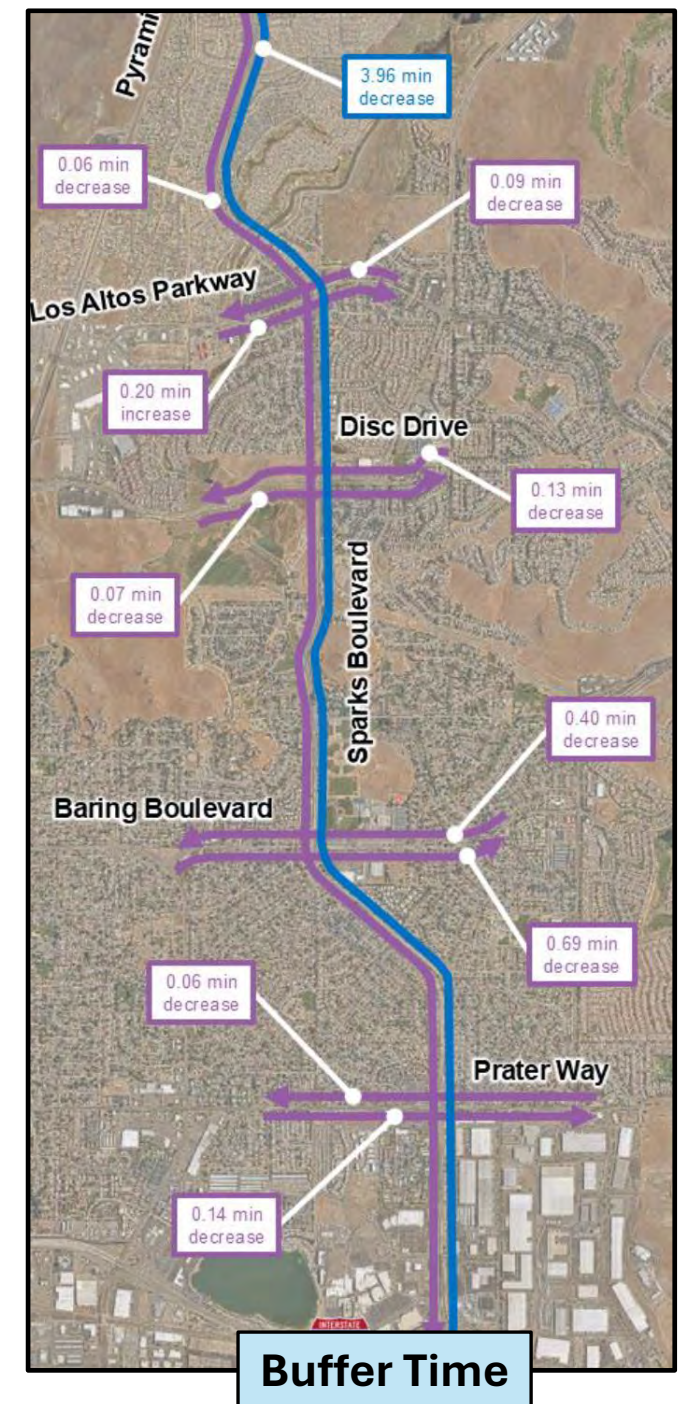

What about the side streets?

Lessons Learned

- LOTS of testing needed
- Virtual DMS was difficult
 - App store requirements
 - Public facing
 - There's already too many apps!
- Fiber communications needed
- Lots of potential benefits

Benefits

Scalable!

Reduced travel time and improved reliability

Coordinates data across jurisdictions

No sensors or permits required

Agencies control operations

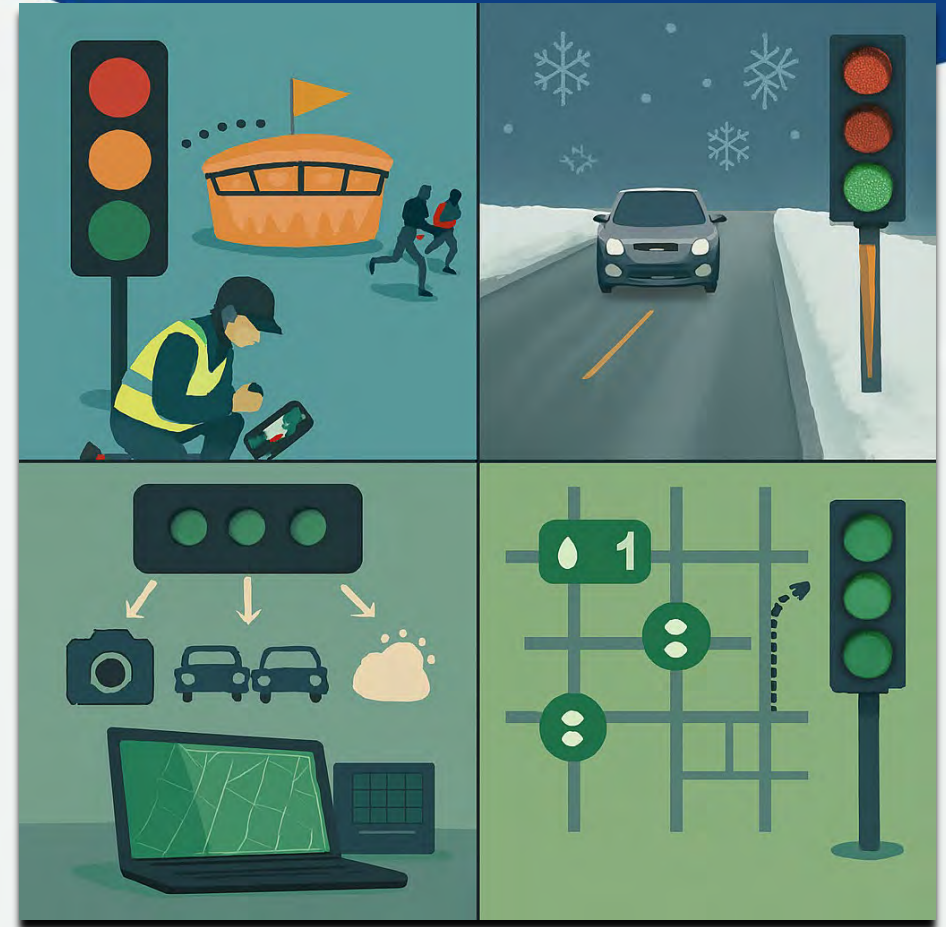

Recognitions

- 2025 ITE Mountain District TSMO Award
- 2025 ITE International TSMO Transportation Achievement Award

Next Steps

- Add more corridors
- Revisit virtual DMS
 - Push to established apps
- Special events
- Coordinate with pre-emption
- Investigate other data sources
 - Fleet vehicles
 - Weather data

Thanks to all involved

- RTC
- City of Sparks
- University of Nevada Reno
- Kimley Horn & Associates
- Altitude Signal
- Cubic
- INRIX
- University of Maryland – CATT Lab
- Fibertel

Thank You!

Building A Better Community Through Quality Transportation

Trips Data for Calibrating Travel Demand Models

Greg Jordan, Assistant to the Director
University of Maryland CATT Lab

Why make transportation models?

DOT agencies and MPOs build models to:

- **Evaluate the benefits & impacts of proposed projects**
- **Produce materials for partner agencies, stakeholders, and for public meetings**
- **Generate traffic flow data estimates for various investigations (including O/D tables for microsimulation models)**

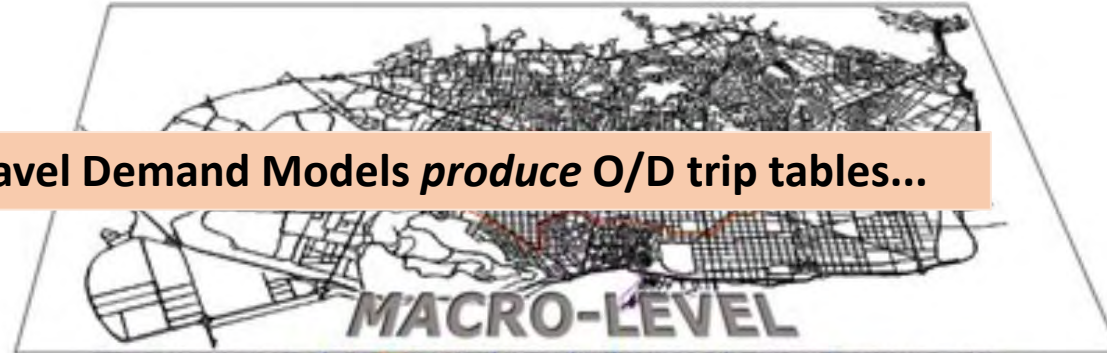

(Aimsun graphic)

MACRO region
(MPO area or
statewide)

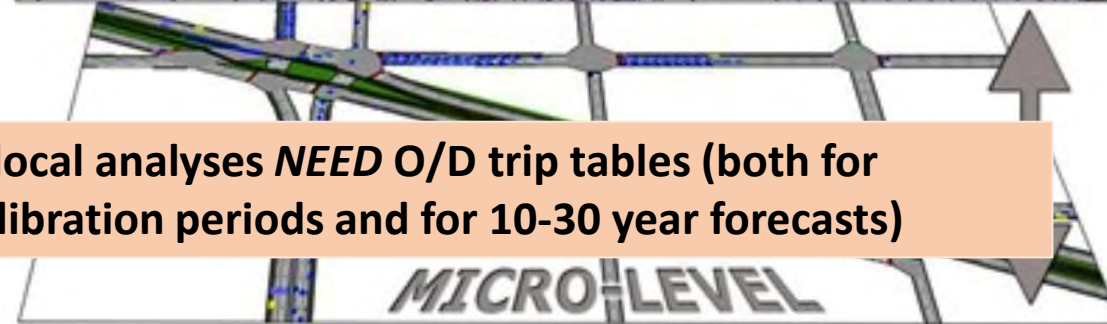

Symbiotic
relationship

MICRO area
(local project
area)

Travel Demand Models *produce* O/D trip tables...

...local analyses *NEED* O/D trip tables (both for
calibration periods and for 10-30 year forecasts)

Macro-model statewide example

Visualization of
traffic volume
forecast for 2040
across the State of
Tennessee

Tennessee Statewide Model Visualization

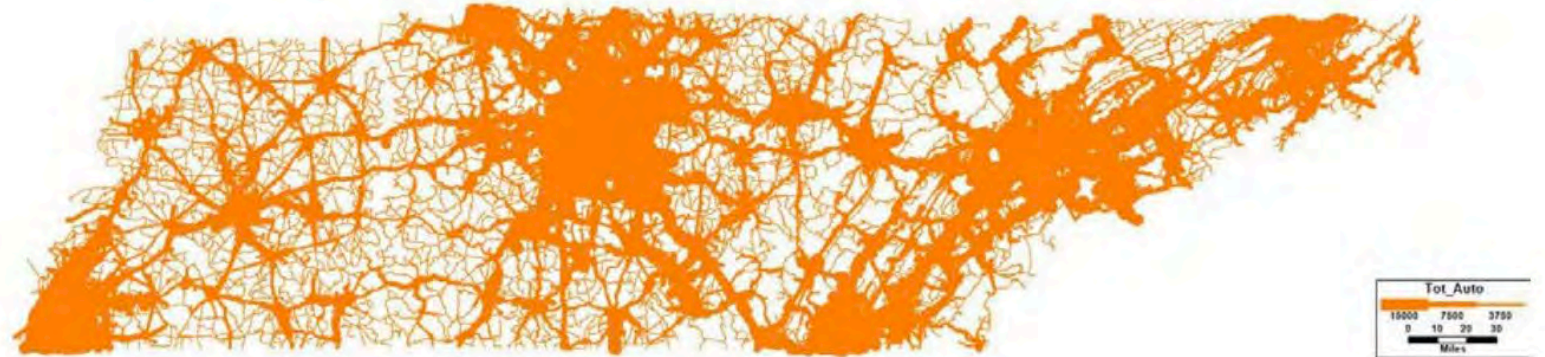

Figure 83: Auto's traffic volume on Tennessee's roads (2040)

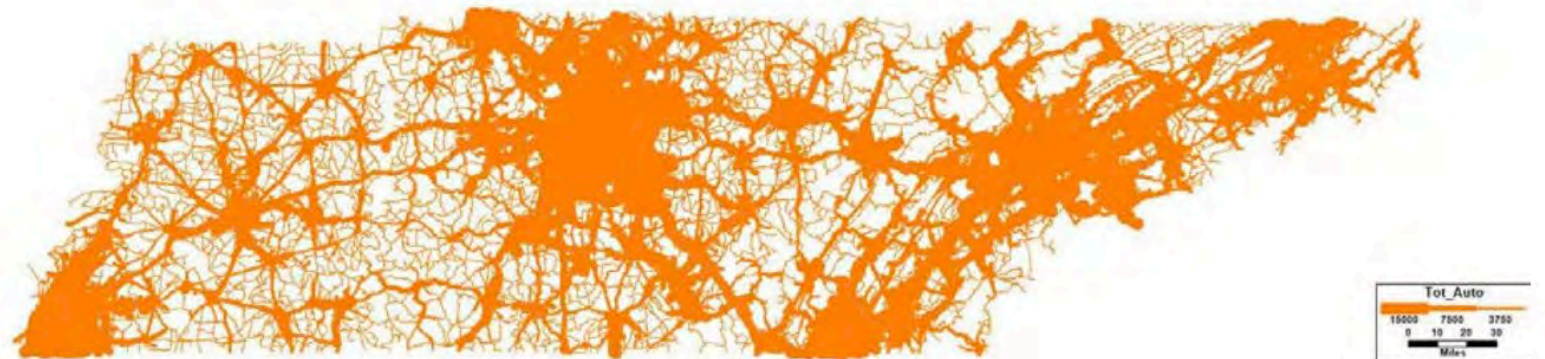

Figure 84: Total traffic volume on Tennessee's roads (2040)

INVESTIGATION by the Dallas – Ft. Worth MPO:

**North Central Texas
Council of Governments**

TAFT
*Transportation Analytical
Forecasting Tool*

A travel demand model is a system of complex computer programs that includes inputs of roadway and transit networks and population/employment data used to output maps, statistics, and reports.

Can probe O/D data be used to help calibrate or validate regional travel demand models (TDMs)?

**What goes
into a regional
model?**

INFORMATION “IN” to TDM:

- Travel / household surveys & employment data
- Land-use patterns (commercial / industrial / residential, etc.)
- Population demographics / census data
- Highway and transit network infrastructure characteristics
- Network usage data (e.g., volumes, NPMRDS speeds, etc.)
- Forecasts for all of the above

Regional Travel Demand Model
(TDM)

**What comes
out?**

Regional Travel Demand Model
(TDM)

INFORMATION “OUT” from TDM:

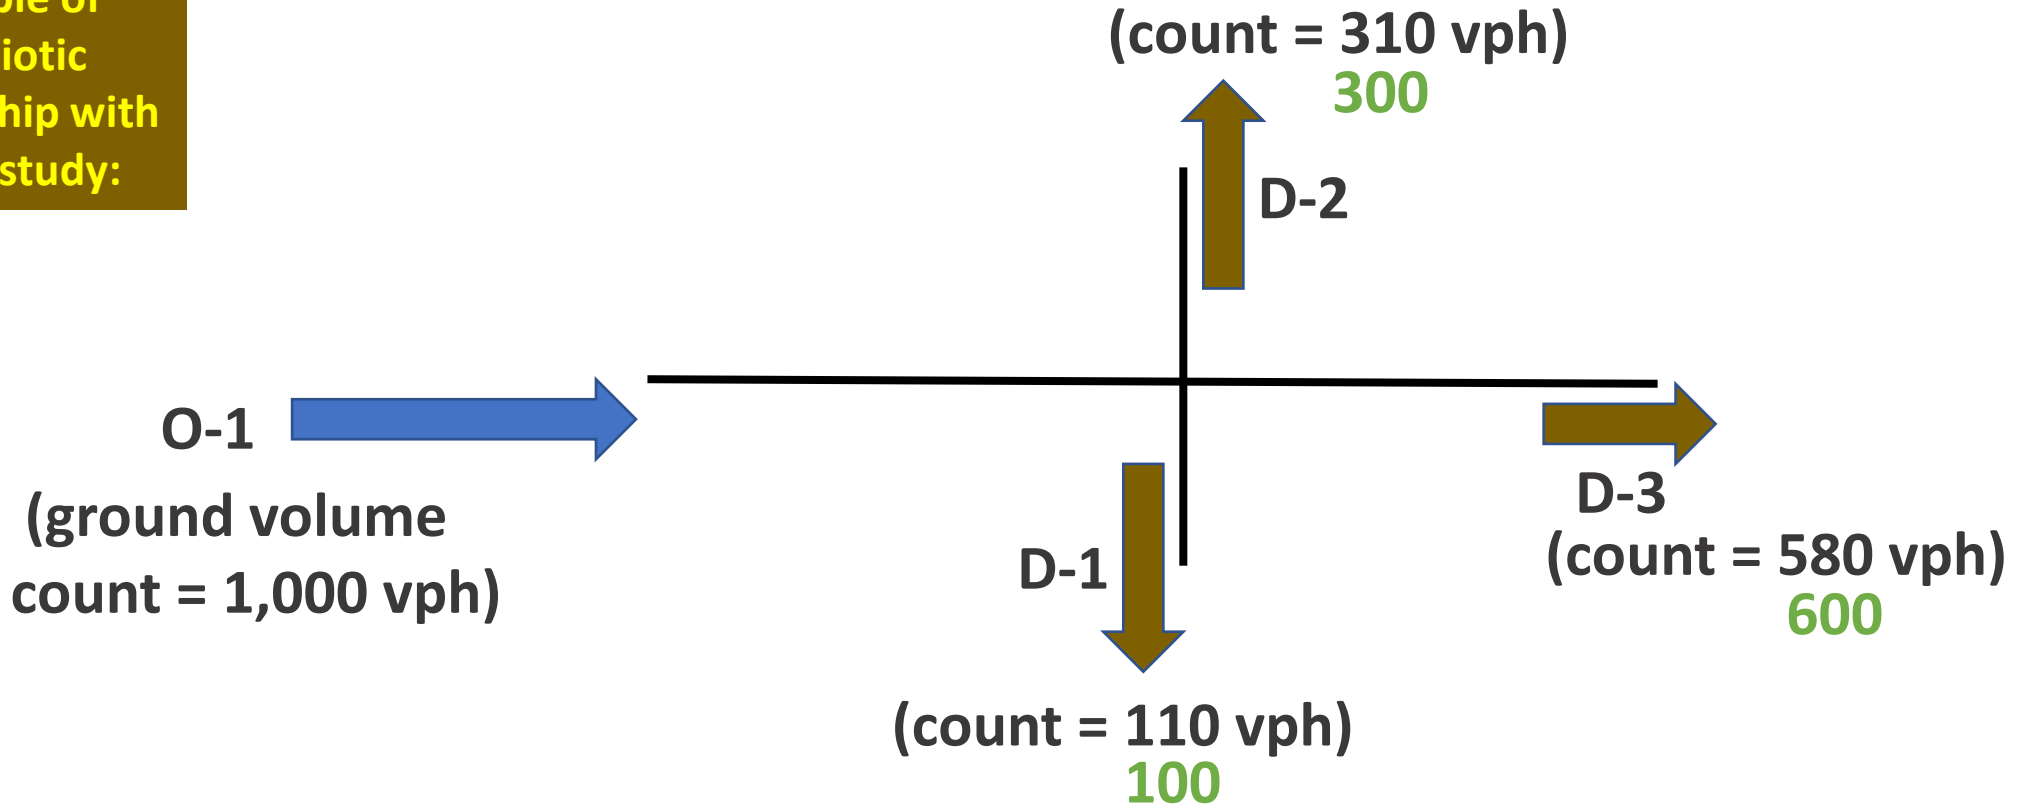

- Origin – Destination (zone-to-zone) trip counts, by mode
- Estimated vehicle volumes & speeds for highway segments
- Person-trip counts on transit, by link
- Pollutant emission estimates from mobile sources

Can probe O/D data be used to help calibrate or validate macro-level travel demand models (TDMs)?

Traditional validation method:

Compare volume, speed or travel time estimates produced by the model to easily-collected ground data

Example of
symbiotic
relationship with
a local study:

Regional model estimates these splits:

- 10% to D-1 = 100 vph
- 30% to D-2 = 300 vph
- 60% to D3 = 600 vph

1) Regional model is valid in this location

2) Therefore can provide trustworthy forecasts for the local model

Can probe O/D data be used to help calibrate or validate macro-level travel demand models (TDMs)?

Traditional validation method:

Compare volume, speed or travel time estimates produced by the model to easily-collected ground data

Better method, where feasible:

Compare O/D trip tables produced by the model to field-measured (hard-to-get) O/D trip tables
(license-plate matching; tracing from overhead video; match Bluetooth IDs)

Example: Comparison of model O/D trip tables to O/D data from overhead (helicopter) imagery

Case Study: NCTCOG (the Dallas / Ft. Worth MPO)

NCTCOG objective

Given that INRIX's *Trip Paths* dataset is funded for MPO use by Texas DOT, is this a suitable source of data for validation of the region's 'TAFT' travel demand model?

TAFT
Transportation Analytical
Forecasting Tool

Validation testing of TAFT and probe O/D datasets:

1. (Done): A corridor-based microsimulation model used RITIS O/D trip tables for a successful calibration (calibration with TAFT O/D table was *not* successful)
2. (Done): LOCUS O/D trip tables reasonably matched TAFT trip tables
3. (In-process): RITIS O/D trip tables (so far) are reasonably matching TAFT trip tables

Trip Paths trajectory datasets via Trip Analytics in RITIS

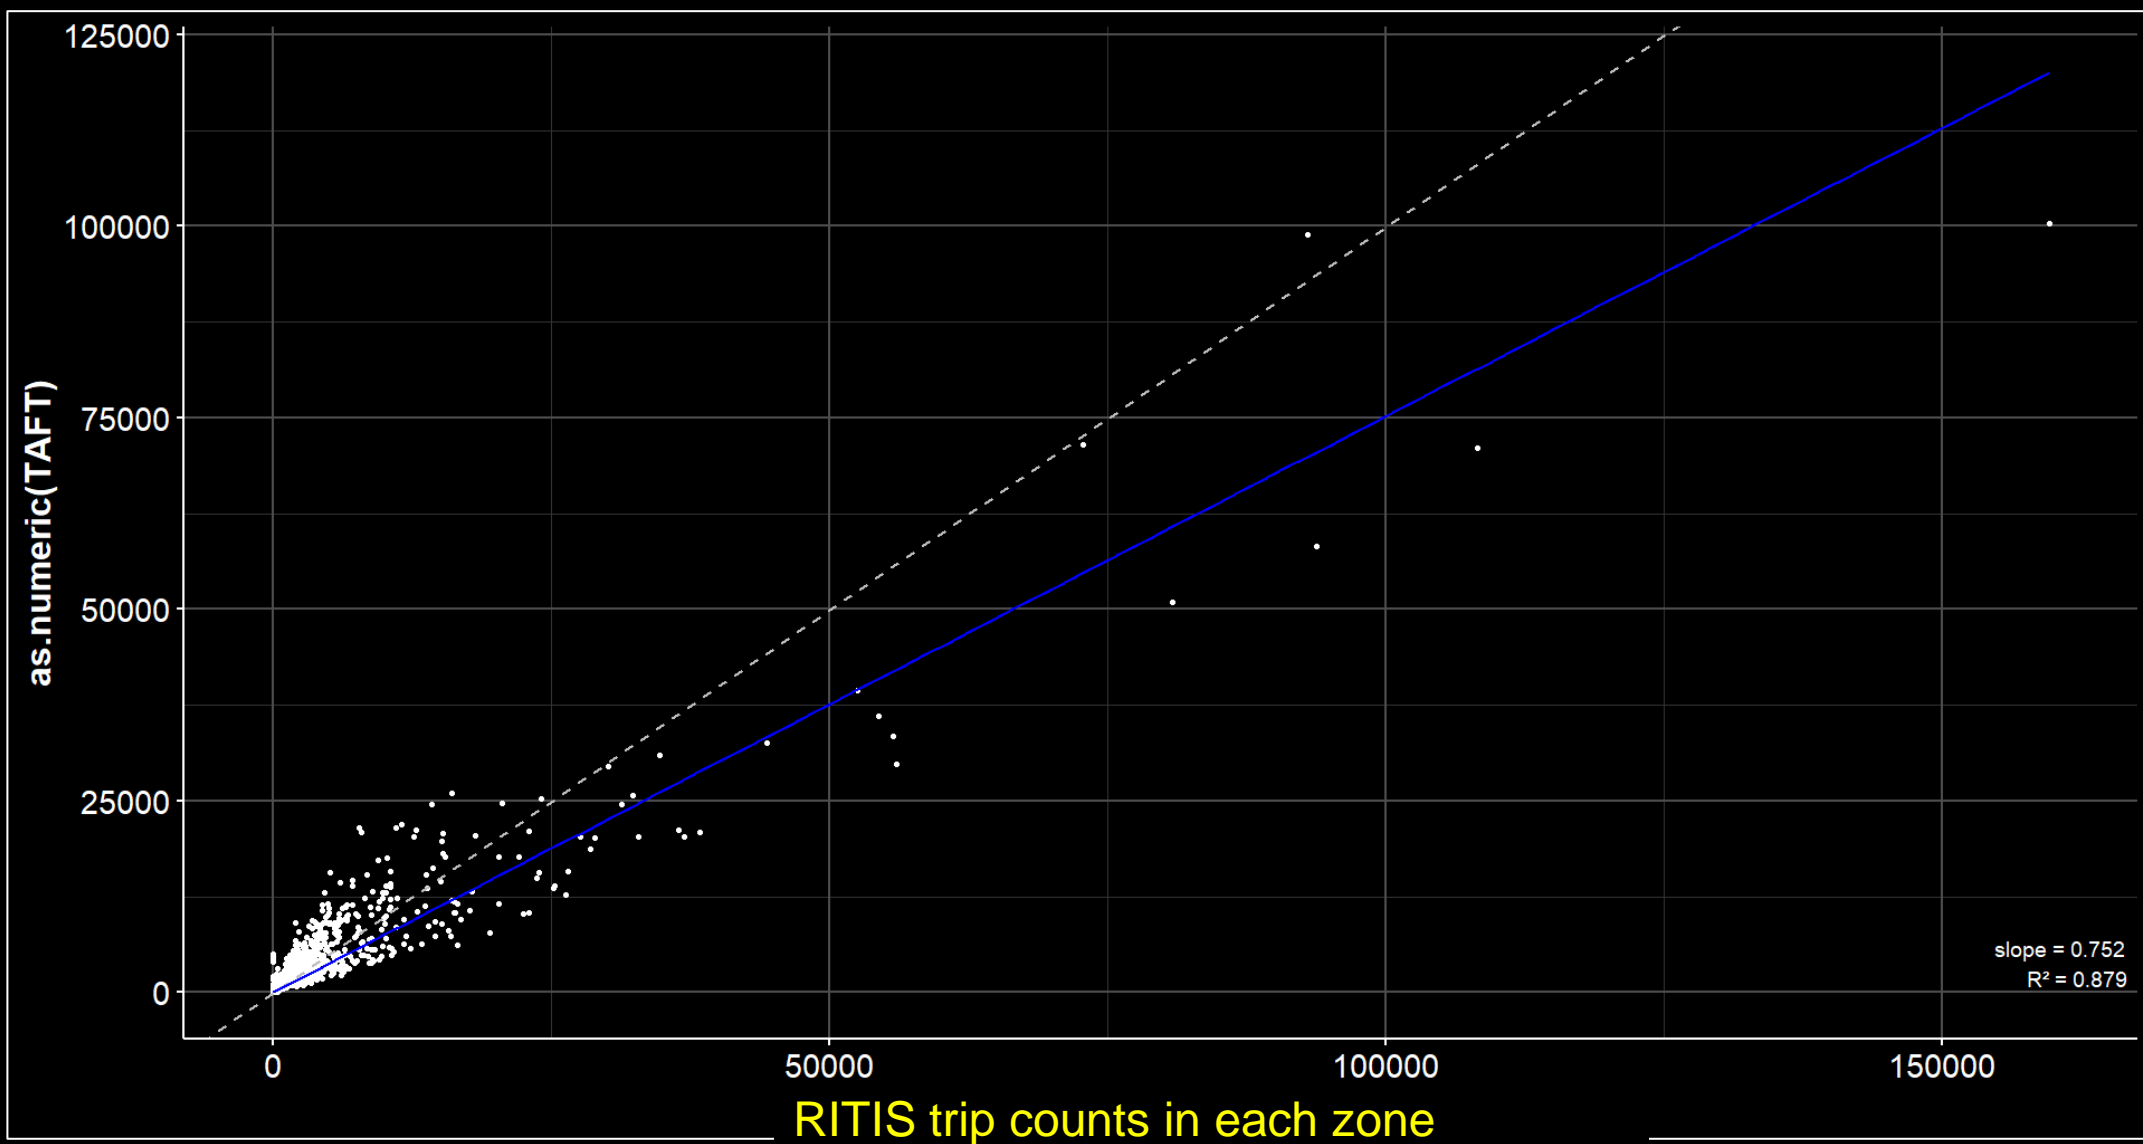

[INTRODUCTION](#) [TOOL CATALOG](#)

**REGIONAL INTEGRATED
TRANSPORTATION INFORMATION SYSTEM**

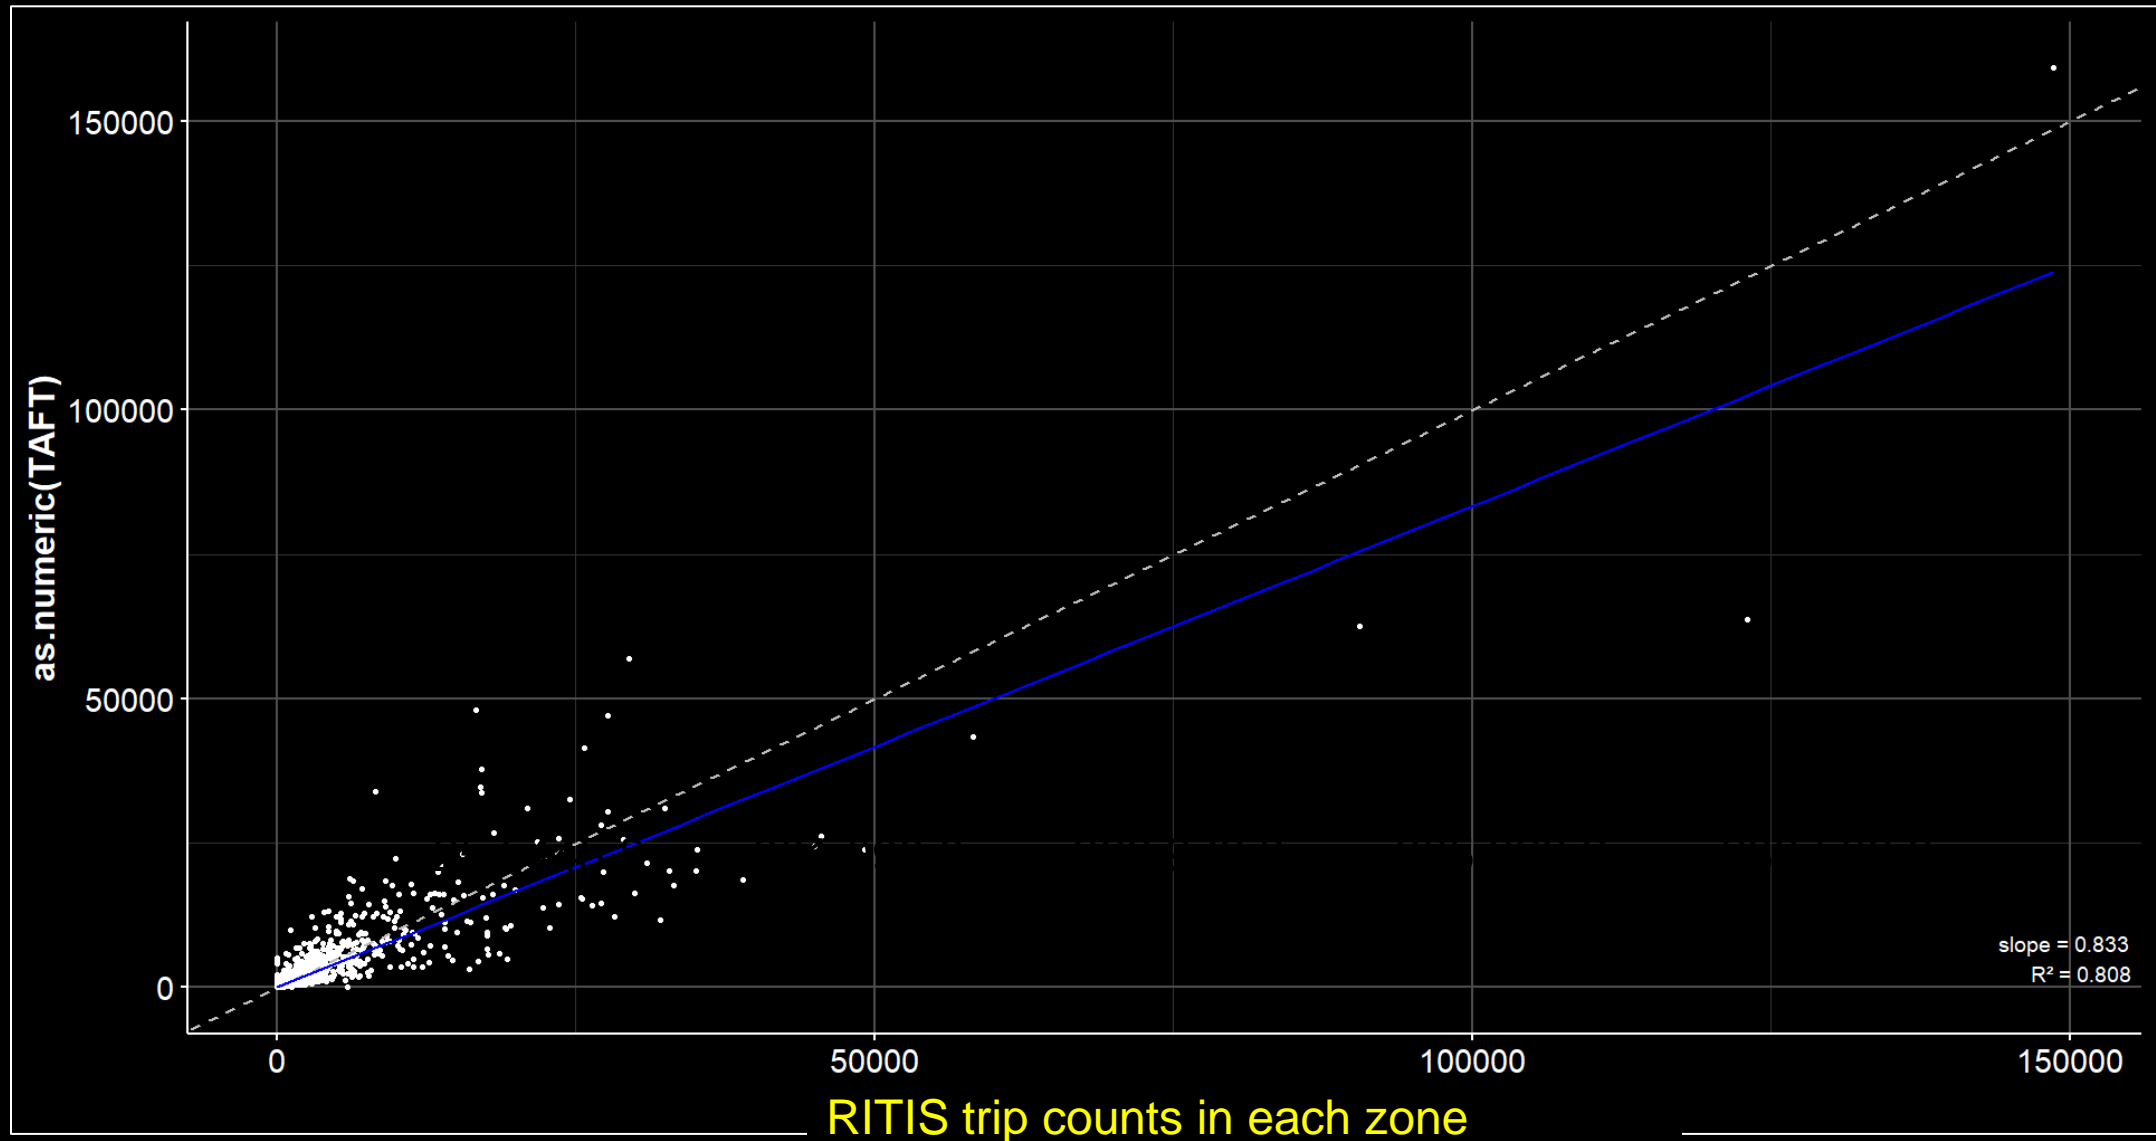

Zone-wise consistency check: Probe Data vs TAFT (origins / production)

TAFT trip
counts in
each
zone

Zone-wise consistency check: Probe Data vs TAFT (destinations / attraction)

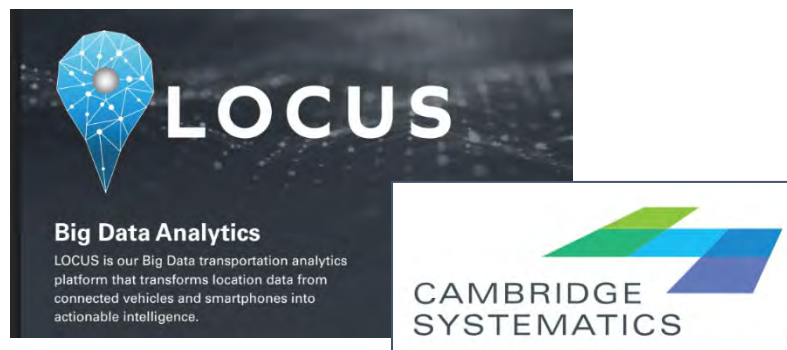

TAFT trip counts in each zone

Validation testing of TAFT and probe O/D datasets:

1. A corridor-based microsimulation model used RITIS O/D trip tables for a successful calibration (calibration with TAFT O/D table was *not* successful)
2. LOCUS O/D trip tables reasonably matched TAFT trip tables
3. RITIS O/D trip tables are reasonably matching TAFT trip tables (so far / ongoing)
4. (In process) Trip travel times from RITIS O/D tables very close to TAFT travel times

DEMONSTRATION OF NCTCOG USE OF TRIP ANALYTICS

The screenshot displays the Trip Analytics web application interface. At the top, a dark navigation bar contains the "Trip Analytics" title with a red arrow, the user login "rtu@nctcog.org", and links for "My Studies", "Help", "Switch data set", and "Logout". Below this, a large black banner reads "Welcome to Trip Analytics" and indicates the current data set is "Texas (pre 2024)". A "What's New" badge shows the date "08/06/2025". The main content area features two prominent buttons: "CREATE A STUDY" and "MY STUDIES", each with a green icon and a "START" button. The background of the interface is a light blue map of Texas.

Testing with the INRIX Trip Paths data products:

- A database with millions of actual, real-world vehicle trips (commonly, a 10-15% penetration rate for trucks)
- Data sources are GPS pings snapped to roadway networks; sources include cell phones (in autos), connected vehicles and trucking fleets
- Each trip has time & location stamps of where it started, where it ended, and the pathway road segments (endpoints mapped to a 200M grid for reduced precision (for carrier privacy))
- A statewide dataset typically includes all sampled trips that touched that state (full extents are provided for all trips, incl. out-of-state legs)

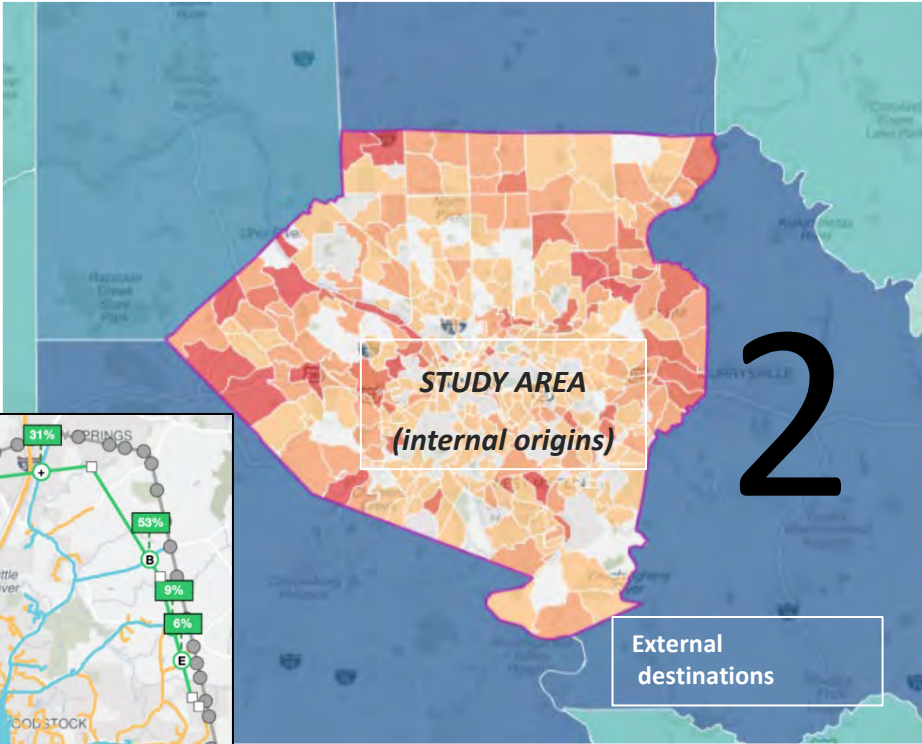

Method: Find similar trips based on where they went there, and when they went there; and which ones went there; and use those trips to make these reports for insights:

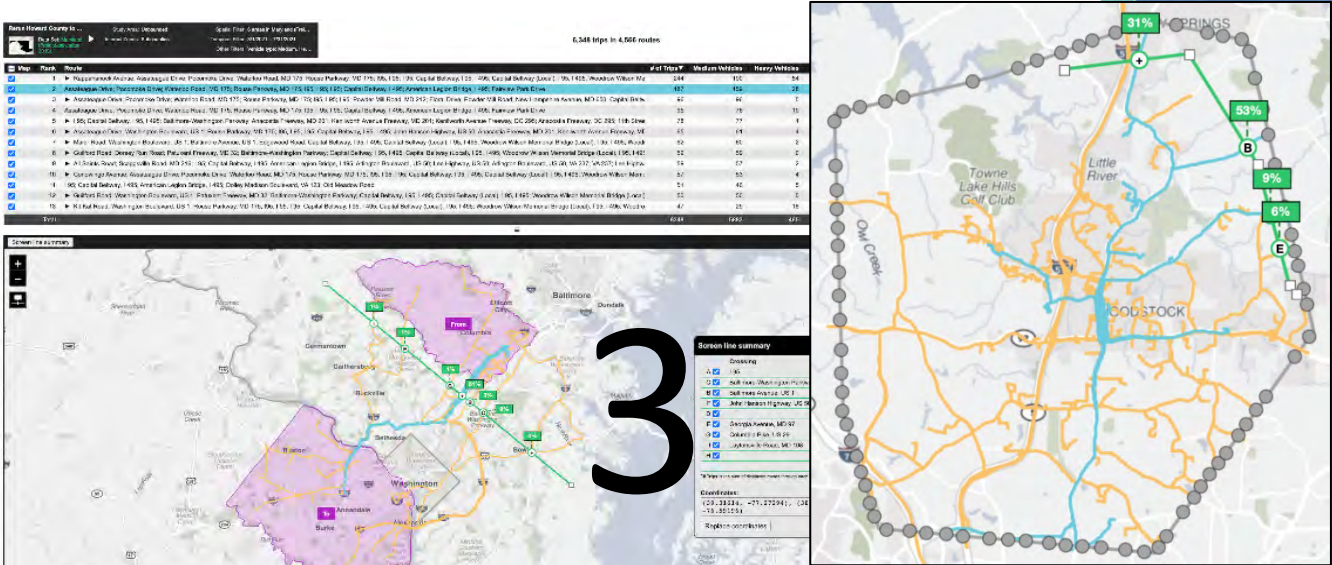

1. OD Matrix

		Georgia

▼ Pathway Options

Trip pathways are the segment-by-segment routes that vehicles followed from start to end. These enable the use of timestamps along pathways for precise temporal filtering (PTF), plus the other capabilities listed below (but require significantly more processing time).

☐ **Use pathways** (for micro-level queries)

Use pathways to report OD gates as origins or destinations; or to find trips that cut through a spatial filter polygon (e.g., through filters, road sections or select-links, etc.). The number of trips tested is capped at about 500,000.

☐ **Generate Route Map** (additional processing time)

Pathways enable creation of Route Map reports & tables, capped (for browser performance) at 10,000 routes. If unchecked, only OD Matrix and Zone Map reports can be produced.

☒ **Don't use pathways** (for macro-level queries; fastest processing)

The locations and times of the trips' endpoints will be the only basis for spatial and temporal filtering, and for assigning origins and destinations. There is no cap to the number of trips considered for each query. Only OD Matrix and Zone Map reports can be produced. The following are not enabled: use of OD gates to report origins and destinations; PTF (precise temporal filtering); and cut-through / select-link spatial filtering.

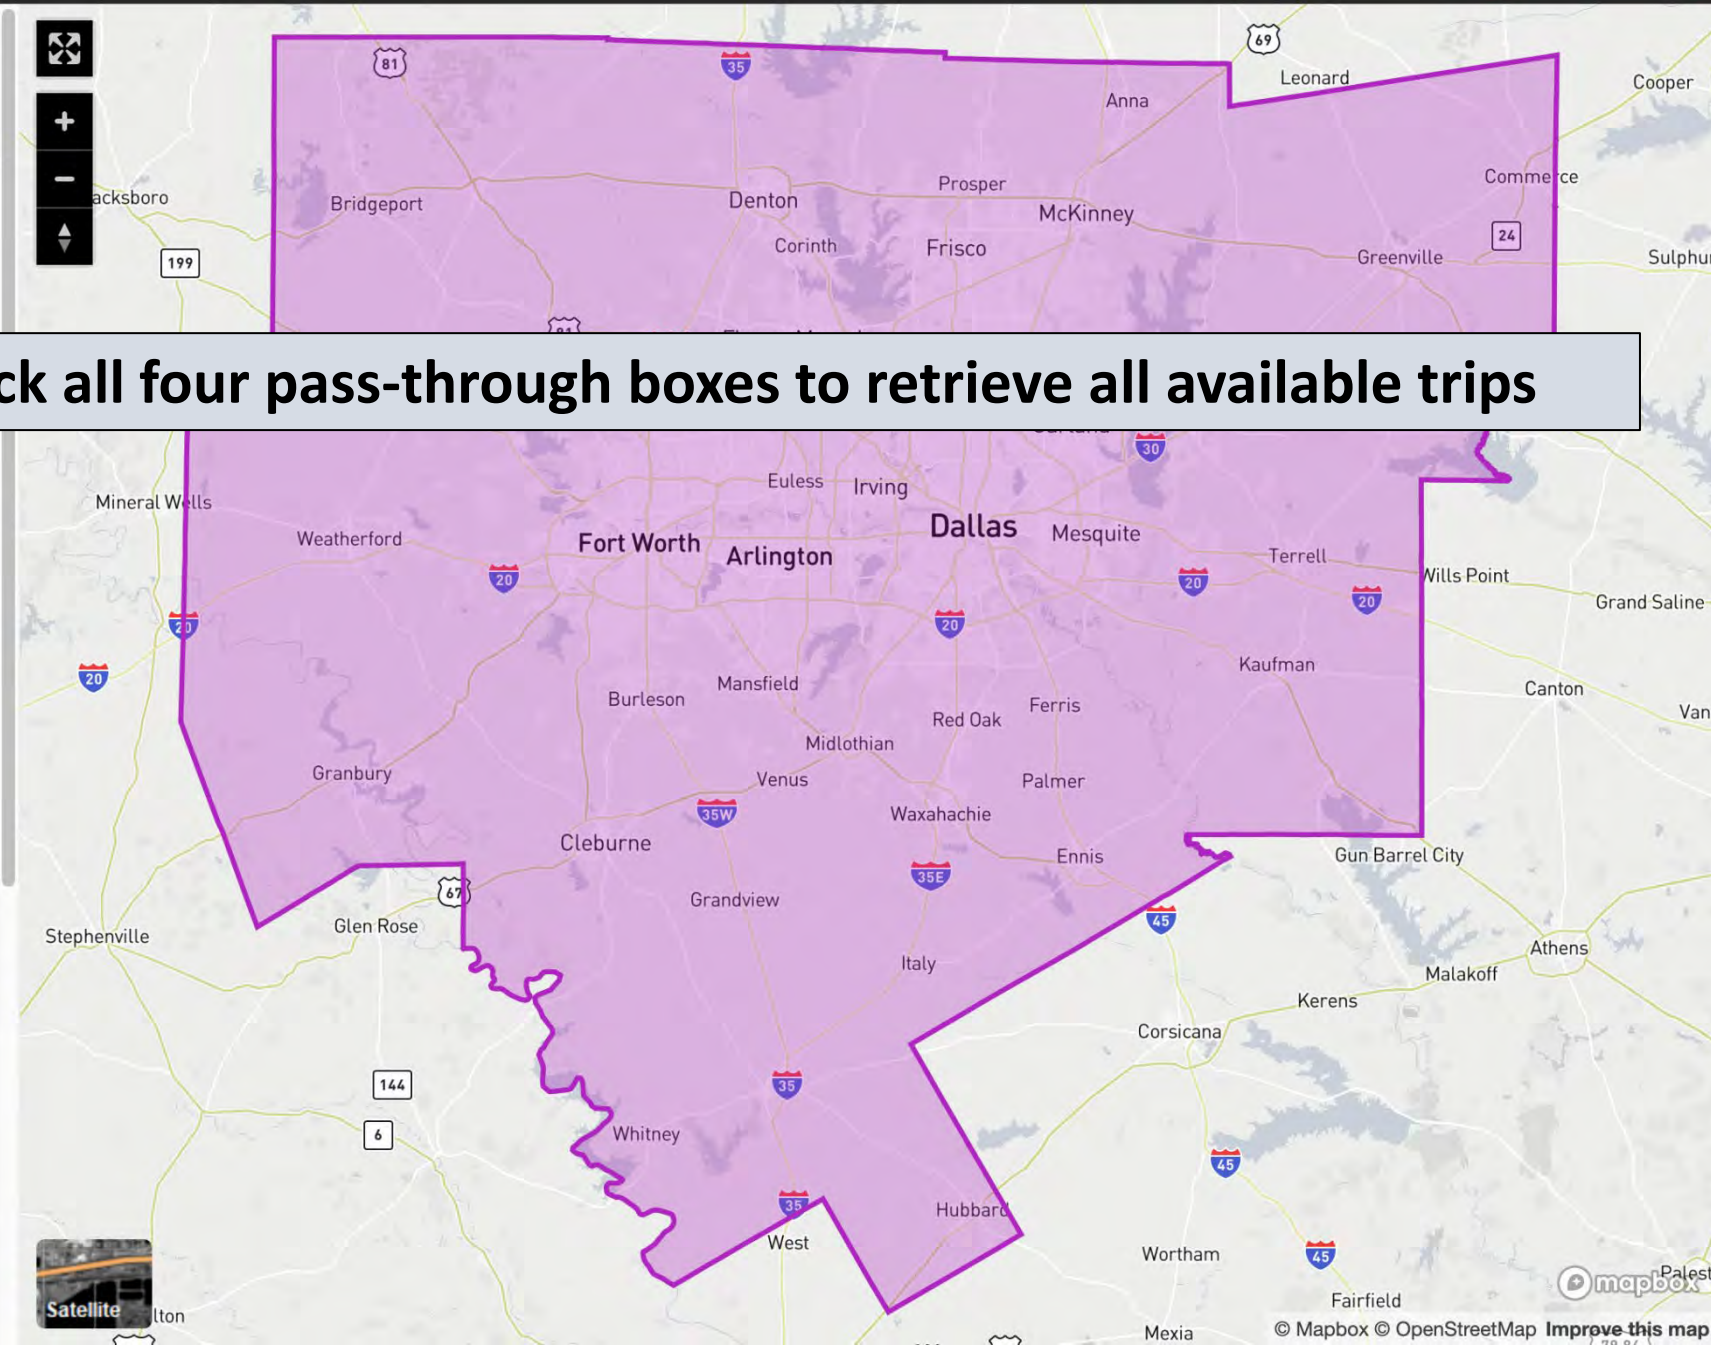

[Next](#)

Generation of a query using the study area as a spatial filter

Don't use pathways to find trips (only use coordinates of start- and endpoints); this produces much larger sample sizes

Check all four pass-through boxes to retrieve all available trips

Choose a time range to analyze data in.

What next?

The NCTCOG evaluation is ongoing. When completed, a presentation will be made by the NCTCOG investigators

Questions:

Greg Jordan (gjordan1@umd.edu)

Arash Mirzaei (amirzaei@nctcog.org)

Ran Tu (RTu@nctcog.org)

Calibration vs. Validation?

Calibration

- Adjust model parameters and assumptions so that outputs are consistent with field measurements or other trusted metrics

Calibration example:

*Adjust the model so that it produces **volume** counts – and/or **travel time** estimates – that are consistent with field volume counts or the NPMRDS*

How are calibration and validation different?

Validation

- Compare calibrated model outputs to trusted metrics that were not used for model development or calibration

TDM Validation example 1:

*Collect field **volume counts** at specific locations (or across screen lines, or along freeways) that were not used for model development or calibration, and compare to model outputs.*

*Also commonly used: **Corridor travel times; trip lengths; bottleneck locations***

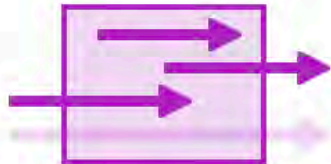

▼ Spatial Filters (1)

Choose one of the following spatial filters. This geography will be used to further filter out trips that don't interact with it.

Use the study area as a spatial filter ▾

Select pass-through settings for this filter:

- | | |
|---|---|
| <input checked="" type="checkbox"/> Started Inside | <input checked="" type="checkbox"/> Ended Inside |
| <input checked="" type="checkbox"/> Started Outside | <input checked="" type="checkbox"/> Ended Outside |

+ Add 2nd filter for a From/to query

Next

Because "Don't use pathways" was selected, only trips that started and/or ended inside the spatial filter can be found.

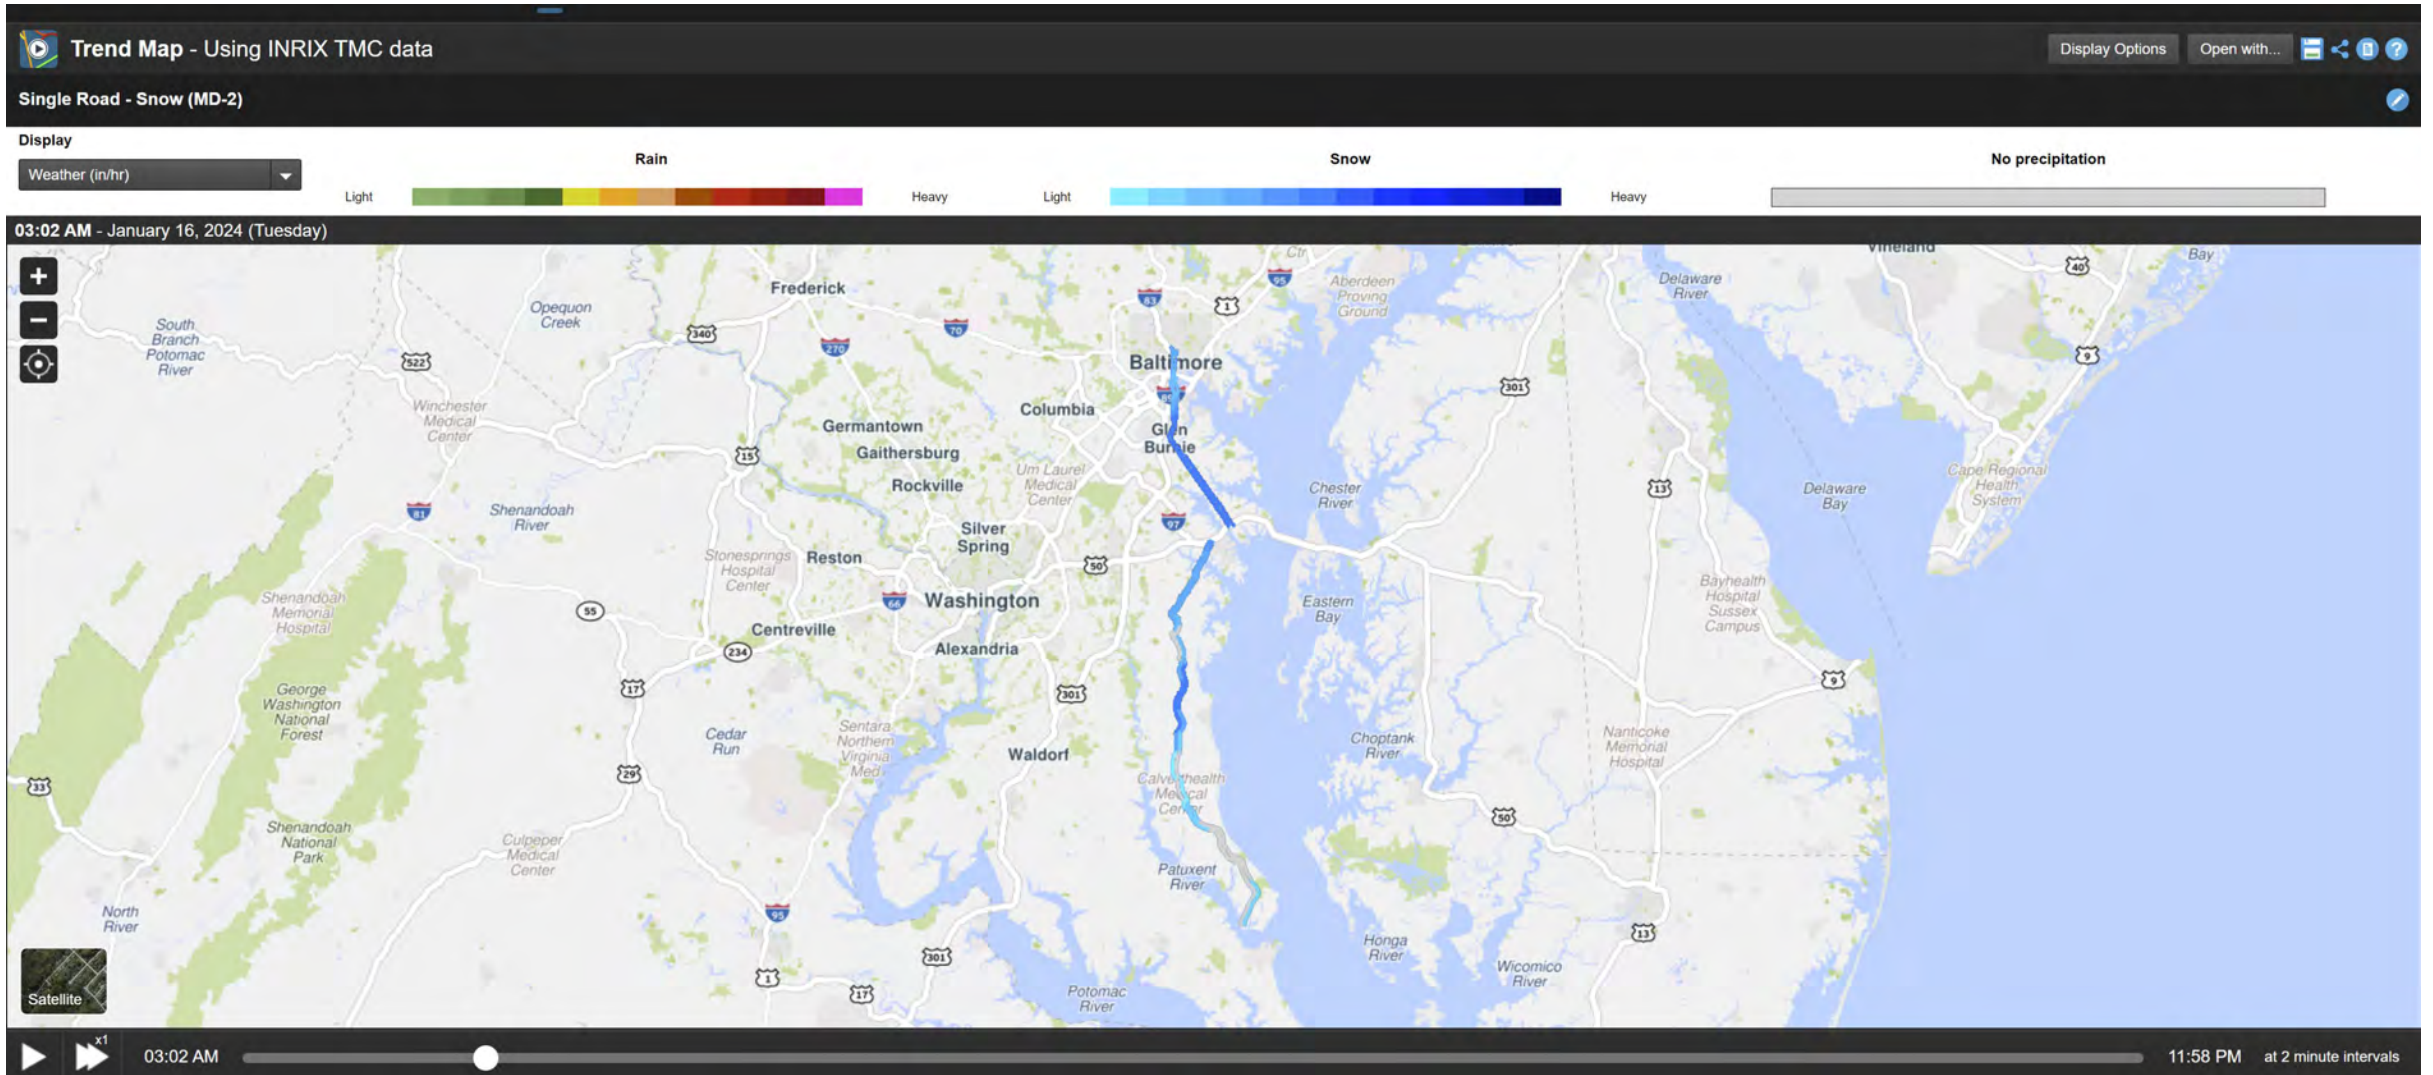

Review of New Features and Capabilities along with work in progress

Work Zone Performance Report Update

- Remaining major features:
 - Comparison line chart page
 - Road diagram component
 - Event integration into report visualizations
 - Query form
 - Work zone event linkage to tools across RITIS

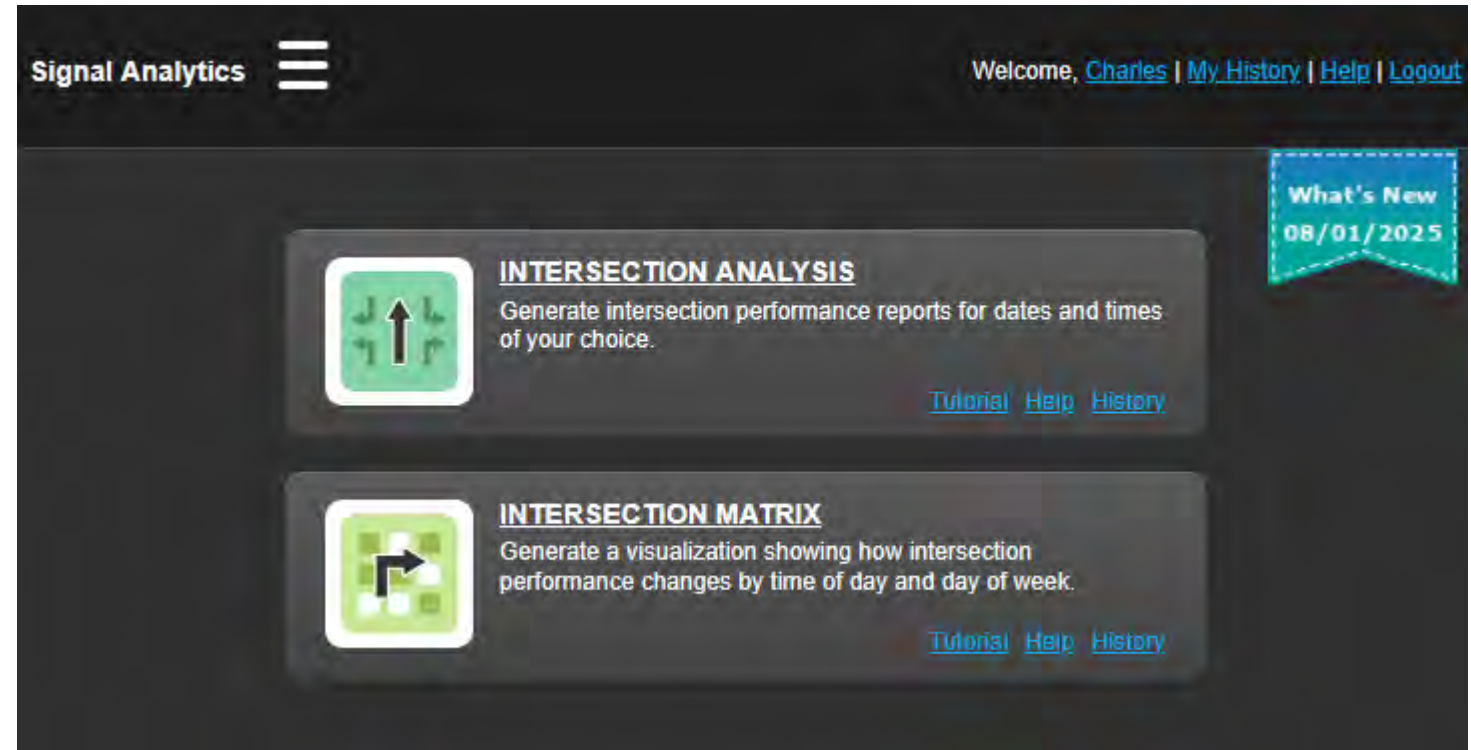

Two-Factor Authentication (end of the year)

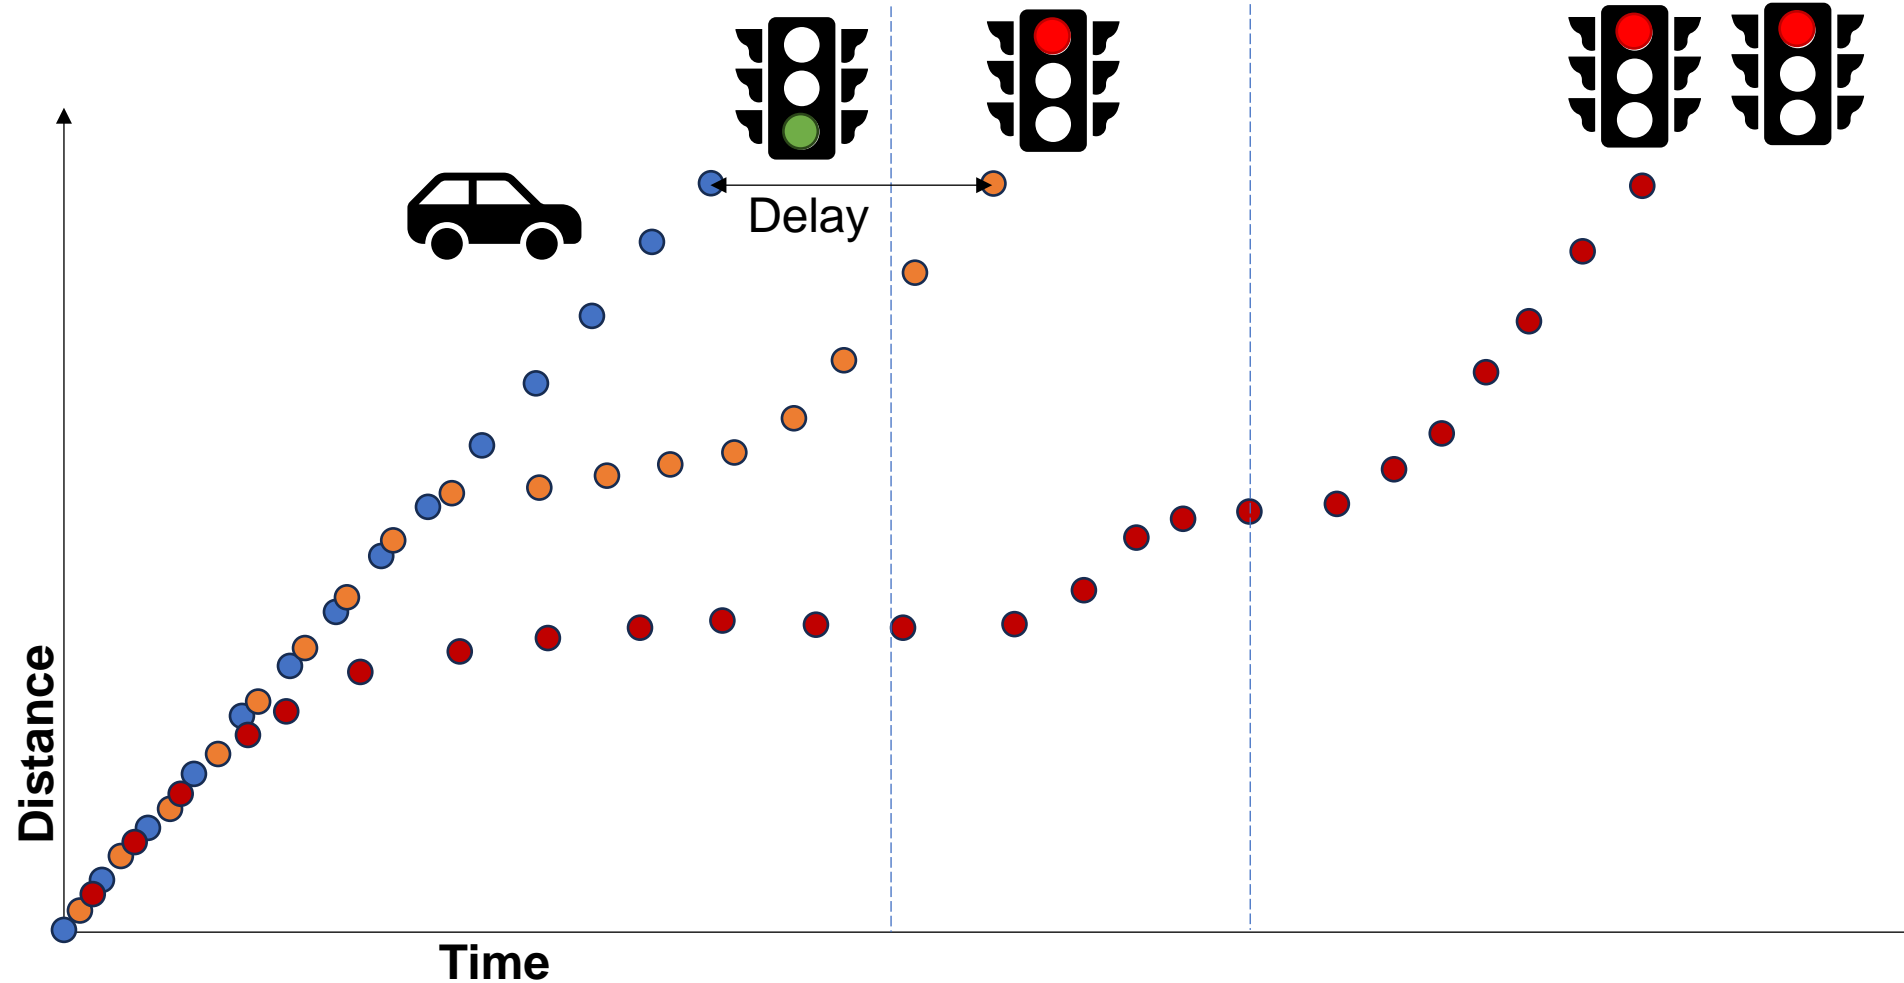

Signal Analytics
(New & Coming Soon)

Signal Analytics: new and coming soon

- Simple use cases
- Recently added features
 - Intersection Analysis presets
- Tools on the way
 - Signals Templates
 - Trend Charts

Signal Analytics uses trajectory data to determine traffic signal performance

Intersection Analysis

Intersection Analysis reports show key performance metrics per movement on selected intersection in tabular format, and allows for deeper dives using a map and intersection breakdown diagram.

- Select intersections by road name or directly from the map**

Select a region: Maryland

Use the controls on the map to define your intersection set. Controls with a "+" allow you to add intersections while controls with a "-" allow you to remove intersections from your selection.

Road

+ Add intersections
- Create a time period to analyze**

Note: Reports examining dates after June 1, 2023 are based on a new model with new data. As a result, reports can only be generated using one model. Use caution when comparing performance results for periods before this date with those after this date.

08/28/2025 - through - 08/28/2025

+ Add another date range
- Select days of week**

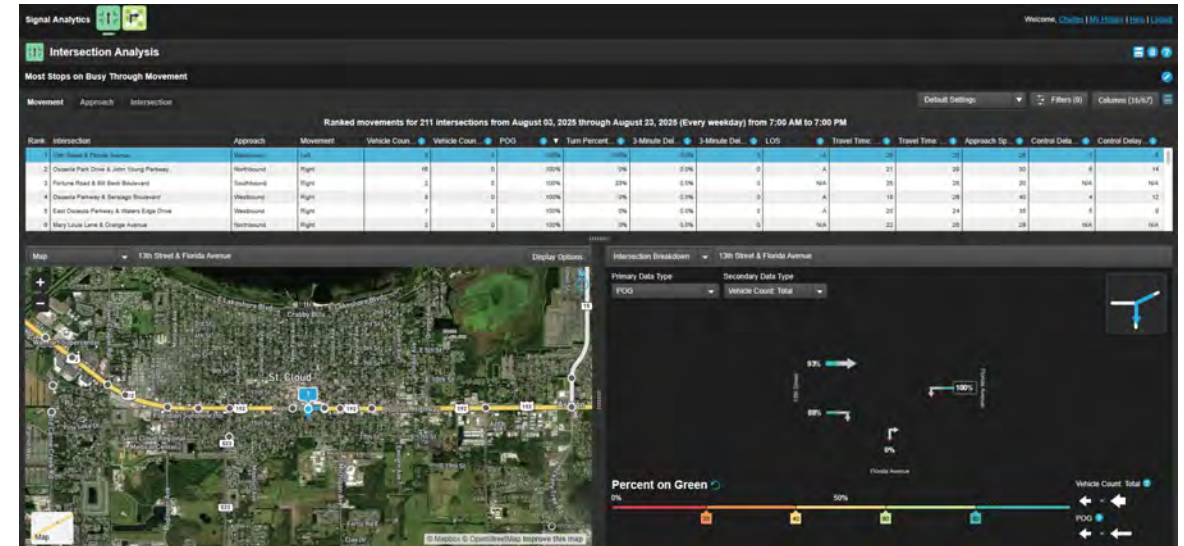

Sun Mon Tue Wed Thu Fri Sat
- Select time of day**

12:00 AM - 12:00 PM - 12:00 AM

12:00 AM 12:00 AM

+ Add another time of day
- Provide a title for this report (optional)**
- Notes (optional)**

+ Add notes

Step 1: Build your query

Step 2: View and interact with your report (including applying filters)

Use case: Longest Delays Late Night

- High delays could be caused by stuck detection, or could be opportunities to improve timing
- **Query settings:**
 - Most recent two weeks of data
 - Weekdays only
 - 12:00 AM – 5:00 AM
- **Filters to include:**
 - Vehicle Count: Total → Greater than 5
 - Movement → Contains left
 - Movement → Contains through

- **Results**
 - Look for control delays higher than 45-60 seconds
 - Ask yourself: “Is this reasonable or unexpected for this movement?”

Use case: Highest Speeds on Approach

- High speeds approaching signals could indicate potential safety issues.
- **Query settings:**
 - Most recent two weeks of data
 - All days of week
 - 12:00 AM – 6:00 AM
 - 6:00 PM – 12:00 AM
- **Filters to include:**
 - Vehicle Count: Total → Greater than 100
 - Movement → Contains through

- **Results**
 - Look for higher differentials between average and max approach speeds.
 - Ask yourself: “Should yellow-red clearance times for these intersections be adjusted?”

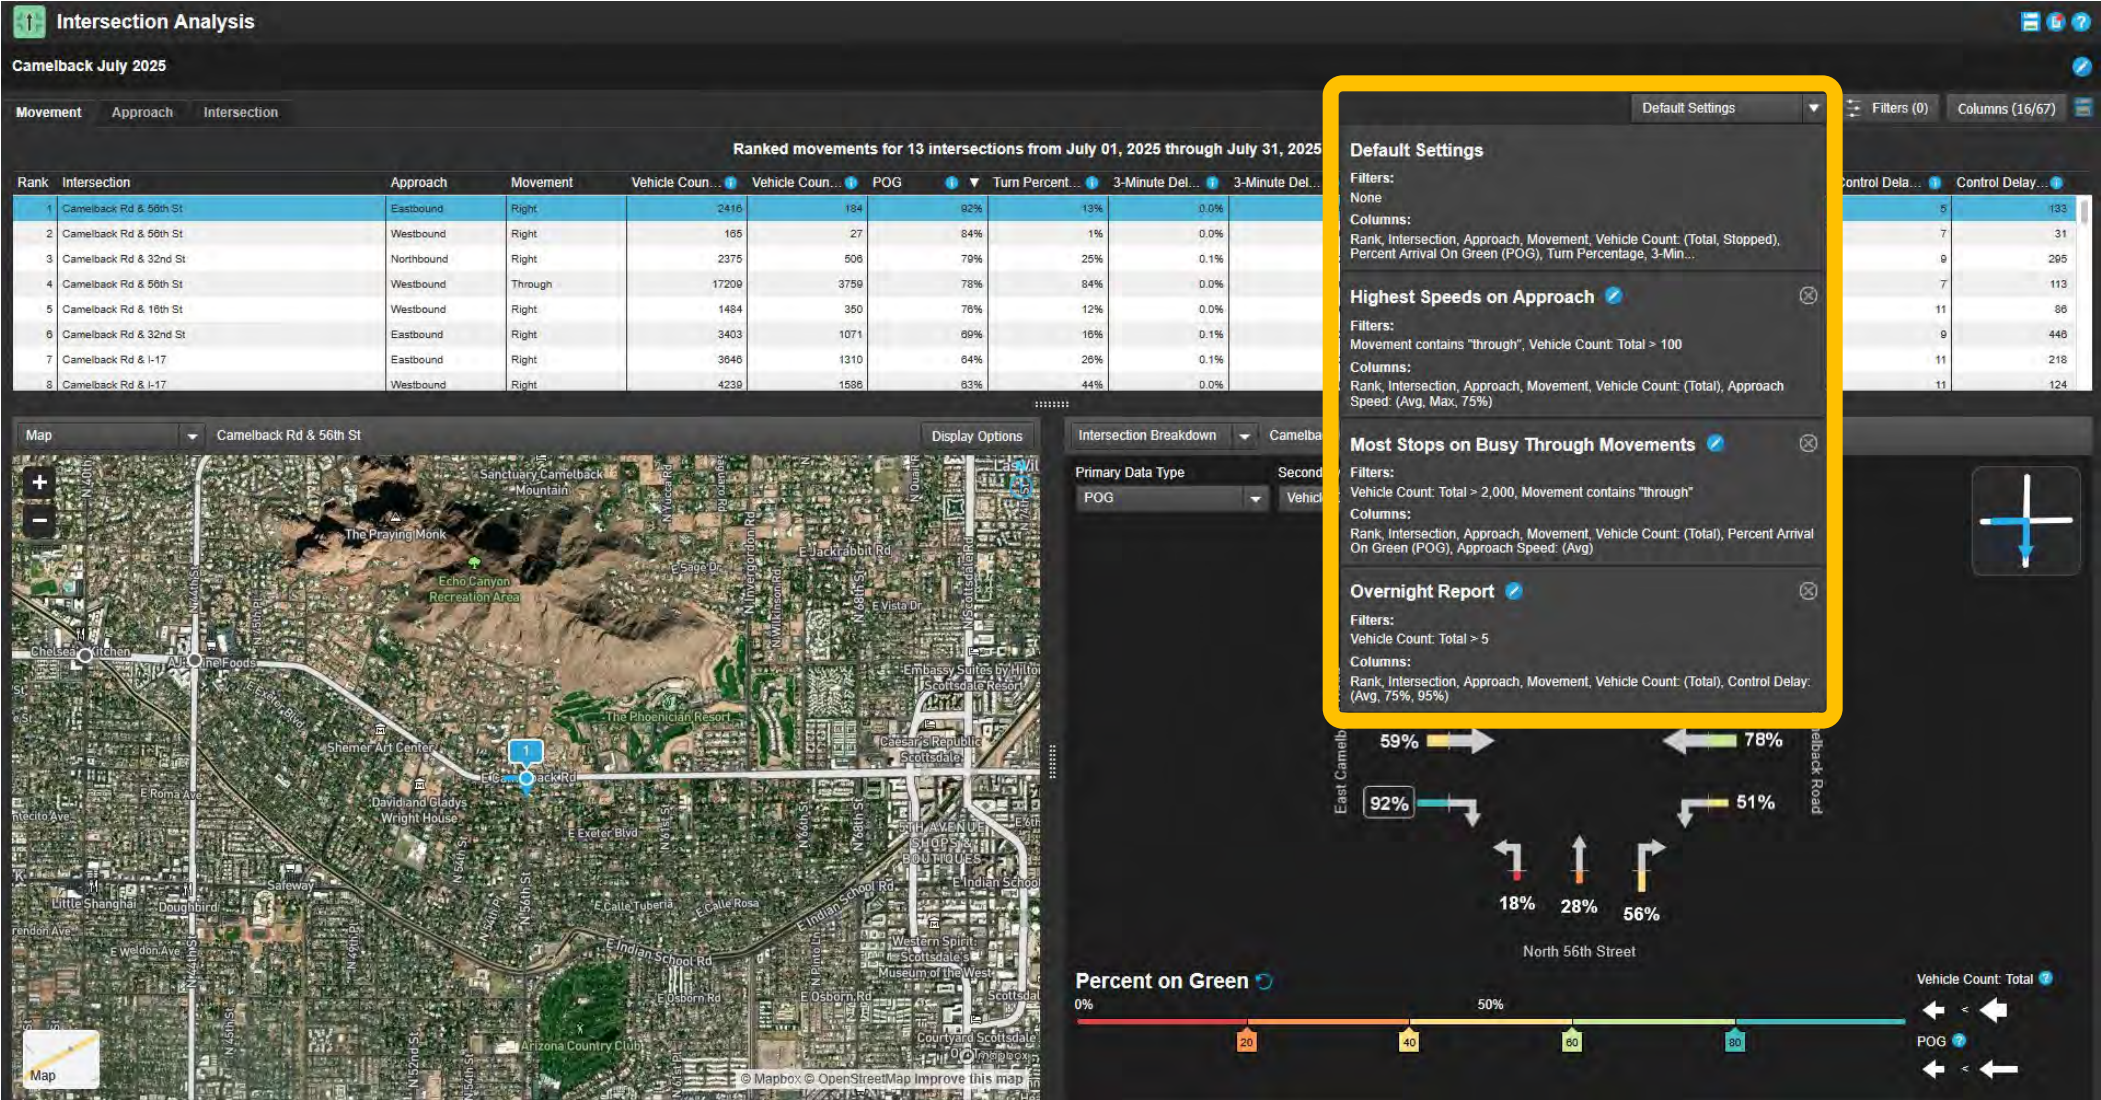

Use case: Most Stops on Busy Through Movements

- To achieve good progression, it's good to monitor the arrival on green performance of your busiest movements.
- **Query settings:**
 - Most recent two weeks of data
 - Weekdays
 - 7:00 AM – 7:00 PM
- **Filters to include:**
 - Vehicle Count: Total → Greater than 2,000
 - Movement → Contains through

- **Results**
 - Look for the lowest percent on green (POG). Is it below 40%?
 - Ask yourself: “Could I improve offset optimization?”

Intersection Analysis: Custom Presets

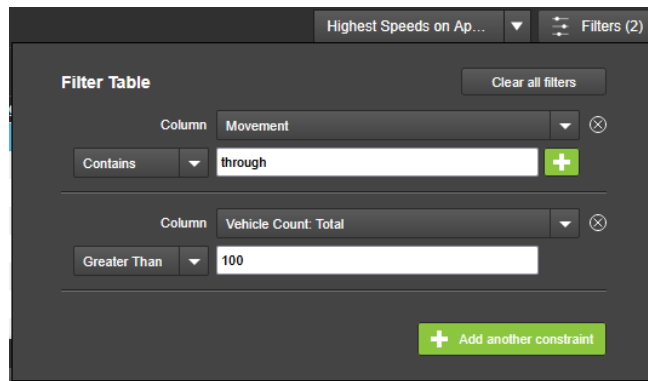

Intersection Analysis: Custom Presets

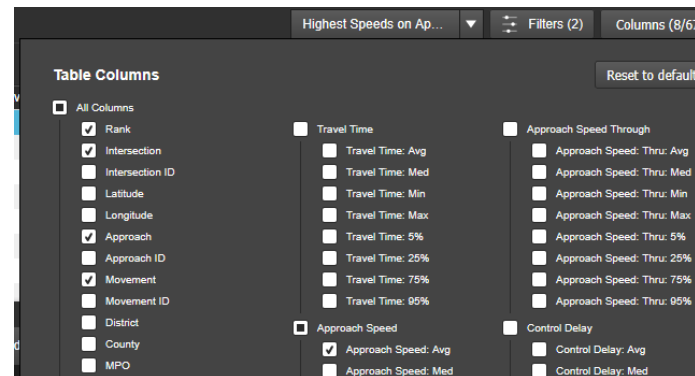

Note: all presets are user-created—here's how to build your own.

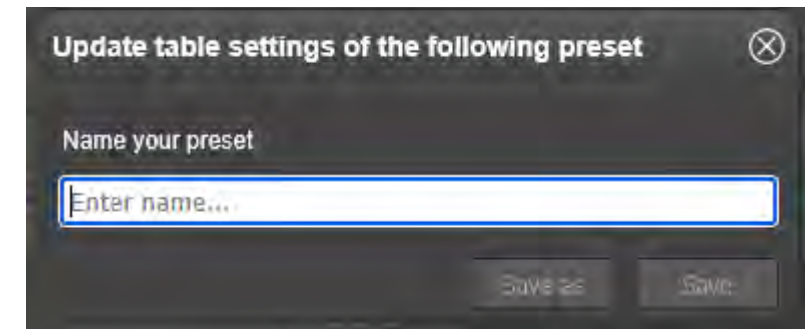

Step 1: Apply filters (optional)

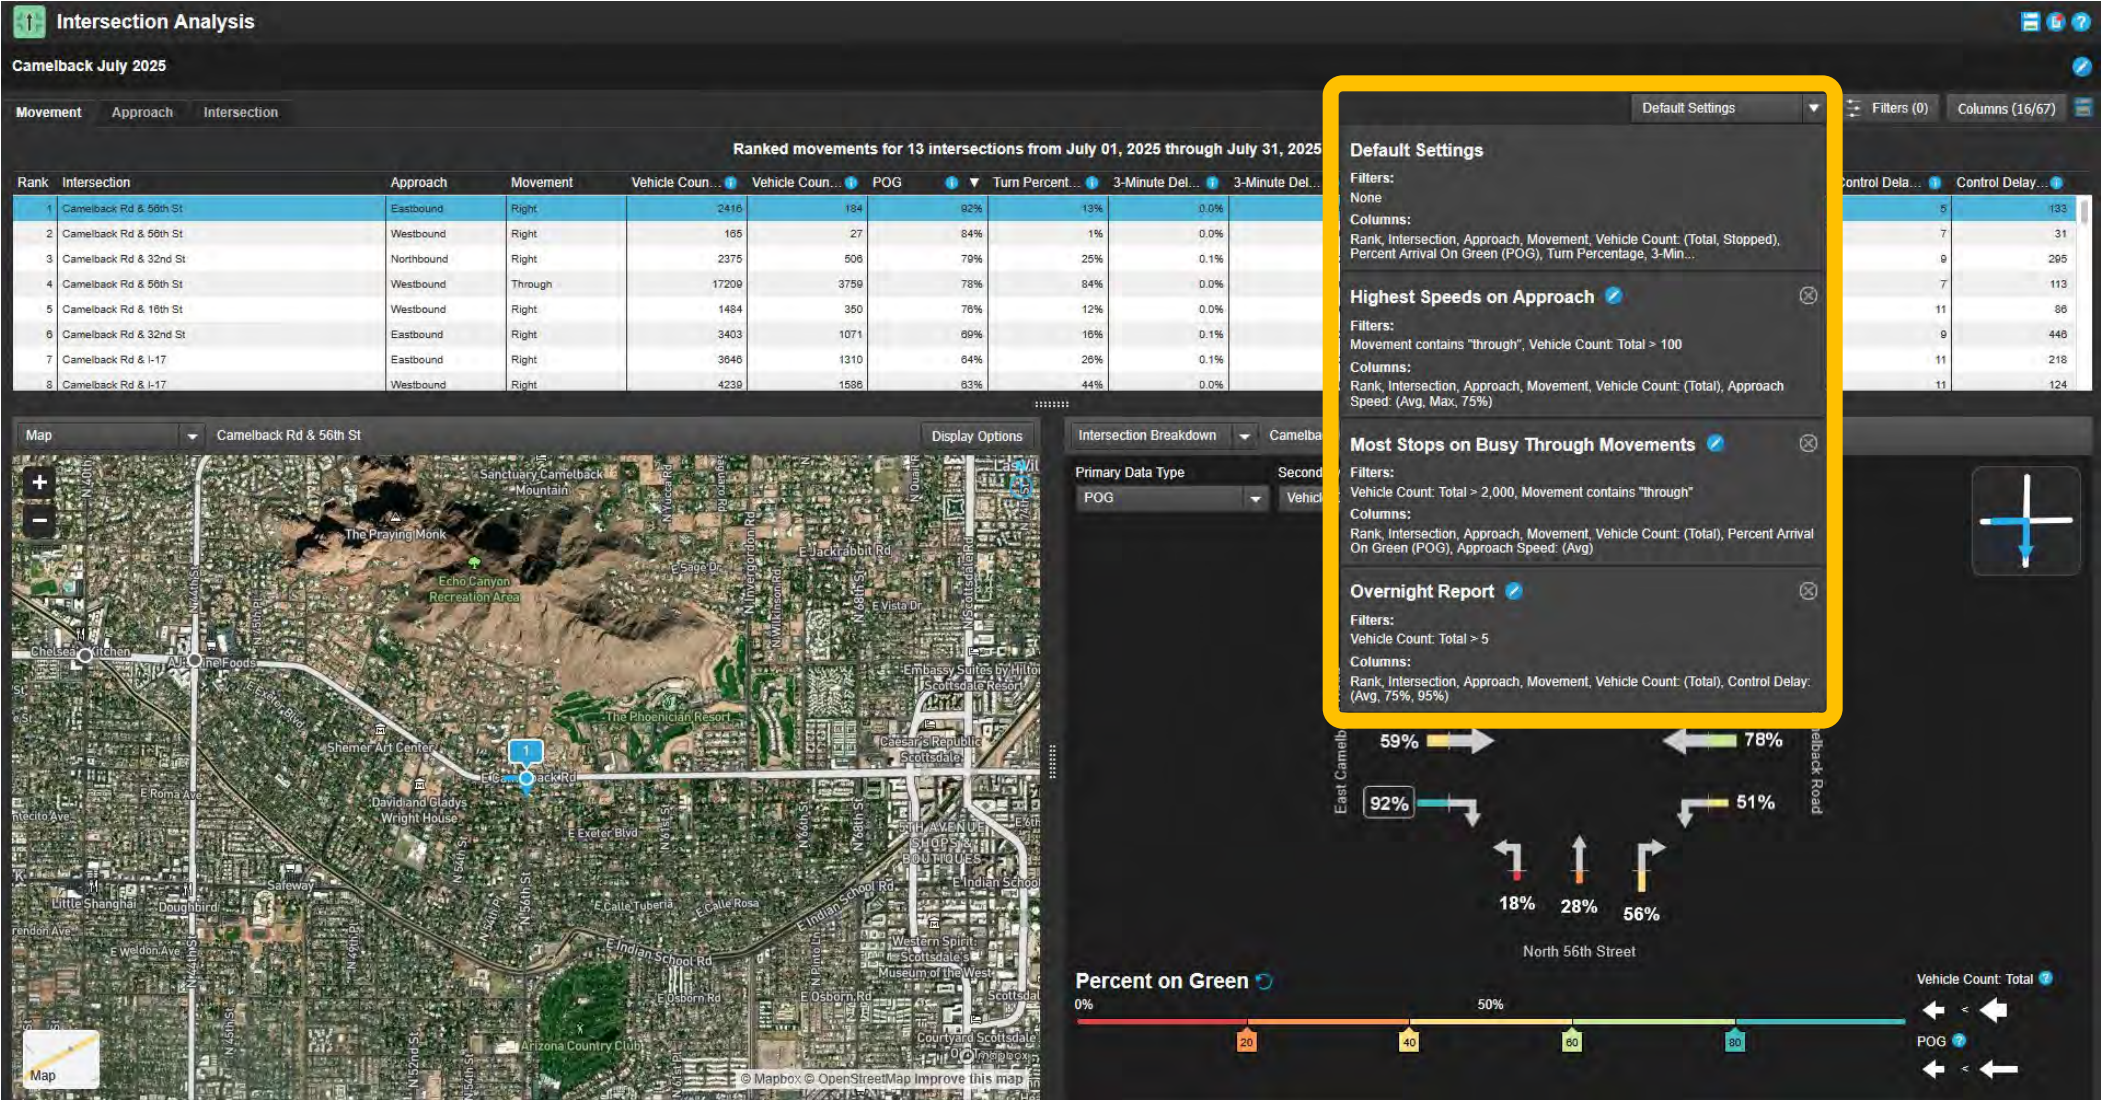

Step 2: Choose columns

Step 3: Save preset

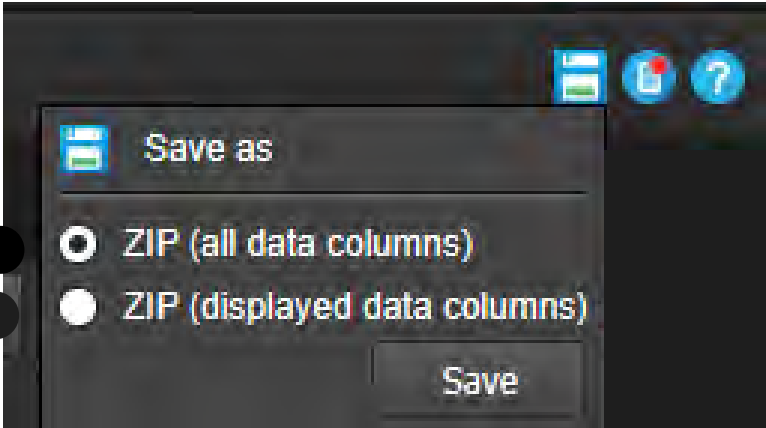

Intersection Analysis: Custom Presets

Intersection Analysis: Exporting Data

Exporting all data columns (Good for offline data discovery)

Intersection	Approach	Movement	Vehicle Count	Percent Arrival On Green (POG)	Approach Speed	...
4 Camelback Rd & 56th St	Westbound	Through	17209	78.157	38.300	...
15 Camelback Rd & 56th St	Eastbound	Through	16268	58.889	35.590	...
17 Camelback Rd & I-17	Northbound	Through	2990	56.288	43.242	...
21 Camelback Rd & 16th St	Westbound	Through	9182	55.075	29.213	...
24 7th St & Camelback Rd	Eastbound	Through	12444	54.5	32.250	...
31 Camelback Rd & 40th St	Westbound	Through	21130	50.596	32.640	...
33 7th St & Camelback Rd	Southbound	Through	6514	49.386	30.015	...
34 Camelback Rd & 35th Ave	Eastbound	Through	9435	49.2	32.800	...
39 Camelback Rd & 25th Ave	Westbound	Through	8816	47.474	35.030	...
65 19th Ave & Camelback Rd	Westbound	Through	11386	37.362	27.437	...
66 Camelback Rd & 24th St	Southbound	Through	4222	36.689	28.297	...
67 7th Ave & Camelback Rd	Eastbound	Through	9828	36.6	25.140	...
68 Camelback Rd & 24th St	Northbound	Through	4408	36.366	26.989	...
70 Central Ave & Camelback Rd	Eastbound	Through	10876	36.089	31.085	...

Exporting displayed data columns (Good for regular reports)

Rank	Intersection	Approach	Movement	Vehicle Count: Total	Percent Arrival On Green (POG)	Approach Speed: Avg
4	Camelback Rd & 56th St	Westbound	Through	17209	78.157	38.300
15	Camelback Rd & 56th St	Eastbound	Through	16268	58.889	35.590
17	Camelback Rd & I-17	Northbound	Through	2990	56.288	43.242
21	Camelback Rd & 16th St	Westbound	Through	9182	55.075	29.213
24	7th St & Camelback Rd	Eastbound	Through	12444	54.5	32.250
31	Camelback Rd & 40th St	Westbound	Through	21130	50.596	32.640
33	7th St & Camelback Rd	Southbound	Through	6514	49.386	30.015
34	Camelback Rd & 35th Ave	Eastbound	Through	9435	49.2	32.800
39	Camelback Rd & 25th Ave	Westbound	Through	8816	47.474	35.030
65	19th Ave & Camelback Rd	Westbound	Through	11386	37.362	27.437
66	Camelback Rd & 24th St	Southbound	Through	4222	36.689	28.297
67	7th Ave & Camelback Rd	Eastbound	Through	9828	36.6	25.140
68	Camelback Rd & 24th St	Northbound	Through	4408	36.366	26.989
70	Central Ave & Camelback Rd	Eastbound	Through	10876	36.089	31.085

Ranked movements for 13 intersections from July 01, 2025 through July 31, 2025

Rank	Intersection	Approach	Movement	Vehicle Count	POG	Approach Speed
4	Camelback Rd & 56th St	Westbound	Through	17209	78%	38
15	Camelback Rd & 56th St	Eastbound	Through	16268	59%	36
17	Camelback Rd & I-17	Northbound	Through	2990	56%	43
21	Camelback Rd & 16th St	Westbound	Through	9182	55%	29

Signals Templates: under development

Check for low progression with the Most Stops on Busy Through Movements report

Purpose: If you're trying to achieve good progression, it's good to monitor the arrival on green performance of your busiest movements. This report focuses on the busiest movements and lets you see if they are lagging behind.

Building your query

Date range to analyze:

- Select at least the most recent two weeks of data
- Four weeks will give you the most data to work with

Organizing your report

Columns to include:

- Rank
- Intersection
- Approach
- Movement
- Vehicle Count: Total
- POG
- Approach Speed: Avg

Tip: After you have set the preset, such as "Most Stop", apply this preset from the drop-down.

Exporting your results

You can use the "Save as ZIP" option to export your on-screen data table to CSV files for offline analysis.

What to look for

- Sort the table by POG, (descending)
- Look for the lowest POG movements with POG below 50%
- How does the volume at these intersections compare to other intersections? Is there an opportunity for improvement?

Check for excessively high speeds with the Highest Speeds on Approach report

Purpose: Speeding, especially accelerating through yellow intervals, can be a problem in areas with high approach speeds. This report helps you to confirm that you have appropriate intervals or consider implementing measures to discourage speeding, like variable message signs, which can also be useful for correcting crash patterns.

Building your query

Date range to analyze:

- Select at least the most recent two weeks of data
- Four weeks will give you the most data to work with

Organizing your report

Columns to include:

- Rank
- Intersection
- Approach
- Movement
- Vehicle Count: Total
- POG
- Approach Speed: Avg

Tip: After you have set the preset, such as "Highest Speeds on Approach", apply this preset from the drop-down.

Exporting your results

You can use the "Save as ZIP" option to export your on-screen data table to CSV files for offline analysis.

What to look for

- Sort the table by Approach Speed: Avg, (descending)
- Look for average approach speeds that exceed the speed limit.
- Look at Approach Speed: Avg
- In your engineering judgment, are these values unexpectedly high? If so, you may want to check the deflection on these movements

Check for possible stuck detection or other overnight issues with the Longest Delays Late Night report

Purpose: During the middle of the night, we expect traffic flow to be light on the major approaches. Because of this, if the signal is running free and if detection is working properly, we expect all movements to be served frequently. If we see long delays, this could be a symptom of stuck detection or could simply be an opportunity to make the late-night timing snappier.

Building your query

Date range to analyze:

- Select at least the most recent two weeks of data
- Four weeks will give you the most data to work with

Days of Week

- Weekdays Only

Time of day

- 12:00 AM - 5:00 AM

Organizing your report data

Columns to include:

- Rank
- Intersection
- Approach
- Movement
- Vehicle Count: Total
- Control Delay: Avg
- Control Delay: 95%
- Control Delay: 99%

Filters to include:

- Vehicle Count: > 10
- Movement: > 10
- Control Delay: > 10

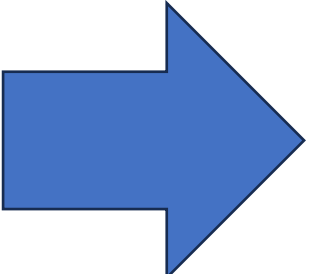

Tip: After you have set the columns and filters to your liking, you can save these settings as a preset, such as "Longest Delays Late Night." Next time you run your report, you can apply this preset from the drop-down.

Exporting your results

You can use the "Save as ZIP" option to export your on-screen data table to CSV files for offline analysis.

What to look for

- Sort the table by Control Delay: Avg, (descending)
- Look for control delay values above 45-60 seconds
- In your engineering judgment, are these values unexpectedly high? If so, you may want to check the deflection on these movements

Templates

This template gallery provides performance reporting examples you can download and use - with output from RTIS tools and your own content - to create professional, easy to understand reports. To get started, click on any of the report icons below to learn more about each type of report, how they were created and access a fully editable PowerPoint™ template file.

CORRIDOR PERFORMANCE REPORT

Create a report that describes the performance of a corridor over a selected time periods (quarterly, yearly) and compares that performance with previous periods.

MONTHLY CONGESTION REPORT

Create a monthly report that describes the performance of a roadway over the previous 12 months.

PROJECT ASSESSMENT REPORT

Create a report that describes the performance of a roadway or corridor before and after an operational or capital improvement project.

TOP 10 BOTTLENECKS REPORT

Create a report that summarizes the top 10 bottlenecks in your area.

AFTER ACTION REVIEW

Create an after action review of a major incident.

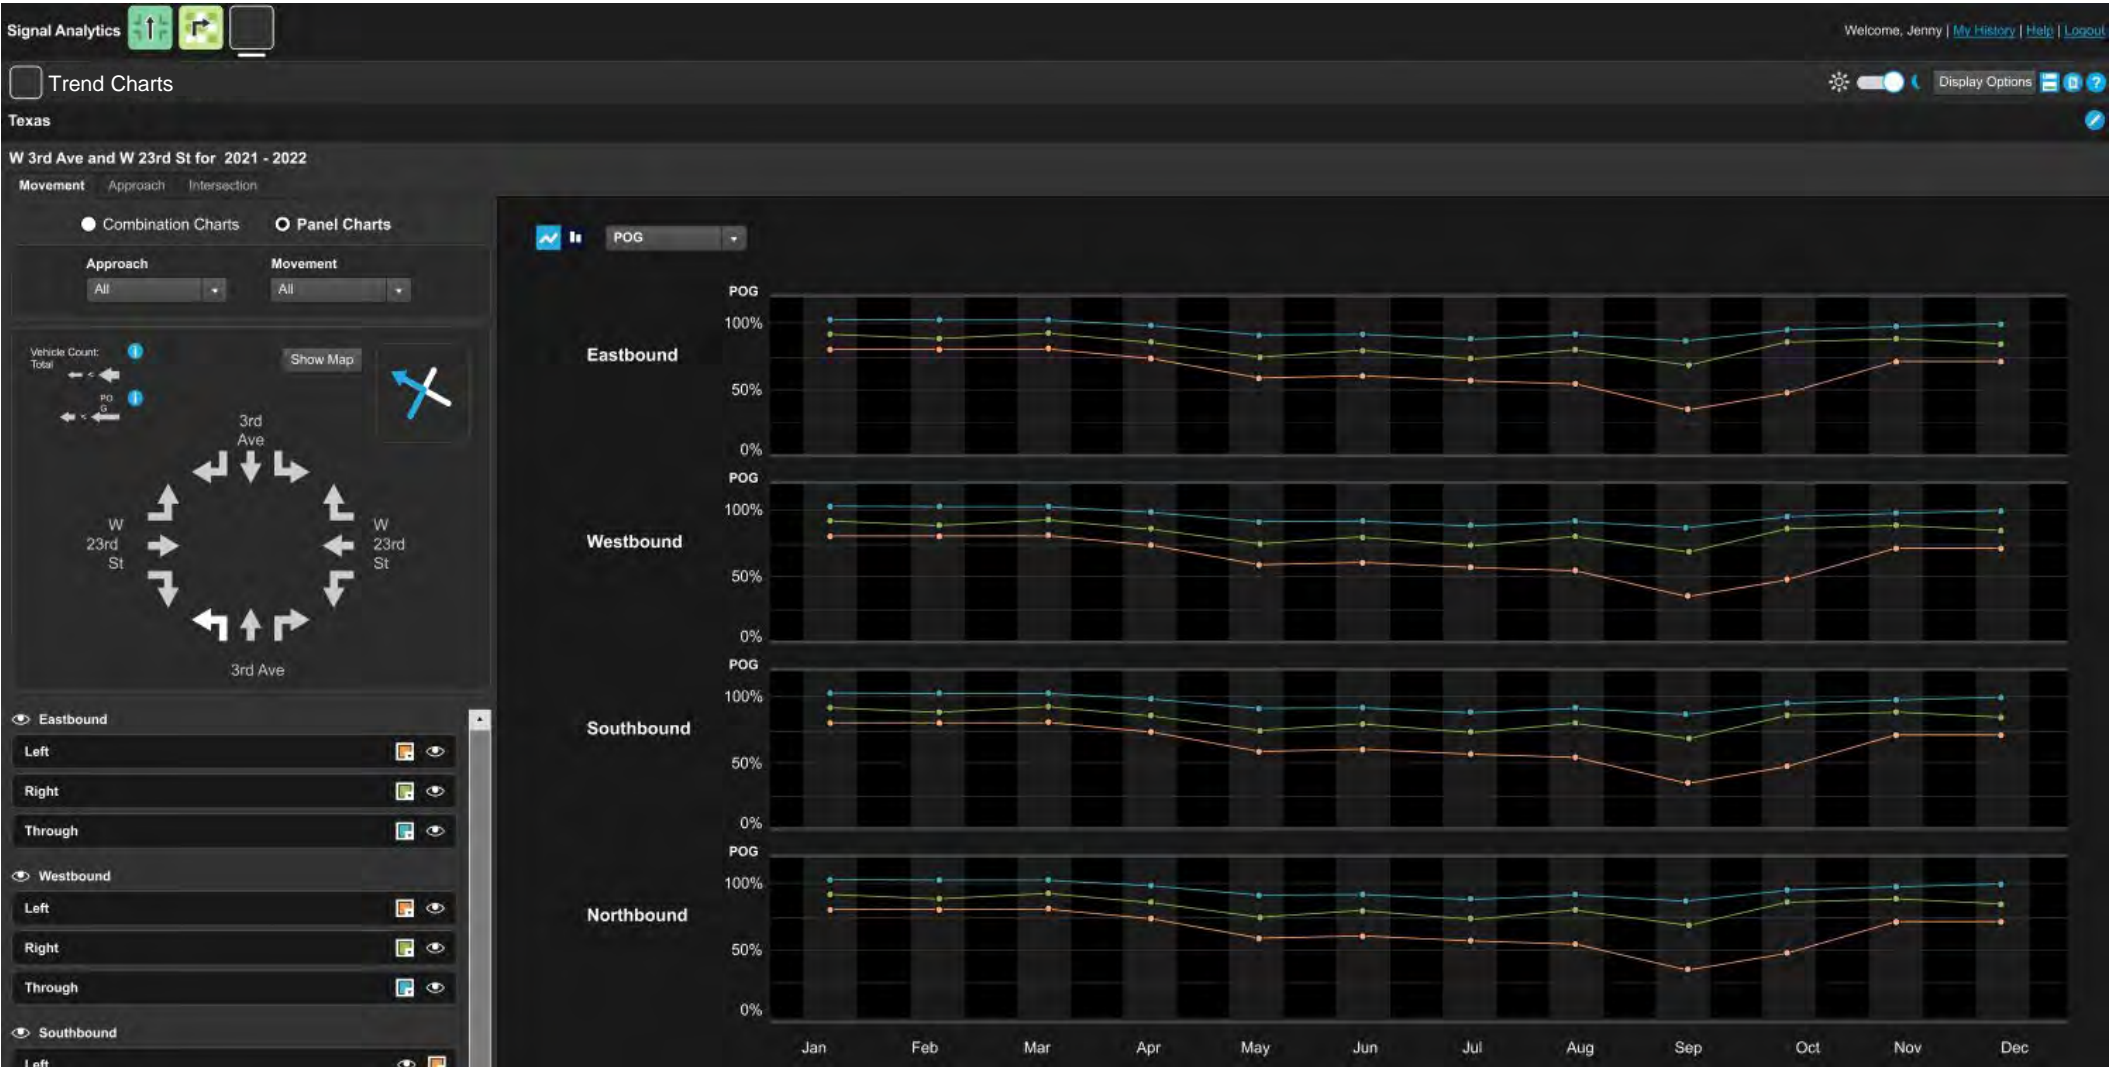

HOLIDAY TRAVEL FORECAST

Create an infographic that predicts holiday travel conditions.

User Feedback Session, Q/A & Wrap Up

Michael Pack
Director
UMD CATT Lab

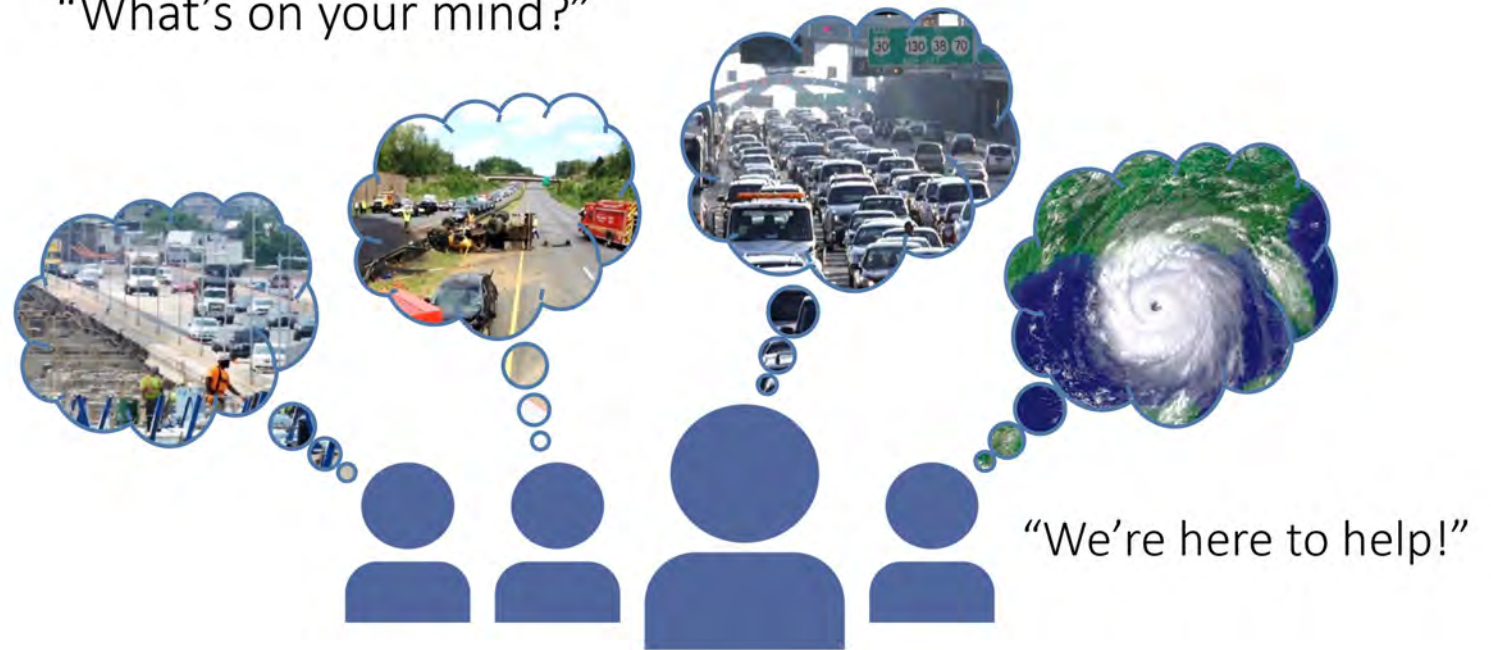

Jesse Buerk
Associate Director, Office of Capital Programs
DVRPC
RITIS User Group Co-chair

We want to hear from you!

- All features and functionality are driven by state/MPO users.
- You are welcome to join any of our User Groups / Working Groups / Listening Sessions to brainstorm/define these new features and functionality.
- You can also type your comments to us today either in the Q&A box or with an email to support@ritis.org

“What’s on your mind?”

Agency Input – Polling and Open Discussion

Please type your answer under the question in the pop-up box.

Poll –

1. Is there any topic you would like to see added to a future User Group meeting?
2. Please provide detailed feedback on new features/capabilities you would like to see built out in the future.

Wrap Up

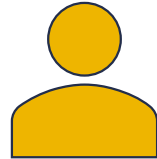

Jesse Buerk
